MACHINERY

EUROPEAN MACHINISTS IN CANADA.

THE point raised in a brief article in the last issue of "Hardware and Metal" is of peculiar significance to machinists, especially those who have come from Europe to take up their trade in Canada. It is but natural to infer, from even a casual observation of the labor situation, that Canada needs more machinists, as well as more machinery. Nothing is more natural than that some of the skilled artisans of the congested areas of Great Britain should make up their minds to "sail away," and embrace the opportunity that the expanding trade of the Dominion offers.

One correspondent has stated that if 1,000 skilled workers landed in Montreal at once, work could be found for them in 36 hours. Doubtless, this is all true, for if Canada needs men for the West, if Ontario farmers must perforce sit in impotent despair and watch their crops rot in the earth for want of the hired help that comes not, just as certainly is the machinery trade stagnating because skilled labor is so difficult to obtain.

Whether it be that the trades unions themselves are directly or indirectly responsible, or just how far individual prejudice is accountable, it is hard to say, but the fact remains that European machinists, coming to Canada, meet with a hostility at the hands of those whose better policy would be to hold out the hand of welcome, and a hostility, forsooth, that is almost worthy of an uglier name.

In one of the machine shops of Toronto recently, an English mechanic applied for work. He was quite prepared to take up duties that were usually performed by unskilled hands until he "got into the way of things." It did not take the foreman of the shop many days to discover that this man was a thoroughly experienced machinist, and as several machines were standing idle he was put to work on a drill. This was in the morning; at noon, the helpers among whom he had worked, objected to his advancement, and in face of the moulders' strike then obtaining, the foreman had no choice but to remove him. Fortunately, his experience was not confined to drills, and he was placed in a better position subsequently.

A Toronto machinist, toolmaker and electrician advertised for a skilled mechanic, but no Canadian machinist was wanting a situation. Believing he might secure the services of one of the men who, he was advised, were coming out from Europe, he endeavored to intercept them at the Union Depot, and finally managed to effect his purpose. Such pressure, however, was brought to bear on this innocent transgressor, who hailed from the Motherland, that he was hustled off to the States; the employer referred to is thoroughly convinced that the Canadian machinists are against importing skilled help, even though the demand remaining unsupplied is crippling the industries of the Dominion.

There is more in this question than a passing comment on the slender thread that binds employer and employe together, a thread so frail that either party can break it at will, though agreements for stated periods have been signed, sealed, and settled.

There are many things a Britisher has to learn when he comes to Canada; there are just a few things, too, of which the Canadian machinist is not too certain. But, whatever be the cause of this miserable policy, if, indeed, it may be dignified by so august a name, it is unworthy of the spirit of Canadian enterprise. We are not yet so strong in skilled workers of any craft in this country that we can expect to reap benefits from exclusion of those who, at least, know some things well, and this selfishness on the part of our artisans is but retarding the natural growth of our great country.

To get right down to the data of the proposition, whether we admit it or not, the dearth of skilled machinists is real; the inability of Canada to supply the want in anything like an adequate measure is still more real. Help is needed, and not all the unions, not all the "sweating" employers in the world, will prevent help coming from some source. Why, then, should not the shops of the Dominion take some of the surplus European skilled labor? Why should not the machinist of our country force himself to believe what is really the truth, that he does not know all that can be known, and that his skill is not the end-all and the be-all of the machinery trade, nor yet of commercial economics?

The bogey that has been set up for the worship of the artisan, of trade "protected" by limited output, should be once and for ever destroyed, for no policy could be more disastrous to our country at this period of its rapid development than that of exclusion of the skilled labor that is so much needed.

B.

ECONOMIC GAS POWER.

THE Loomis-Pettibone Gas Machinery Company have increased their capital to $2,000,000, in order to fully equip their new works at Elizabeth, N.J. Up to the present time the company have not turned out large gas engines of their own make, but have represented in North America the firm of Crossley Brothers, of Manchester, England, who have carried the construction of gas engines in large units to a higher point of efficiency than American firms. In a very short time, however, the Loomis-Pettibone Co. will put on the market an improved gas engine of their own design, possessing special features.

Gas engine plants are gaining favor in the States, and installations of from 700 to 1,000 h.-p. have recently been erected by the company for the Winchester Repeating Arms Co., New Haven, Conn.; Detroit Copper Mining Co., Morenci, Arizona; Minas Tecolotes Y Anexas, Chihuahua, Mexico, and the Montezuma Copper Co., Nacosari, Mexico.

A 2,000-h.-p. plant is in course of construction at the Velardena Mining Co.'s works, Durango, Mexico, consisting of an ore concentrating mill, pumps and hoists. The company's gas-producing process results in a consumption of 2½ lb. of wood, or 1 lb. of bituminous coal, per brake h.-p., and the economic production of power under all conditions with such installations is therefore apparent.

TO ERECT A FACTORY IN CANADA.

The Thresher Electrical Machinery Company, of Dayton, Ohio, are seeking a suitable site for a Canadian factory. Mr. A. A. Thresher, the president of the company, was in Brantford recently, and though he would not state definitely what his company would do, he was highly pleased with the town, and will return in a short time to look over the ground more carefully. Dr. S. Ritter Ickes has had much to do with inducing Mr. Thresher to consider the advantages offered by Brantford.

PNEUMATIC TOOLS.

PNEUMATIC tools are a desideratum in every modern machine shop, and in most up to date establishments the air compressor is considered a necessity. There is very little difference in price between the common or garden type of air compressor and the best, and the Christensen air compressors, a product of Milwaukee, sufficient to establish that city's fame among machinists had not a more liquid product already given it notoriety, are in the front rank of compression machines. The chief claims of the Christensen engines are automatic lubrication, dust proof bearings, interchangeable suction and discharge valves, and solid construction. These compressors are commonly used for blowing out dust from generators and motors, printing presses, carpets, etc., and in connection with air brakes for electric cars.

The "Kotten" pneumatic tools and appliances for carving, lettering, drilling and surfacing all kinds of stone are among the latest and most economical tools on the market, and are used all over the world. They are made by H. G. Kotten, No. 120 Liberty street, New York.

MACHINERY NOTES.

THE large C.P.R. warehouses of North Bay, Ont., are to be wired for light by The Chippawa Electric Co.

Raney & Wouters have been appointed agents in Moosoomin, Assa., for The Port Huron Engine and Threshing Co.

A water wheel is being installed by Mr. Burnett, contractor, for the Peterboro' lock, to drive the machinery used in the construction of the dam.

The Breithaupt Leather Co., of Listowel, Ont., have recently lost their engine, bank mill, a large portion of their machinery and a part of the premises in which these were contained by a disastrous fire.

The Colonial Portland Cement Co., of Wiarton, Ont., are making rapid progress with their works, and the town council are about to improve their water system and start a sewerage plant.

The Summerside, P.E.I., Electric Light Co. are enlarging their premises to make room for a new engine, equal in power to the two already in use.

It is expected that the new dam to be erected by The Montreal Light, Heat and Power Co., with all the turbines and machinery, will be completed within 16 months.

The Rainy River Navigation Company are to have another new palatial steamer for the Rat Portage and Fort Francis service. The new boat will be of modern type, and will be built by The Bertram Engine and Shipbuilding Co. of Toronto.

The Stevens Arms and Tool Co., Chicopee Falls, Mass., have issued an artistic brochure on the "Stevens-Duryea Gasoline Carriage." The cuts are excellent, and the booklet contains many valuable hints to those who ride the speedy chariot, particularly the Stevens-Duryea.

The Montreal District Council of the Brotherhood of Carpenters and Joiners have decided to establish a co-operative sash and door factory. Already $2,000 stock has been subscribed, four working carpenters in one shop subscribing $500, and a suitable location has been offered, with building and plant all ready to start business as soon as the co-operative institution is an established fact.

The building of The Northern Iron Works, Winnipeg, which was destroyed by fire recently, is being rebuilt, and will very shortly be completed.

Arrangements have been made by W. R. Ross, of The Goldie & McCulloch Co., Limited, Galt, Ont., with Alexander & Law Bros. Brandon, Man., for the installing of machinery, in order to double the capacity of that company's mill. The building, as it now stands, is large enough to accommodate the new machinery, but another electric motor will be put in.

The contract for the installation of The Nova Scotia Steel and Coal Co.'s water system has been awarded to McDonald & Sutherland.

The Canada Corundum Co., at Craigmont, Ont., proposes to increase the capacity of its plant from 20 tons per day to 200 tons.

It is reported that Coward & Son, of Fernie, B.C., will erect a fully-equipped planing and moulding plant of great capacity at Elkmouth in the near future.

B. F. Pearson, Halifax, N.S., on behalf of The Newfoundland Timber Estates Co., has purchased from Lewis Miller, Grieff, Scotland, 3,000 square miles of timber along the Reid Railway. The company intends to establish eight sawmills, and, in addition, to undertake the manufacture of pulp on a very large scale.

THE "SOO" WORKS PROGRESSING

The manufacture of steel rails at Sault Ste. Marie, Ont., will be started in July, the president, Cornelius Shields, of The Consolidated Lake Superior Co., expects. Already two blowing furnaces have been completed, and the machinery for the completion of the other two is on the ground. Mr. Shields states that the company have closed contracts this year to send nearly 500,000 tons of ore from the Helen mine into the States, supplying different companies as far south as Virginia. He says the ore, which is of a particular nature, mixes splendidly with other ores for the manufacture of the highest grade of steel rails. This year the company are unable to supply anything like the demand, but Mr. Shields thinks that by next year the company will be in a position to supply all demands.

NEW LIST ON HANDLES.

AT a recent meeting of the Canadian handle manufacturers a number of changes in the list prices were made. The new list is as follows :

3½ ft. strait 2nd-growth fork handles.	$2.40 extra, 3½ ft. $2.10
4 " " " "	2 40 " 4 ft. 2.10
4½ " " " "	2 80 " 4½ ft. 2.40
5 " " " "	3.15 " 5 ft. 2.70
5½ " " " "	3.50 " 5½ ft. 3.05
6 " " " "	3.85 " 6 ft. 3.35
3½ ft. bent 2nd-growth fork handles.	$2.80 extra, 3½ ft. 2.50
4 " " " "	2 80 " 4 ft. 2.50
4½ " " " "	3.15 " 4½ ft. 2.80
5 " " " "	3.50 " 5 ft. 3.10
5½ " " " "	3.85 " 5½ ft. 3.50
6 " " " "	4.25 " 6 ft. 3.85
5 ft. garden rake handles, extra	1.85
5½ " " "	2.10
6 " " "	2.30
4½ ft. hoe handles	1.55
4 ft. manure fork handles, extra	2.40
4 " " bent, extra	2.90
4 " " second growth	2.70
5 " " " bent	3.30
Short manure handles, second-growth	1.00
" " " " bent	1.85
Short shovel and spade handles, bent	2.20
4½ ft. " " "	2.80
4½ " " bent	4.05
5 ft Cornish shovel handle, bent	4.85
6 ft. post hole spoon handle	4.10
Select second growth hickory, 36 in.	5.00
Ext hickory, machine turned, Octagon	Cancelled.
Add second growth hickory, 32	4.00
" " " 30	3.50
Add No. 1 hickory, 34	3.00
Ext. 36, 38, 40 ..... Cancelled.	
No. 1 hickory, 36	3.00
dd maple axe handles, 34 and 36	1.80
" " " 32	1.60
A" " " 30	1.50

Revised classification second growth. All first-class timber admits of a little red timber.

Ext. H.S., boys, 28 in.	$2.25
No. 2, 32 in. boys' axe handles	1.60
Ext. H. S. cancelled.	
Ext. double bit handles changed to No. 1, 36 in.	2.50
" " " 1, 38 in.	2.75
" " " 1, 40 in	3.00
2nd gro. hick., large bench and hunters axe handles	1.50
" small " " "	1.30
No. 2 grade Hickory, 26 in. pick handles	1.50
" " 38 in. "	1.75
" " 40 in. "	2.00
Second growth ash lorrie neck yokes, 4 feet length	7.75
" " " ordinary length	6.50
Selected ash whiffletree, 3x36, round or oval	4.50
" " or oak whiffletree 2¼x36, round or oval	4.00
" " buggy " round, 1⅛ or 2x40 or 42	3 75
" hickory " " " "	4.00
Extra " " " " " "	4.00
Second growth hickory cant hook handles, cancelled.	
Firmer chisel handles applewood, and firmer socket chisel handles, applewood	Cancelled.

It will be noticed from the above that extra axe handles have been cut out of all classes except boys', and, in fact, out of the first grade of boys' axe handles, which is now known as "X" grade, and that is followed by Nos. 1, 2 and 3. In men's axe handles the first grade is now "Second Growth," and the second grade is "No. 1." The list price of No. 1 in the 34 and 36-inch has been advanced 40c. In second growth, 34-inch is 50c. higher, 36-inch remaining unchanged. In double bit axe handles the only change made is that "Extra" grade is now listed as "No. 1."

The list on second-growth and extra fork handles, straight or bent, has been advanced 30c. per dozen in 4, 4½ and 5-foot ; and in 5½ and 6-foot the advance is 35c. per dozen. Other changes are an advance of 20c. in 5-foot garden rakes, extra ; an advance of 15c. in 4½-foot hoe, extra ; 30c. in second-growth, 4-foot manure fork, extra ; 10c. in short manure handles ; 30c. in short shovel handles, bent ; 30c. in 4½-foot shovel or spade, and 35c. in 6-foot spoon.

Will Hold Up a Shelf!

That's what a shelf bracket is for.

For this purpose there can be NOTHING BETTER, NOTHING CHEAPER than the BRADLEY STEEL BRACKET. It is well Japanned, Strong and Light. The saving in freight is a good profit, aside from the lower price at which the goods are sold. Order direct or through your jobber.

Window and Interior Displays

Timely Hints and Suggestions.

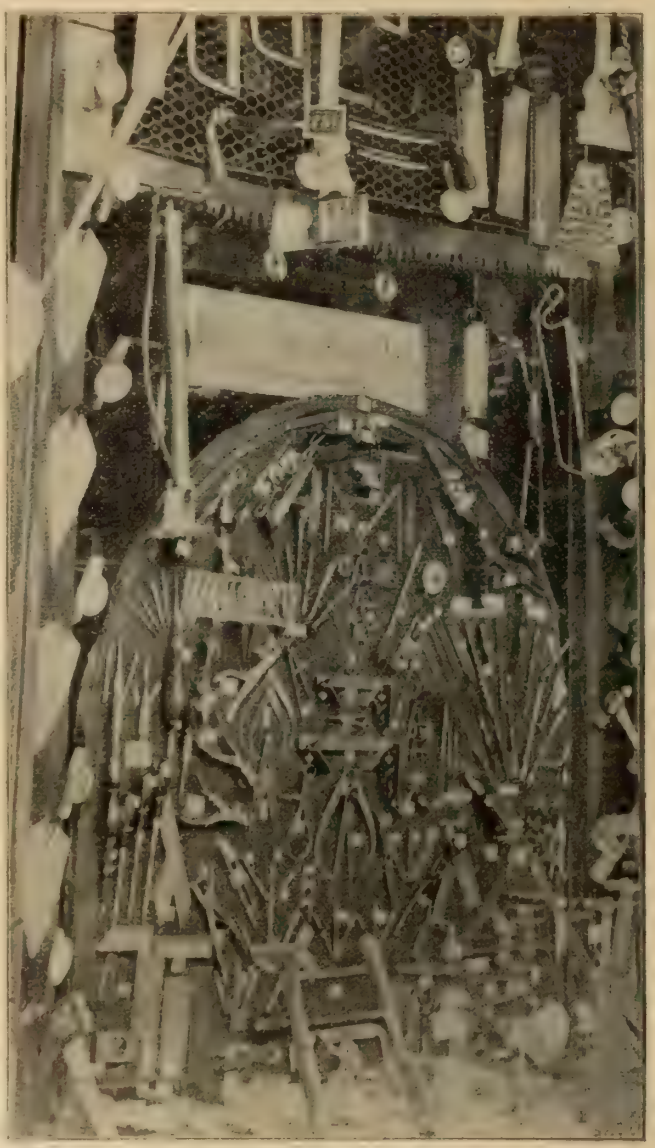
SINCE the increase in interest aroused in the window dressing of hardware stores of late the great fault in most efforts has, of course, become more prominent. It is surprising to find that the majority of merchants appear to consider the best window the one that contains a complete catalogue, as it were, of the contents of the store. In their zeal, they fear that what is not shown in the window will not be sold, and, consequently, every nook and corner is crowded with a complete hardware stock, from nails to lawn mowers.

The intentions are good, and the appreciation of the value of the window for selling goods is one great point in his favor and shows a step forward. But the idea that what he wishes to sell must be displayed each time is a mistake, and the results from such a window, be it ever so carefully arranged, will be only one degree more satisfactory than the poorly arranged window. Not only is the effect spoiled by such a motley aggregation, but the true purpose of a window display is not fulfilled. Specialties are the materials for window decoration and specialties it should always be. By this I do not mean necessarily a new line of goods or a bargain lot, although these occupy a prominent position in window subjects, but also seasonable lines, and particularly the confinement of the display to one line.

For instance, sporting goods and carpenters' tools scarcely go side by side, and yet such ill-timed arrangements are not unusual. The articles in a window should all be related to some extent, as far as is possible. One window may contain sporting goods, another carpenters' tools, another gardeners' needs, another barn and stable requisites, and so on, but these should always be separate and confined to their own windows.

BOARDS FOR SMALL TOOLS.

One of the methods employed for displaying small tools is the use of boards of different shapes covered with a colored material, such as green baize, and the tools fixed on this in different arrangements. Great variety is possible, and the accompanying cut of a window gives some idea of a completed board on which carpenters' tools have been arranged. Better designs than those shown on the board can be easily thought out. The only points to be remembered are the use of only one line of goods and the placing together of the same articles. Different geometrical designs can be formed by placing together in one place bits, in another compasses, in another chisels, in another rules, and so on through the list.



An Attractive Tool Window.

The boards can be made of any size and shape to suit the articles to be shown. The baize or other material employed is then covered tightly over it, and the articles are fixed on by the use of screw hooks in the required position. These boards can be used repeatedly, and are of great service in the store for showing to a customer the different qualities or kinds of a certain article.

SOME WINDOWS SEEN THIS WEEK.

In Tillsonburg the hardware merchants are fully alive to the importance of window dressing. One novel window recently appeared in the store of W. R. Hobbs. The floor of the window was sodded with nice, fresh grass, and in the centre was a sparkling miniature fountain throwing its spray around. Here and there on the grass, as though dropped by the gardener, were a lawn rake, watering cans, a garden hose, grass clippers, grass cutters, etc. The window looked so fresh and clean that one was compelled to stop and look at it, and the novelty of the design attracted many eyes that would have missed an ordinary display.

A Toronto window was also filled with the necessaries for a gardener, from hoes and spades to lawn mowers. Everything needful to a well-trimmed lawn had its place in the display.

DISHONEST CUSTOMERS.

A large department store in Chicago has placed a rather low estimate on the honesty of its customers.

In several departments all portable goods are fastened to the counters and are displayed at the end of a chain to prospective buyers. Some people might resent the distrust that this method implies, but the customers of the store in question seem to take it as a matter of course.

SPECIALIZING AND DEPARTMENTALIZING.

THERE is always some objection on the part of the majority of retailers, hardware dealers among them, to branch out into other lines than they are carrying and which do not exactly come within the scope of their own trade. For instance, many a hardware merchant who supplies carpenters and other workmen with their tools could also do a business with them in overalls and other working clothes; but "that is entirely out of my line," he says, and he refuses to handle them.

This is not the way that the great city department stores were built up. The founders of these places sold whatever they could, and when they saw an opening to add a new line they stocked the goods and pushed them. Many of our best hardware stores are now being divided up into departments; that is, sporting goods are given a place to themselves, apart from the general hardware and in a conspicuous place in the store; kitchen requirements are allowed a section to themselves and are prominently displayed; plumbers' supplies, if they are carried, are made a special feature of—not given a dark corner in the store, a counter in the rear away out of sight of the customer, or a position so glaringly inferior to the other goods that the natural impression received is that but a very small and incomplete assortment is carried—but placed well to the front, as though the merchant was as much a dealer in plumbers' supplies, or kitchen requirements, or sporting goods, as he was in ordinary hardware.

The regular hardware articles, at any rate, will require much less store advertising than the special features. It is in this way that the most pushing hardware dealers are making progress side by side with the growth of other concerns, with the branching out of the department and mail order stores, with the business combines and all other features of the twentieth century which result in making it more and more difficult for the smaller merchant to do business.

"Kindred lines in the hardware trade," says one retailer, "are anything that can be added to an ordinary stock of hardware and nails, and can be sold at a profit, and will keep the expense of selling down." That any such lines are also the legitimate merchandise of the hardwaremen seems to be the idea of large retailers.

Cutlery is recognized now as part of every hardware stock, but there are stores doing a good business which carry little or nothing but cutlery. It is their specialty, and it pays. But cutlery can be made as important a specialty in a general hardware store as with these dealers. Sporting goods are not carried by all hardwaremen, but it is noticeable that they are making their way into a prominent position in many, both retail and wholesale, stocks. Guns and ammunition bring the hunters' trade. But the hunters also require clothing for the purpose (which is now supplied by some jobbers), tents, canoes, skiffs, fishing tackle and all sorts of camping outfits. Then, why not supply them?

Agricultural implements are, to a great extent, sold through agencies, but there are many articles, such as ploughs, wagons, hay forks, cultivators, seeders, etc., which can be profitably handled by hardwaremen doing a trade with farmers. Many hardware dealers also handle seeds, while others allow the druggist or the grocer to do this business.

The trade in kitchen supplies, stoves and enamelled ware opens the way to a host of household articles, in which the hardware merchant can do a profitable business. Why should not the householder be able also to purchase his crockery and glassware, lamps, gas fixtures, table silverware and even furniture from the hardware store? Lack of space and capital of course are the drawbacks; but it is not necessary to branch out in all these lines at once. Gradual additions can be made, and if they prove profitable—and they should if a careful selection is made—there will surely be no objection to acquiring more space and placing the business abreast of any other in the vicinity.

A HARDWARE PREMIER.

Premier Prior, of British Columbia, who, the other day, dismissed two of his Ministers because of alleged irregularities, is a wholesale hardwareman in Victoria.

While Minister of Inland Revenue in the Dominion Government he administered the affairs of his department in a business-like way, and it is evident that he is applying to his position as head of the Government of British Columbia the same principles which would guide him in the conduct of his own business.

He has set a good example, which it is to be hoped will be followed by the other premiers in the country, whether provincial or Dominion, when members of their Cabinets are found to be neglecting their duties or abusing the privileges of their office.

CORDAGE HIGHER.

The continued strength in the sisal market has so affected the price of manilla that quotations on pure manilla rope, lath yarn and shingle yarn have been advanced ½c. per lb. The prices now ruling are, however, ½c. lower than the quotations prevailing a year ago. It is expected that the present prices will hold good till about the end of June.

AN ATTACK ON PIG IRON BOUNTIES.

AN attack was made in the Ontario Legislature on Wednesday by Mr. Hoyle, the member for North Ontario, on the pig iron bounty. His object was to urge that the bounty should be applied to the development of the peat industry instead of being devoted to the aid of the iron industry. Mr. Hoyle is a representative of a constituency in which there is a peat industry, but not any iron mines or blast furnaces. Possibly this may have influenced him in the position he took.

Mr. Hoyle is a successful business man as well as one of the most intelligent and able members of the Ontario Legislature, but he has made a bad bungle indeed of his attack upon the iron industry. The system of bonusing the iron industry may be wrong. There are a good many people who believe it is. There is this to be said about it, however: that since the Dominion and Ontario Governments gave a bonus to stimulate the industry, it has shown marked development.

When the Ontario Legislature passed an Act in 1894 appropriating $125,000 for the purpose of developing the iron industry, there was not a blast furnace in that province; now there are three, and others are in course of erection. In all Canada, in 1894, only 62,522 tons of pig iron were produced, while last year nearly 330,000 tons were made, of which three furnaces in Ontario supplied 109,000 tons.

There are in the whole of Canada at present fourteen furnaces, of which Ontario has three in actual operation, with a fourth practically completed at Sault Ste. Marie and a fifth in course of construction at Collingwood. Mr. Hoyle, in his speech on Wednesday, said there were seven in Ontario.

Whether the bonus is a good thing or not for the country, the industry has developed in a rapid manner during the last five or six years. The Dominion Government, it should be said, has given a bounty on pig iron, varying in amount, since 1884.

Mr. Hoyle was in error when he said that the Dominion and the Province during 1890 and 1891 had paid out in bonuses $248,158.60. As a matter of fact the bonuses received by the furnaces in Ontario last year, reckoning both the sums given by the Dominion and the Ontario Governments, was $286,842. The amount received by all the furnaces in the Dominion from the Federal Government was $703,119. This does not take into account the amount paid out in bonuses on steel, which was nearly $90,000 more.

In his speech Mr. Hoyle said that the wages paid for labor at the Canadian furnaces amounted to $10,000 more than the bounties. We do not know how he arrived at his figures, but, taking the report of the Ontario Bureau of Mines for 1901, which is the latest year for which we have statistics in this particular, we find that there was $500,000 paid out in that province alone for wages in the iron industry.

As far as the peat industry is concerned it is yet only in an experimental stage, and surely Mr. Hoyle, as a business man, would not take from the iron industry, which is developing so nicely, the money now spent in aiding the latter, in an effort to boom that which, even if ultimately made a success, would never be an industry of any great magnitude and certainly not approaching that relating to iron. We feel sure that if he looks more carefully into the case he will acknowledge that he was in error.

If the pig iron bounty is not economically sound, let Mr. Hoyle attack it on that ground, and not make a proposition which is economically unsound beyond all question.

Personality is the corner stone of the successful commercial enterprise.

A QUESTION OF SALARIES.

CANADIANS have an idea that the United States is the place to go to get large salaries; that more money is paid for work there than for the same work in Canada. We are only now awakening to the fact that this is a mistaken idea.

There are many positions in the United States in which large salaries are given; but so are there in Canada. The United States, having such a larger population than Canada, has more such positions than are to be found in Canada; but the salaries paid by Canadian employers are every whit as good as are paid by the Americans, and in some cases better. Besides, other things have to be taken into consideration. The cost of living is, as a rule, considerably more than in Canada. Therefore labor of all kinds should be worth more there than in Canada. Of course, very many Canadians have bettered their condition by crossing the border, but the vice versa of that is also true.

On the other hand, there are Canadians who have gone to the United States, thinking to obtain a larger salary, and found that they could not do so well as they had been doing in their own country.

Just such a case was heard of recently. A certain man, clever in his particular vocation, threw up a high salaried position he held with a prominent Canadian firm, and went to New York where, through the influence of friends there, he was enabled to obtain a position of equal responsibility as his Canadian one. But the salary paid was less than half the one he had been receiving. Certainly this one case does not prove the proposition; but there are other cases which might easily be cited. For instance, while the man referred to was in New York he learned incidentally of 32 Canadian families who were returning, having found that they could not do so well as they could in their own country.

If 32 cases came under one person's observation in the short time that he was in New York, is there any reason for not supposing that there are many more such?

The erratic man may cause more sparks to fly, but it is the systematic man who does the most work.

TRANS-CONTINENTAL RAILWAY QUESTION AND OCEAN TERMINALS

THE question of terminals for the proposed additional trans-continental railway lines seems to be attracting almost as much attention at Ottawa as the railway question itself. There is quite a pronounced sentiment in favor of the contention that the granting of even a charter, much more a bonus or subsidy, shall be contingent upon the railway terminal being in Canadian territory. The most pronounced advocates of this are naturally the representatives from the Maritime Provinces, but they are by no means alone in this respect. In nearly every part of Canada there are some champions of this policy.

The terminal question is certainly an important one. In fact, it can scarcely be divorced from the trans-continental railway question ; but important as it is, we must not forget that it is not the most important. It may be and probably is the most important to the ports on the Atlantic seaboard, but it is not the most important to the people of Canada as a whole.

The question that transcends all others is the ways and means of providing adequate transportation facilities for the Great West. To-day these are totally inadequate and have been for the last couple of years. Unless something is done, and that speedily, to remedy the present state of affairs great inconvenience and loss must be entailed upon the agricultural interests of the Great West and the commercial interests of the country as a whole, while the settlements of the farm lands of Manitoba and the Northwest will be greatly retarded. Large sums of money were lost by the farmers of the Northwest during the last year or two on account of being unable to get their grain to the seaboard. Every effort must be made to avoid a continuance of this.

But at the same time we must not overlook the terminal question, even if it is of secondary importance, or forget that what directly benefits and develops this and that seaport indirectly benefits the whole country. The trans-continental railway question, therefore, should not be approached in any narrow and provincial spirit. We should approach it as Canadians.

The Grand Trunk Pacific seems at present the one of the three companies desirous of building the additional line across the continent to find most favor, but although in theory the Grand Trunk Railway Company and the Grand Trunk Pacific Company are two separate and distinct companies, in reality they are one, and will work hand in hand.

As everyone knows, the terminal of the Grand Trunk is Portland, and there is where the rub comes in. Grand Trunk Railway officials have stated they are prepared, if necessary, to build a line through Canadian territory, in order that connection may be made with St. John and Halifax, whereby during the winter the grain and other produce of the West might be shipped by these ports. Knowing, however, how railroads evade agreements, there is doubt in the minds of many as to whether legislative arrangements would sufficiently safeguard the interests of Canadian ports and prevent whatever subsidies might be granted to the Grand Trunk Pacific Company for the construction of the line across the continent, from indirectly aiding in the development of Portland, a foreign port, and one that has already gained much at the expense of Halifax and St. John.

Fortunately there are three companies who are aspiring to construct a line through the Great West to the Pacific seaboard. And all are extremely anxious; and, in fact, so much so that one is almost inclined to ask them what they will give us to allow them to build a road rather than to bonus them to do so. Possibly in the future Canada will be able to secure from railroad companies a percentage of their earnings as a price for franchise privileges, just as many of the municipalities now are in regard to local electric franchises. In the meantime, however, it seems a foregone conclusion that if we are to get an additional road to the Pacific we shall be compelled to aid it in some way. The Government has declared emphatically that no land grants shall be made. This is a position which the country as a whole will no doubt endorse, particularly in view of our experience with the Canadian Pacific.

Urgent cases demand urgent remedies. The necessity of increased railway facilities in the Great West is of this character ; but we must be careful, nevertheless, not to pay too high for our remedy. With both the terminal and transportation questions before us, national sentiment has to be taken into account, as well as the purely business phase of the transportation problem.

From a purely business standpoint one would say, make whatever bargain you can that will facilitate the exportation of our surplus farm produce, irrespective of any local interests. But it would be sordid under the circumstances to eliminate the national phase of the question. Consequently it must be insisted that any aid given to the Grand Trunk Pacific, or any other company, must be contingent upon the terminals being in Canada.

Possibly we may have to pay a little more in the shape of subsidies on this account, but that should not deter us.

SMITH & WESSON FACTORY CLOSED.

A report from Springfield, Mass., states that the factory of Smith & Wesson, revolver manufacturers, has been closed down for an indefinite period, due to trouble with the employes. The latter were bent on joining a union in opposition to the wishes of the firm, and the lockout was the result.

GAS RANGE SALES.

The Gurney Foundry Co., Ltd., Toronto, state that the present season has brought them the largest and most satisfactory gas stove business they have ever had. Orders from the cities have been considerably in excess of previous years, while a good trade has opened up with several towns in which gas plants have been lately installed. The company have some interesting literature re gas ranges ready for distribution. All dealers should get a supply.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, May 29, 1903.

HARDWARE.

THERE has been a good movement of business in general hardware, the bulk of it centreing in barbed and galvanized wire, cut and wire nails, and similar lines. Barbed wire has been offered somewhat lower f.o.b. Cleveland, but the spot price here has not been affected at all. Cut nails are offering also at somewhat lower figures here. There have been some changes in bolts and nuts, and cordage is not only higher all round in price but firm at the rise. An active movement is noted in building paper, and with the exception of a decline in dry fibre of 5c. prices are unchanged. Cement is steady and a leading feature in it is the placing of very heavy import orders for prompt shipment. Monarch horse nails have been reduced.

LAWN MOWERS.—There is a fair movement. We quote: 10-in. wheel x 12-in. cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—There has been no change in the spot price, but the material is a good movement in this line. We quote: as follows: $2.80 per 100 lb. f.o.b. Montreal, and $2.55 f.o.b. Cleveland. Carlots of 15 tons are quoted f.o.b. Cleveland at $2.45.

GALVANIZED WIRE.—There has been a good movement in this line. We quote: No. 5, $3.70; No. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—Continues steady with a fair demand. We quote: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE STEEL WIRE.—In fair request at 25 per cent., with extras 1 and 2 lb. hanks, 25c. per 100 lb.; ½ lb. hank 37½c. and ¼ lb. hanks, 50c.

BRASS AND COPPER WIRE.—Discounts are unchanged at 60 per cent.

PRESSED SPIKES.—There is a fair inquiry. The discount remains 20 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

FENCE STAPLES.—There is a quiet movement in these. We quote: $3 per 100 lb. keg for galvanized and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

CUT NAILS.—There is a good demand for these, and jobbers are now accepting orders for them at $2.45 per keg.

WIRE NAILS.—The movement in these continues of good volume also. We quote carlots at $2.40 and small lots at $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

HORSE NAILS.—There is only a very quiet trade in these. "Monarch" have been reduced. We quote: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, prices quoted on application. "C" brand, 40, 10 and 7½ per cent. off; "Monarch," 65 and 10 per cent. and "Peerless," 50 per cent.

HORSESHOES.—Trade in these has continued fair at the rise. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No 1 and smaller, $4.15; X L steel shoes, new, light pattern, sizes 1 to 5, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—Inquiry for certain sizes is well maintained. We quote as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off, and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—There have been some changes in these and trade is fair. We quote: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent.; machine bolts, 50, and 5 and 10 per cent.; coach screws, 66 2-3 and 10 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 and 10 per cent.; bolt ends, 50 and 5 and 10 per cent.; plough bolts, 50 and 5 and 10 per cent.; tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3¾c. per lb. off list; hexagon nuts, 4c. per lb. off list.

SCREWS.—In good request. We quote as follows: Round head bright, 82½ per cent.; flat head bright, 87½ per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

CORDAGE.—There has been an advance all round in this line and the market is firm at the rise. We quote: Pure manila, 14½c.; British pure manila, 12c.; sisal, 11½c.; double lathyarn, 11½c.

BUILDING PAPER.—There is a good demand for building paper and prices are steady with the exception of dry fibre, which is rather lower. We quote as follows: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 50c. per roll; tarred fibre, 60c. per roll, O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

FIREBRICKS.—There is a good movement in these. We quote: $16 to $22 per 1,000, as to brand, for English, and $17 to $22 for Scotch.

CEMENT.—There has been a lot of this moved forward during the week, and heavy import orders are also being placed for prompt shipment. We quote as follows: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl. ex-store, and American, $2.20 to $2.40 ex-cars.

SHOT.—Still moving well. We quote as follows: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7.00 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount, 15 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

METALS

The heavy iron and metal market has presented a fair degree of activity during the week, and the easier feeling noted in several staple lines has not as yet interfered with the movement of business to any appreciable extent. In bar iron easiness is reported both in England and the States, but local prices have not been affected yet. Black sheets, however, have been shaded in price, and so has tinplate and terne plate, both of which are lower than they were. Canada plate is unchanged. In copper, offers for forward shipment have been made for less money. Ingot tin also shows an easy tendency, though not quotably changed, and the same can be said of zinc spelter.

BAR IRON.—While easiness is noted both in Great Britain and the States the fact has not affected prices here. Canadian mills still have large orders in hand. We quote: Merchants' bar, $2; horseshoe iron, $2.25, and forged iron, $2.30.

BLACK SHEETS.—Prices are lower on these and stocks are now well assorted. We quote: 28 gauge, $2.45; 26 gauge, $2.40; 22 to 24 gauge, $2.35; 18 to 20 gauge, $2.30 and 8 to 10 gauge, $2.40.

GALVANIZED IRON.—There has been an active movement in these and prices have been shaded 10c. this week. We quote: 28, Queen's Head, $4.40; Apollo, 10¾ oz., $4.30; Fleur-de-Lis, $4.15; Comet, $4; Bell brand, $4.05; in less than case lots, 25c. extra.

LEAD PIPE.—There has been a good inquiry and we quote: 8c. for composition waste and 7c. for ordinary, with 30 per cent. discount.

IRON PIPE.—There is a fair business in this line. We quote: Standard pipe per 100 ft., in lengths under 19 ft.: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85, ¾, $3.65; 1-in.,

$5.20 ; 1¼, $7.35; 1½, $8.95; 2-in., $12.55. Galvanized, ¼, $3.20 ; ⅜, $3.45 ; ½, $3.85; ¾, $5 ; 1-in., $7.20 ; 1¼, $10.05 ; 1½, $12.20 ; 2-in., 416.85. **Extra heavy pipe, plain ends, are quoted per 100 ft. as follows : Black, ½, $4.20 ; ¾, $5.25 ; 1-in., $7.55 ; 1¼, 410.55 ; 1½, $12.75 ; 2-in., $17.60 Galvanized, ½, $5.20 ; ¾, $6.65 ; 1-in., $9.55 ; 1¼, $13.25 ; 1½, $16; 2-in., $21.90. For threads and couplings on extra heavy 5 per cent. net is added. Trade discount, 5 to 7½ per cent.**

TINPLATE.—There has been shading in prices of these also, while business has been quite active. We quote : Charcoal, $4.25 and cokes, $3.85 to $4, as to quantity.

SOIL PIPE.—Continues the same. The discounts are quoted as follows : Light soil pipe, 3 to 6 in., 50 per cent.; medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8-inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.: extra heavy fittings, 8-inch, 45 per cent.

PIG IRON.—The decline in the outside markets has not yet affected spot prices. We quote $21 to $21.75 for Summerlee and $19 for Middlesboro'.

INGOT COPPER.—Steady but quiet at $15.50 to $15.75 per 100 lb. Advices note easiness in London but firmness in New York, where there is a scarcity of stock for prompt delivery.

INGOT TIN.—Rules quiet but steady here at $33 to $33.25 per 100 lb. The tendency of the outside markets is towards easiness, as the action of the tin plate manufacturers in the States indicates, for they are so sure of the future that they have announced prices up to October 1.

PIG LEAD.—Continues unchanged at $3.50 to $3.75.

STEEL.—Business continues fair, the only change being a rise in square harrow. Prices are as follows : Mild, $2.05 ; sleighshoe, $2.10 to $2.20 ; tire, $2.15 to $2.25 ; spring, $2.85 to $3 ; reeled machinery, $2.75 to $3 ; toecalk, $2.60 to $2.75 ; machinery (iron finish), $2.10 ; mild steel, $2.05 ; square harrow, $2.50.

TOOL STEEL.—Unchanged as last quoted : Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade ; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATE.—There has been a good movement in this line. We now quote : 52s, $2.60 to $2.70 ; 60s, $2.70 to $2.80 ; 75s, $2.80 to $2.85 ; full polished, $3.75 and galvanized, $4.25 to $4.35 ; galvanized, 60s, $4.45 to $4.55.

TERNE PLATE.—While inquiry is fair prices are lower, the base having been reduced to $7.25 this week.

COIL CHAIN. There has been a readjustment of prices on this line as follows : No. 6, 10c.; No. 5, 9c.; No. 4, 8½c.; No. 3, 7c.; ¼-in., 6½c.; 5-16 in., $4.90; ⅜-in., $4.20; 7-16-in., $4; ½ in., $3.90; 9-16 in., $3.75; ⅝-in., $3.60; ¾-in., $3.50; ⅞ in., $3.45, and 1-in., $3.40, with 10c. allowance on carlots.

SOLDER.—Quiet and steady at 20c. for bar and 19c. for wire.

ZINC SPELTER.—Unchanged at $6.25 to $6.50. In New York forward delivery offers are being made for 10 to 15c. less money than for prompt shipment.

SHEET ZINC.—There has been no change, the range being $6.75 to $7, as to gauge.

Our quotations are as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $17 to $17.50; No. 2, $7.50 per ton; machinery scrap, $17.50 to $18; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6¼ to 6¾c. per lb.

HIDES.

Unchanged as last quoted. No. 1 hides, 8c.; No. 2, 7c.; No. 3, 6c. Calfskins, 9 to 11c.; sheepskins, 75c.; lambskins, 15c.

ONTARIO MARKETS.

Toronto, May 29, 1903.

HARDWARE.

THE holiday, instead of causing a subsequent quietness, seems to have made the rest of the week all the busier for the jobbers, in fact, orders are larger than last week, and as there is a day less to get them out in, they seem more numerous. Screen doors are being delivered somewhat more freely. Cordage is ½c. higher. Otherwise conditions are practically unchanged. The lines which have been difficult to obtain are as scarce as ever and prices on these, as on practically all lines, continue firm.

BARB WIRE.—Business is lessening somewhat, orders now being for small lots. The base price is as follows: $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

GALVANIZED WIRE. A fair business is still doing. Our quotations are as follows: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots and at $2.15 in carlots.

SMOOTH STEEL WIRE.—The demand is reduced. The base price is $2.50 per 100 lb. Oiling 10c.; coppering 60c.; and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

COIL SPRING WIRE.—Trade is keeping up well. We quote: No. 9, $2.75; No. 11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlot of 15 tons, 5c. less, with freight up to 20c. allowed.

WIRE NAILS.—Stocks are light; the demand active. We quote as follows: Carlots, $2.40 and small lots, $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—An excellent demand keeps up at $2.50 per keg f.o.b. Toronto.

HORSE NAILS.—A fair trade is doing. Our quotations are: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 60 and 10 per cent. and "Countersunk" head," 60 per cent.; on "Peerless," 45 and 7½ per cent.

HORSESHOES.—The advance is well maintained. A fair trade is doing. We quote, f.o.b. Toronto: Iron shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05. Steel, new light shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20. Snow shoes, No. 2 and larger, $4.05; No. 1 and lighter, $4.30. If shipped from factory, 15c. less.

SCREWS.—Business is active, with a scarcity of coach screws. Quotations are: Flat head bright, 87½ per cent. discount; round head bright, 82½ per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

RIVETS AND BURRS.—In fair demand. We quote: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

BOLTS AND NUTS.—Manufacturers' agents are having great difficulty in getting the goods to fill orders from large factories, foundries, etc. The jobbers, however, are able to fill from stock ordinary orders for usual sizes. We quote: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron, ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

BINDER TWINE.—The market continues strong, but a change is not looked for during the next few weeks. A good trade is doing. We quote: 650 ft., 13c.; 600 ft., 12c.; 550 ft., 11¼c.; 500 ft., 10½c.

CORDAGE.—An advance of ½c. is noted in pure manila, lathyarn and shingleyarn. We quote: Pure manila, 11½c.; British pure manila, 12c.; sisal, 11½c.; double lathyarn, 11½c.; single lathyarn, 11c.; double shingleyarn, 11½c.; single shingleyarn, 11c.

LAWN MOWERS.—There is still a shortage. The prices are steady. We quote: Woodyatt, 12-in., $7.50; 14-in., $8; 16-in., $8.50; 18-in., $9; 20-in., $10; Star, 12-in., $5.50; 14-in., $5.75; 16-in., $6; Daisy, 12-in., $4.90; 14-in., $5.10; 16-in., $5.30; Ontario, 12-in., $14.25; 14-in., $15.80; 16-in., $16.80; 18-in., $18.90; 20-in., $20.50; Philadelphia, 12-in., $6.50; 14-in., $7; 16-in., $7.50. Discount, 40 and 10 to 50 per cent.

SOIL PIPE AND FITTINGS.—An excellent trade is doing. Prices are steady, with the discounts quoted as follows: Light soil pipe, 45 and 5 per cent.; light soil pipe fittings, 50 and 5 per cent.; medium and extra heavy pipe and fittings, 55 and 5 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

BRASS GOODS.—The demand for both plumbing and steam specialties continues brisk. Discounts are unchanged.

BUILDING PAPER.—The market is decidedly firm, with a good trade doing. Quotations are: Tarred felt, $1.75 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100-lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre 50c. per roll; tarred fibre, 60c. per roll, O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN DOORS.—Stocks are somewhat larger. The demand has been greater than anticipated. We quote: Screen doors, common, 2 or 3 panel, walnut stained, 4 in. style, $6.80; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

PLUMBING FIXTURES.—The demand keeps active, and earthenware stocks, particularly of closets, are comparatively light. Prices are steady.

FORK HANDLES.—The new discount of 50 per cent. has been put into effect. A good demand is noted at the new figure, though much of the business had been booked at the old.

CEMENT.—The market is firm. A big demand is noted. We quote in car lots, Toronto, as follows: Canadian Portland, $2.50; German, $2.40 to $2.50; English, $2.30 to $2.50; hydraulic, $1.50. Small quantities are 15 to 25c. higher.

METALS.

The holidays had a quieting influence, though business keeps satisfactory in volume. The only depressing feature of a remarkably active year is the unsettling effect of labor troubles. But for such difficulties it is abundantly clear that the present season would have been a record one. The feature of the situation as regards prices is the reduction in prices of pig iron in consequence of the lower prices in other markets. Pig tin has declined over £1 per ton in the week in England, but there is no change here. Copper has fluctuated during the week, a reduction of ¼ to ½c. being the result in the primary market. Other lines are steady.

PIG IRON.—Prices at Pittsburg have slowly settled, until the announcement was made this week that the U.S. Steel Corporation had placed large orders for Bessemer pig iron at $18.50 per ton, a reduction of over $1 from recent quotations. Other markets have declined in about the same proportion, but so far the reduction here is not more than 50c. We quote f.o.b. Toronto: Hamilton and Midland No. 1, $22.50; Sydney No. 1, $20.50; No. 1 Jarrow, $21.50; No. 2 Summerlee, $25.

BAR IRON.—There is still considerable English bar iron coming in, as stocks of Canadian are light. A big demand is reported. We quote: Base price is $2.05. For extras, cut to length while rolling: 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

STEEL BOILER PLATES.—A steady trade is doing with the base price still $1.96 f.o.b. Toronto.

TOOL STEEL.—A big business is doing with prices firm: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8 to 9c.; Park's "Silver," 12 to 14c.; Park's "Special," 15 to 20c.

MACHINERY STEEL.—The activity continues, with prices firm at $2 to $2.05 f.o.b. Toronto.

COKE.—There is a good business doing, but it is largely of a hand-to-mouth nature, as buyers here complain of difficulty in securing good qualities. Quotations range from $6.75 to $7.15 for 72-hr., and $5.50 for 48-hr. furnace coke, f.o.b. Toronto.

BLACK SHEETS.—There is a good demand. We quote: Common, $3.15 for 28 gauge and dead flat, $3.50 for 26 gauge.

CANADA PLATES.—Import orders, which should have come forward in April, are just coming in now, having been delayed in transit. Prices are steady. A good business is doing from stock. We quote: All dull, $2.90 to $3; half-polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—A good trade is doing. Prices are unchanged.

throughout. We quote: Queen's Head, $4.50 for 28 gauge; American, $4.10 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—During the week prices fell £6 in the English market, but a recovery of £1 10s. took place on Wednesday. In New York the market is 1c. per lb. lower than last week. Local quotations are not influenced yet. We quote $33 to $33.25.

TINPLATES.—Prices are firm. A good demand is reported. We quote as follows: Charcoals, $4.75 to $5 and cokes, $4.25 to $4.50 per box.

COPPER.—The demand for both ingot and sheet continues good. Prices are unchanged locally, but somewhat lower in primary markets. We quote: Ingot copper, $15, and sheet copper, $21 to $22 per 100 lb.

BRASS.—Unchanged in price and in good demand. Discount, 10 per cent.

LEAD.—The market is firm with a good business doing. We quote: $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE.—An excellent business continues. We quote as follows: Per 100 ft.: Black pipe, ⅛-in., $3.25; ¼-in., $2.40; ⅜-in., $2.65; ½-in., $2.85; ¾-in., $3.65; 1-in., $5.25; 1¼-in., $7.35; 1½-in., $8.95; 2-in., $12.55; 2½-in., $21; 3 in., $25; 3½-in., $32; 4-in., $38.

ZINC SPELTER.—An active demand is reported with stocks still light. Prices are firm at 6¼ to 6½c. per lb.

ZINC SHEETS.—Considerable business is doing in small lots. We quote base price as follows: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

SOLDER.—In good demand. Prices are unchanged. Guaranteed half-and-half is quoted at 18 to 19c., and wiping 17 to 18c.

OLD MATERIAL.

The demand in this line is better than it was last week, but the prices remain firm. We quote: Heavy copper and wire, 11½c. per lb.; light copper, 10c. per lb., heavy red brass, 10½c. per lb.; heavy yellow brass, 8½c. per lb.; light brass, 6c.; lead, 2½c.; scrap zinc, 3¼c.; iron, No. 1 wrought, $14 per net ton; No. 2 wrought, $5; machinery cast scrap, $16; stove plate, $11; malleable and steel, $7; old rubbers, 6¼c. per lb. and country mixed rags, 50c. per 100 lb.

HIDES, SKINS AND WOOL.

There has been an advance of ½c. per lb. on all green hides, and ¼c. on cured. Fleece wool is still weakening, it being now quoted ½c. lower. The calfskin market remains firm. We quote:

HIDES.—No. 1 green, 8c.; No. 2 green, 7c. per lb.; No. 1 green, steers, 8½c.; No. 2 green, steers, 7½c. per lb.; cured, per lb., 8 to 8½c.

CALF SKINS.—Veal skins, No. 1, 6 to 14 lb. inclusive, 10c.; No. 2, 8c.; No. 1, 15 to 20 lb. inclusive, 9c.; No. 2, 7c. Deacons (dairies), each, 60 to 70c.; sheepskins, 40c. to $1.10.

WOOL.—Unwashed wool, per lb., 8 to 9c.; fleece wool, 14½ to 15½c.; pulled wools, super., per lb., 15c.; extra, 18c.

TALLOW.—We quote 5½ to 5¾c. per lb.

PETROLEUM.

The market is quiet. There is some cutting in Canadian grades but the best American oil is reported steady. We quote: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less.

SEEDS.

The seed season is over for all practical purposes, although there are a few small scattered orders still coming in. Prices remain firm at last week's quotations. We quote ex warehouse here: Red clover, per bushel, $6 to $7.80; alsike, per bushel, $4.80 to $8; timothy, per bushel, $2 to $2.75.

MANITOBA MARKETS.

WINNIPEG, May 26, 1903.

THE hardware trade is without news this week. No changes of price are recorded up to Saturday night. Business is good and steady. Supplies of building hardware are increasingly in demand, and in fact it would be hard to name any line in which a good business is not being done. A reduction of 25c. is noted in galvanized iron. Horsenails are 25c. higher. Manilla rope and lathyarn is 50c. higher. A new list on plain galvanized wire is issued, the seeming irregularity of prices being occasioned by the fact that sizes nine, twelve and thirteen are admitted duty free. We quote:

Barbed wire, 100 lb.		$3 25
Plain galvanized	6 to 8	3 25

WILL IT PAY?

Every business transaction is weighed by one standard.

Will it Pay?

If you handle *oil of any kind* and are considering the purchase of a

BOWSER
Self-Measuring
OIL TANK

Let us ask you a few questions:

Is it worth 10 cents a Day to handle your oil without waste?

Is it worth 10 cents a Day to sell your oil without loss of time and labor?

Is it worth 10 cents a Day to have no leaky, dirty measures and funnels to handle?

Is it worth 10 cents a Day to keep your oil room neat and clean?

We might propound a hundred questions equally as pertinent. If any one of these is worth 10 cents a day, is not the combination of the many worth more than the cost of a **Bowser Self-Measuring Oil Tank**, which will give you all these advantages?

Let us give you full particulars. Ask for Catalogue "A."

BRITISH COLUMBIA MARKETS.

Vancouver, B.C., May 25, 1903.

HARDWAREMEN say they are at present most interested in the slowness of receipt of goods, which they blame partially on the manufacturers in delaying shipment and partially on the railways in not providing speedy transportation. Trade in nearly all hardware lines is good, especially so in the building hardware in Vancouver. The strike of carpenters in Victoria has had a tendency to make builders' hardware quiet in that city, and it is possible that building may be virtually stopped there this season. The carpenters of Victoria are out, demanding $3.50 and an eight hour day before they return to work. This season had promised to be one of the best in building in Victoria for some years, but it is not an absolute necessity to build, the supply of houses and business premises is sufficient and it is not at all unlikely that many plans will be called off rather than that the builders will give in to the demands of the men. In Vancouver, the recent carpenters' strike, which only lasted a few days, resulted in a decision by arbitration to pay the men 40c. per hour for an eight hour day.

* * *

It is rather early yet for northern trade to open up, though there are some good orders already in sight. Supplies for mining and mining machinery are the principal. Building hardware is fairly in demand in the north for the coming season, but not to the extent experienced in some past seasons. Hardware dealers in the north are reported to feel that they are not likely to have as good a trade in building hardware as in mining supplies. There have been some large shipments of heavy boilers, pumps, and other mining machinery already sent north, and some hydraulic machinery is also to be shipped ere long.

* * *

The greatest change in conditions here in the past year or so is in the amount of metal goods, especially bar iron and steel, rails, plate, etc., received direct from the manufacturers in the Old Country. There was a time, not so long ago, when the tinplate supplies for the canneries on the Fraser and up the coast were the largest hardware items received. Now there are many sailing vessels bringing in large cargoes of metals, and the China Mutual and Blue Funnel Lines of steamers are making the ports of Vancouver and Victoria regular calls monthly, and discharging large quantities of goods.

At one time sailing ships were glad to bring fire brick, fire clay, cement, salt, and similar supplies, almost on ballast cargo basis, to this port. Now, there are immense quantities of steel rails being brought, the cement which is brought from England is all required, and very big shipments of all metals and machinery are received. The fact that the British market is more favorable for buying in than the United States market for the past year or so, is, of course, responsible for a good deal of the difference.

NOVA SCOTIA MARKETS.

Halifax, May 26, 1903.

FOR the last two weeks there has not been the same amount of activity in the hardware trade as prevailed during the previous two months, but still there was enough doing to prevent the state of trade being called dull. The travellers on the road are finding it profitable to go over their territory, even though the orders obtained are not of heavy volume, and are of the sorting-up variety. Their reports from the various sections are encouraging, though there is still a feeling of uncertainty in monetary matters that inclines the trade to do a rather conservative business.

* * *

The retail trade is fairly active as this is the season for working off a lot of seasonable stuff for house repairing, house cleaning, gardening, and other lines. Many of the hardware advertisements are now pushing paris green, fertilizers, etc., as the season is on when these are in demand. Wire screen, for windows, doors, etc., and poultry net-

Hayes' Patent Steel Lathing

Has Points in its favor that you can't afford to overlook.

In the first place it requires less mortar, and can be more quickly applied than others—most valuable advantages that have been proved by conclusive tests.

Then the sheets are not weakened by stretching in manufacture—they clinch and hold the mortar firmly, making the most rigid lathing you can find.

This gives a fire, water and vermin proof protection, that is really more economical in cost than other styles.

For covering pipe chases, hot-air flues, etc., it is extensively used and proves invaluable.

Read it up in our catalogue and you'll fully understand its superiority.

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

lines are also in good demand, although the weather has been such that windows and doors remain largely closed for comfort. Sporting goods have also been meeting with much demand both for the athlete and the sportsman, who just now goes a-fishing.

A very heavy business has been done this season in builders' materials of all kinds, and the wholesale houses are not averse to a slack spell just now, when lighter lines are handled. The orders for haying tools and farm implements have been heavy, and the time is now due for their shipment, which will keep the various dealers busy for the next week or two.

* * *

The markets show no indication of relaxing in the general firmness in all lines, some of which it is especially hard to engage for prompt delivery. The easier feeling in pig iron generally, which is now noted, both in England and in the United States, may soon place the manufacturers in a position to remedy this drawback to trade. The wholesalers here, as elsewhere, will welcome the return to normal conditions.

* * *

Paints and oils have been in heavy demand, notwithstanding the firmness of prices. Linseed oil is steady at prices formerly quoted—65c. for raw and 68c. for boiled. Turpentine is somewhat easier than a month ago, and is now quoted at 85c. in barrel lots. The price is still much higher than in former years, and this has also largely affected other articles in the manufacture of which turpentine is used.

* * *

There has been a good demand this season for wire fencing, and the quotation is $2.90 base, and 3½ to 4½c. for staples. Nails have also sold largely, the quotation being $2.45 base for both cut and wire. Lead, both sheet and pig, and all lead products, are firm, and there is an advancing tendency. Sheet lead is now quoted at $4.75 for 3 lb. or heavier, there having been a material advance during the last month. Pig lead is quoted at $4 to $4.25. There has also been an advance in zinc, which is now quoted at 6¾c.

* * *

Notwithstanding present firmness in prices, some lines of Canadian manufacture may still advance. This may be judged from the following: An Ontario manufacturing firm, writing to a wholesale house here, says that, "While, fortunately, there has been no open conflict between the firm and their workmen, they have been compelled twice to advance wages since many of their orders were booked. They did this to keep the workmen from going on strike, and he considered it severe on them to fill contracts now which were based on former wage scale. Future business, he said, would have to be done on a changed basis, and the difference in wages be considered in making contracts."

R.C.H.

CHAT

McCURDY BROS., Stratford, have purchased the hardware business of G. W. Karsteadt, Georgetown; and they will carry it on as a branch of their Stratford business.

A. P. Laurent intends to carry on a business as importer and dealer in constructing material in Quebec, under the name of The Portland Cement Co. of Canada, of which he is sole partner.

J. P. Newman's saw mill at Wiarton, Ont., has been completely destroyed by fire.

The mining town of Little Bay, Nfld., where a large copper mine was being worked, has been devastated by fire. The total loss is estimated at $50,000.

The Dominion Wire Company's factory at Lachine, Que., was slightly damaged by fire recently.

Prof. Miller, of the Bureau of Mines, who has been visiting the mining districts of Eastern Ontario, reports that the Belmont gold mine in Hastings, the largest mine in Ontario, proposes extensive increases to its capacity this summer.

E. Alexander, Campbellton, has sold his sawmill and timber limits to the William Richards Company for $115,000.

Geo. Murray, formerly of Seaforth, is about to engage in the manufacture of cement brick.

The sawmill at Brigden, Ont., has been completely destroyed by fire. The fire is supposed to have started from the furnace. The loss is estimated at $1,000, and there is no insurance.

On account of the by-law which has been passed by the Ottawa Council prohibiting the piling of lumber within the city limits, J. R. Booth fears that he will have to close down his mill, not having any place to put the lumber made.

Lamps in the Hardware Store

IT is a generally-recognized axiom in business circles that the merchant who wins the largest measure of success, whose business continues to develop year after year, is the merchant who has paid much attention to the finer points of his business, who has not been content to sell what is easiest to sell, but has striven to win trade in the more difficult channels, by selling goods not offered by his rivals.

To the hardware merchant are offered many opportunities for expansion, for building up new trade. Take lamps as an instance. Hardwaremen, as a rule, handle lamps, but generally their stock consists of the ordinary cheap glass lamp in everyday use. Few make a thorough study of this line, but it seems that those who do so find it one of the most satisfactory lines in their store. One Ontario retailer has sold over $200 worth of lamps in a year, and as the ratio of profit is large he has added to his net income a good sum from this small line. Moreover, he has found lamps an exceedingly attractive line, either for window or interior display.

"There is no reason why hardwaremen in every town should fail to make a good profit on lamps," said John Kent, of Gowans, Kent & Co., to HARDWARE AND METAL the other day. "The trouble is, with those who do not get the desired results, that they do not carry a well-selected line. Too many confine themselves to the common glass lamps, together with a supply of chimneys, burners, wicks, etc., which goods are carried in every store and are sold at comparatively close prices."

"What would you consider a full assortment of table lamps for a hardware store?"

Vase Lamp.

"They might well be roughly divided into three classes; (a) glass lamps, in all their varied sizes and kinds, ranging from the cheap hand lamps, sold without burner or chimney, at 10c., to the more elaborate lines completed with shade and ring or fancy chimney, and retailed at $1 each; (b) decorated opal vase lamps, including all lines without removable oil pot, ranging in retail price from the lines without brass base at 75c., to handsome lamps completed with 10 in. globes at $3 each; (c) decorated opal reception lamps, with lift out or removable brass oil pots, retailing from $2 to $10 each and higher."

"What other kinds might be added?"

"Various styles of library, hall and store lamps, in hanging fixtures, all-metal banquet, reception and piano lamps, and sundry lines, such as night lamps. At first glance this may seem a heavy range for a hardware retailer, but experience has shown that where a good stock is carried the results have been eminently satisfactory. It is not necessary to stock every style of lamp at first, but care should be exercised to have a well-assorted, if not large, stock."

Decorated Opal Reception Lamp

"How should selections be made?"

"The glass lamp first referred to may be procured in dozens of different designs of crystal glass and in various different colors, including decorated styles. Most of the wholesale houses assort the different sizes of one design into a small package, and as the quantities are small this makes a splendid way of handling these lines for beginners."

"Then, how about opal decorated lamps?"

"The buyer should make sure that all such lamps should have 'fired decorations,' i.e., before any of the metal fixings are attached, the opal blank, as the plain milk white glass body is termed, is decorated with mineral colors and subjected to an intense heat, which fuses the outer surface of the glass and the painting thereon into one body, making it impossible to remove the decoration except by filing off or destroying the actual surface of the glass, a test to which, of course, no lamp is subjected in actual use. This, you can see, adds to the expense of the manufacture, and to meet the demand for the cheapest kind of a vase lamp various lines of cold decorated lamps have been placed on the market. In these the decoration is simply painted on the glass with ordinary oil colors; and while at first the tints and colors may be even brighter than some fired lines, it is only a matter of time before the whole decoration is washed or worn off, resulting in dissatisfaction to the customer. The buyer will not have difficulty in ensuring 'fired decorations' if he is careful regarding the matter."

"Do the better lines yield larger profits than the cheaper ones?"

"Certainly; on the better lines the margin of profit should run from 40 to 60 per cent., so, as the danger from breakage is to-day exceedingly small, there is every reason why the retailer who handles the cheaper lines should carry in stock the more attractive styles."

"Is there any reason why the trade should not handle the better qualities of lamps?"

Banquet Lamp.

"No valid reason. The line takes up considerable room, and in some seasons of the year the sale is not large. But against such objections may be put the fact that the line adds so much to the attractiveness of the store. It is true that the sale of lamps is greater from August till Christmas than in the early months of the year, yet the trade is always worth having, especially as the total volume in a year may be of such large proportions.

PAINT, OIL AND BRUSH TRADES

ANOTHER ADVANCE FOR W. S. FALLIS.

W. S. FALLIS, formerly travelling representative for The Sherwin Williams Co. in the Maritime Provinces and in Newfoundland, has been appointed manager of the European department of the company, with headquarters in London, England.

Mr. Fallis is one of the many Canadians who is making headway in the world's commercial fields. He is a young man of more than ordinary ability who has pushed himself to the front through the force of hard, persistent work, and who through the marked ability he has displayed as a business getter for The Sherwin-Williams Co. advanced himself in little more than two years from the position of traveller to the managership of their most important foreign branch.

Before connecting himself with The Sherwin-Williams Co. Mr. Fallis travelled for probably the largest bicycle company in Canada in the days of the old high wheel: in fact, he is said to have been the pioneer bicycle salesman in Canada.

Mr. W. S. Fallis.

On November 1, 1900, he was engaged by The Sherwin Williams Co to represent them in Western Ontario, which territory he covered for one year. In 1901 he was assigned to the Maritime Provinces and Newfoundland. He was very successful in this field. Later he opened up the paint trade of the West Indies for his company. His selection of the important post to which he has been appointed is a tribute, not only to his sterling business qualities, but also to the Canadian spirit of perseverance and progressiveness.

The establishment of a European department by The Sherwin-Williams Co. marks another step in their plans for the greater extension of their business. Their trade in the foreign field, particularly in the British Isles and Continental Europe, has been growing in a most encouraging way, and in opening the London house they are simply keeping step with the wonderful organization they have perfected to make true the statement that "The Sherwin - Williams Paints Cover the Earth."

CAUSES OF DISSATISFACUION.

AN interesting series of articles has appeared from time to time in Good Paint, issued by John Lucas & Co., on cases of complaints which have been investigated. The May issue deals with a case in New Jersey of a house built of white pine clapboards, well seasoned, first painted 12 years ago, with three coats of good-quality pure linseed oil ready-mixed paint, properly thinned and applied by a capable painter. This paint wore exceedingly well. Six years ago the building was again painted, this time by an inexperienced day laborer.

The result was that the paint last applied in some places has shrunk into small balls or nodules, bone hard, wrinkled and quite rough. The top and bottom edges of the clapboard are worse than the centre; the house has the appearance of having been sanded.

Investigation made it clear that these results were due to the manner the second painter did his work. In the first place the paint had been applied too thick by a greenhorn laborer who did not know how to use paint. Then, he did not follow the directions requiring an extra amount of linseed oil for priming or first coat on all old as well as new work. The result of such negligence would be that the old and dry work would absorb a considerable percentage of the oil in the first coat, impairing the elasticity of the first coat and causing it to crack, etc. Another possible cause of such action would be due to the painter having used hydrocarbon or coal oil in thinning his paint. This would extend the linseed oil in the paint and naturally impair its elasticity, causing the cracking and crawling in the under coat as well as the finishing coat.

Good Paint points out that such troubles would be obviated by the employment of practical painters, or by careful attention to the rules of proper work, that for new work and for old work, for priming or first coat one or two pints of pure raw linseed oil should be added to every gallon of ready mixed paint. The paint should be laid on thick, but brushed out thin. It should, too, never be forgotten that three thin coats of paint are much better than two thick.

Hardware dealers will find it advisable to help users of paint to understand the proper methods of application, for this is almost as important as the use of a high quality of paint.

CULTIVATION OF THE CASTOR BEAN

A Hawaiian company has been planting the castor plant for a number of years, and great success has been met with. The plant does very well in that climate and develops in about seven months. The full crop is then on and an acre of land should bring in about a ton and a half a year. The prevailing price is $60 per ton and all that can be supplied will be used right in the territory. The Wahiawa colony people have seen that there is something in the raising of the castor bean and will put in about 100 acres at once. If the plants do well and the venture is a success the farmers will put in some 500 acres more. The company has its factory on the other side of the island, and will, in about three months' time, put on the market the first of the product of that place. One hundred gross of bottles have already been sent for, and The Honolulu Bulletin is authority for the statement that a sale of every bit of the Hawaiian article that can be produced is already arranged for.

PAINT AND OIL MARKETS.

MONTREAL.

WITH the exception of turpentine the market occupies precicely the same position as that reported a week ago. The line specified however has had a sharp recovery from the decline of the past fortnight, and this week single barrels are quoted at 78c., and larger lots, 77c. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $5 to $5.25; No. 1, $4.27½ to $4.87½; No. 2, $4.40 to $4.50; No. 3, $4.02½ to $4.12½; No. 4, $3.65 to $3.75, all f.o.b. Montreal. Terms, four months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$4.75 in casks and in kegs, $5.

"Ark Brand" Paints

ARE PERFECTLY MIXED AND CAN BE INSTANTLY USED BY ANYONE.

Dealers handling "Ark Brand" Paints will find that they meet the requirements of every class of trade, because it is a paint that is made of the finest materials, and is compounded ready for use, so that anyone may apply it and secure a rich, glossy, lasting finish.

Every can of "Ark Brand" Paint is guaranteed to give satisfaction, or we will refund the purchase price. "Ark Brand" Paints mean continually increasing trade. Here's proof:

"Sault Ste. Marie, May 9, 1903

"The Francis-Frost Co., Limited, Toronto, Ont.

"Gentlemen,—We have handled your 'Ark Brand' Ready Mixed Paints for several years, and, as you know, our sales have increased yearly.

"We find your paints very satisfactory, and can report also that they give uniform satisfaction among customers.

"Yours truly,

LINSEED OIL

N.B.—We are always in the market to buy good, sound, oak Linseed Oil, Turpentine, Varnish and Machine Oil Barrels.

WHAT'S NEW?

PHENOM

Varnish and Paint Remover.

And we believe Phenom is one of the best articles on the market for its purposes, too.

Why?

Because it will not injure hair or bristles of brushes; nor will it raise the grain of the wood.

Because it is harmless to hands, is not irritating to eyes and has no unpleasant odor.

Because it instantly removes old varnish, shellac, enamel and paint, leaving the surface ready for use.

Sold in convenient packages. Postal us for trial order. A chance to prove our claims is all we ask.

TORONTO.

The feature of the market is the stiff advance in turpentine during the past week, both locally and at Savannah. The rise at Savannah amounts to about 7c. per imperial gallon, but as the local market did not follow the primary market quotations to their lowest level, the advance here is but 3c. The market is stiff at present figures, owing to a crop shortage and a strong demand. Other staples are steady, with a strong tone still prevailing as to linseed oil. The demand for staples is moderate, but there is a remarkably fine business doing in prepared paints, varnishes and sundries. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5.10 to $5.25. No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.75 to $5; ditto, in kegs of 100 lb., $5.25 to $5.50; No. 1, in casks of 560 lb., $4 to $4.25; ditto, in kegs of 100 lb., $4.25 to $4.50.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In five-gallon lots, 60 to 85c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb.; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.30 to $2.40; white, $2.35 to $2.45 per gallon; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8 to 8½c. per lb.; cabinet glue, in bbls., 11½ to 12c.; emery glue, in bbls., 17c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.10; bladders, in 100-lb. kegs, $2.25; bulk in barrels, $1.80; bulk, less than barrels, and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.75.

PARIS GREEN.—Petroleum bbls., 13 to 15½c. per lb.; arsenic kegs, 13½ to 15½c.; 50 and 100-lb. drums, 14 to 16c.; 25-lb. drums, 14½ to 16½c.; 1-lb. packages 15½ to 17c.; ½-lb. packages, 17 to 18c.; 1-lb. tins, 16 to 18c.; ½-lb. tins, 17 to 19c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 8 to 9c. per lb.; and 9 to 10c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single barrels, 75c.; 2 to 3 bbls., 74c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

WINDOW GLASS.

MONTREAL.

There has been a quiet movement in this line at unchanged prices. We quote: First break, 50 ft., $2; second, $2.10 for 50 ft.; first break, 100 ft., $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

TORONTO.

A good stock trade continues, while import orders are coming forward nicely. Prices are firm, with a good demand recorded. We now quote: Star, under 26 in., $3.80; 26 to 40 in., $4; 41 to 50 in., $4.50; 51 to 60 in., $4.75; 61 to 70 in., $5; 71 to 80 in., $5.50. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days.

FOREST CITY GOSSIP.

Office of "Hardware and Metal."

London, Ont., May 27, 1903.

WHOLESALE hardware houses and all the manufacturers engaged in making goods handled by the hardware trade report active business. With the exception of the cigar workers out on strike, there are no idle workmen in London; indeed, some of the large factories could take on more skilled labor if it could be obtained. Fence wires are still in good demand; wire nails are also in request, and now binder twines and cordage are moving at a good pace. Paints, oils, varnishes and brushes are mentioned as being in good demand. Travellers who were at home on Monday are now all out this week again after business, but probably on account of the confusion caused by the holiday, orders are not very numerous; the same has been stated this week about orders by mail. The Waggoner Ladder Co. last week shipped some of their specialties on to Manson and Barr, hardware merchants, Palmerston North, New Zealand, via Vancouver.

* * *

The New Empire Foundry Co. are soon to be in a condition to intimate to the trade that they are ready for business, their new plant being nearly installed, throughout the buildings, for the manufacture of engine supplies, plumbing goods, etc. J. R. Minhinnick and Mr. Stevens, formerly of The Stevens Manufacturing Co., are among the directors of this concern.

* * *

The London Brass Works continue to ship goods and receive orders as fast as they can manufacture the goods wanted, and The London Machine Fence Co. are head and ears in bustle every day.

* * *

Wortman & Ward's workmen, in the foundry shop, attended in a body at the funeral of their fellow employe, Richard D. Madge, who had been in the service of the company for 20 years.

* * *

Harding & Leathorn, of this city, have been awarded the contract for the construction of the Strathroy waterworks, and will commence work in a few days. Between $30,000 and $40,000 will be expended on the work.

* * *

D. H. Howden & Co. say that business is very much better than they had expected it could be. Although every preparation for good business had been made, their brightest expectations had been much exceeded, and they say there are good prospects of a continuance of present conditions. Chas. H. White, of the London Rolling Mills, says they are very busy.

TESTING THE "PROGRAM AD."

By J. Troy

THE head of an old-established business informed me a few days ago when discussing advertising methods with him that program advertising did not pay.

He states that several years ago he came to the conclusion that the whole matter of program advertising was an intolerable nuisance, and decided to put a stop to it then and there. Hardly a week passed but that some of his best customers would approach him for a card in a program of some church or charitable entertainment. He was anxious to procure as wide a popularity as possible and at first acceded to all demands. Soon he found that he was getting more than he cared for. He commenced receiving practical proof that his reputation as an indirect but liberal contributor to baby shows, ice cream and strawberry feasts, concerts, amateur theatricals, etc., was becoming widespread. Feminine representatives of affairs to be held in localities outside of the immediate neighborhood began to call on him. If he declined to give them his card and pay a good price for it, he was met with the statement that if he would aid the affair in question, they, the solicitors, would make their purchases from him in the future, and would be able to influence much trade in their vicinity. The retailer was human, and, for a while complied, but finding that the anticipated extension of trade did not occur, decided to test the whole matter and shape his policy in the future by the results.

For about a month at a time, when functions of the kind mentioned were the most frequent, he made it a point to announce in his program cards that every person who would clip the ad. out and bring it to the store would receive a certain stated discount on goods purchased and a neat souvenir to boot. He got so few responses that he decided to put a stop to the whole thing and direct the money to more profitable methods of advertising. The ads in the program were evidently not read.

His decision to stop the matter of program advertising was strengthened by making the same discount and souvenir offer in his local papers. The returns were at least 20 times larger in number than from the programs. After that, whenever he was asked for a program ad., he politely refused. Of course, some were offended and withdrew their patronage for a time, but that they appreciated the rationality of his position is shown by the fact that he did not lose a single customer permanently, while he has gained many new ones, attributable to the use of more legitimate methods of advertising, which he could not afford to indulge in formerly.

HARDWARE DEALERS

are not usually troubled with **BUGS,** but the **farmers** are, and they will want **Church's**

BUG FINISH

to effectually get rid of them. One dose kills the bugs, and fertilizes the potato crop as well.

Bug Finish affords a good margin of profit to the dealer, and satisfies his customers. Write for prices, and order early.

STOVES AND TINWARE

THE METAL CEILING INDUSTRY.

THE tinsmith of the present day has a much wider, as well as a distinctly different, scope for his ingenuity than was true of the tinsmith of a generation ago. One development which has added much to the possibilities of his vocation has been the increased use of metal ceiling materials and kindred lines. This development has taken place largely within the last 15 years, but in that short time it has grown until to-day it includes practically every style of design from the commonplace to the most artistic, and is suitable for every sort of building, from a shed to a public building.

It covers the walls and ceilings of church and theatre, music hall and cafe, counting room, hotel lobby and store. They are toning it up to look for all the world like plastic decoration, in mezzo or low relief. In terra cotta hues it gives forth the rich effect of stamped leather, or in the heavy panelling for ceilings, with its deep cornices and fringes, it has a wonderfully solid and ornate effect. Of course, its use, in some cases, has been misinterpreted, and it has been misapplied and botched in many instances in a manner to destroy all its verisimilitude to what it is supposed to stand for. In this bungled form its wrinkles and bulges are much in evidence and it is a sad thing to look upon.

The history of the industry is interesting. The first effects were introduced from Germany, stamped in coppered zinc. They were reproduced in this country in zinc and, a few years later, in steel.

The metal ceiling is no longer a forced sale, it is recognized as a permanency in every city in the country. It gives employment to thousands in its transition from large metal sheets to its final resting place in the interior of buildings, where, in the finished state, it gives but little idea of the labor spent in its accomplishment. New designs in panels, cornices, cove and moulings follow close on each other, and the decorative treatment reflects the tone and coloring of the Renaissance and other periods in the art world. And it needs but little prophetic vision to foresee further advances toward perfection by the men interested in this industry of a decade. Whether it will supplant plaster is not a question. There is a need for the metal ceiling, and, to use a time-worn phrase, it fills a long felt want.

Securing the right results in stamping metal ceilings is not so easy as a great many people think. The dies must be accurate and have the proper amount of draw. The metal sheets must be of the right temper properly annealed tough, not brittle; added to which is required time, skill and patience on the part of the pressman to successfully do the work. Especially is this the case with deep, bold stampings, which must be brought out gradually, by successive operations and with greatest care. Failure to comply with these conditions means spoiled material, insufficient stamping and imperfect plates.

ST. JOHN TINSMITHS ORGANIZE.

The tinsmiths held a meeting last night for the purpose of completing organization. It was decided to send for a charter to the Amalgamated Metal Workers' International Association. The constitution was read and approved of. Their constitution among its many good by-laws provides for a board of arbitration to settle all differences that might arise between employer and employes. This rule no doubt will be considered a progressive one by the employers of labor, and it would be well if every organized body would provide such a by-law in its constitution.—St. John Sun, May 19.

"HURON CHIEF" RANGES.

The Western Foundry Co., Limited, Wingham, Ont., have issued a catalogue of their hotel ranges for use in hotels, restaurants, steamships, and railroads, as well as for private residences and public institutions. Full, illustrated descriptions of the many styles of ranges are shown. The introduction to this catalogue says: "The ranges illustrated on the following pages were originally designed and constructed by the members of the company, and since embarking into the manufacture of same on our own account we have made many improvements in them that now enables us to present them to our patrons in a higher state of efficiency and durability than ever before. We have in our company two members who are experts at designing, planning and laying out of kitchens, whose knowledge and experience is at the service of any one requiring same, and we shall be pleased to submit estimates, plans and specifications for the complete outfitting of kitchens, bakeries, etc., upon receipt of a request for same. We warrant and guarantee all our ranges to give satisfaction, and are willing to place them with any responsible party requiring one on 30 days' trial."

A copy of the catalogue will be sent to any reader of "Hardware and Metal" on application.

FLUE-DUST AND HOT-BLAST STOVES.

FROM some figures given by B. H. Thwaite in his paper on the effect of flue-dust upon the thermal efficiency of hot-blast stoves, it may be shown that each grain in weight of dust in a cubic yard of gas from a blast-furnace making 100 tons of pig-iron daily, represents nearly half cwt. of wasted ore, lime and coke. This half cwt. strictly complies with the definition of dirt as "matter in the wrong place" when it accumulates, as it does, in the hot-blast stoves. The fluxing action of the lime in the dust is pernicious to the chequer-work, but a still more serious disadvantage is due to the insulating or non-conducting properties of the dust, which materially reduces the absorption and evolution of heat in stoves, however often they may be cleaned. The loss of heat is equivalent to a consumption of over 1,000 tons of coke yearly on a 100-ton blast-furnace. To avoid this loss and other disadvantages, the author repeats his suggestion that stoves should be fired with producer-gas, and that all the blast-furnace gas should be used for the generation of power. It is held that the gas from blast-furnaces is the ideal fuel for gas-engines, and that the producer-gas could be used as a reserve for driving them if the furnaces failed. Instead of producer-gas, the waste gas from coke-ovens, after recovery of the by-product, might be used. Incidentally the author proposes a screen or curtain over the mouth of the down-comer when dust is charged directly into a blast-furnace. He is also rather keen on the treatment of dust in magnetic separators, so as to make it possible to concentrate the ferruginous constituents before briquetting. The separation of dust from gas by a modification of the old electrostatic method is a further proposal.

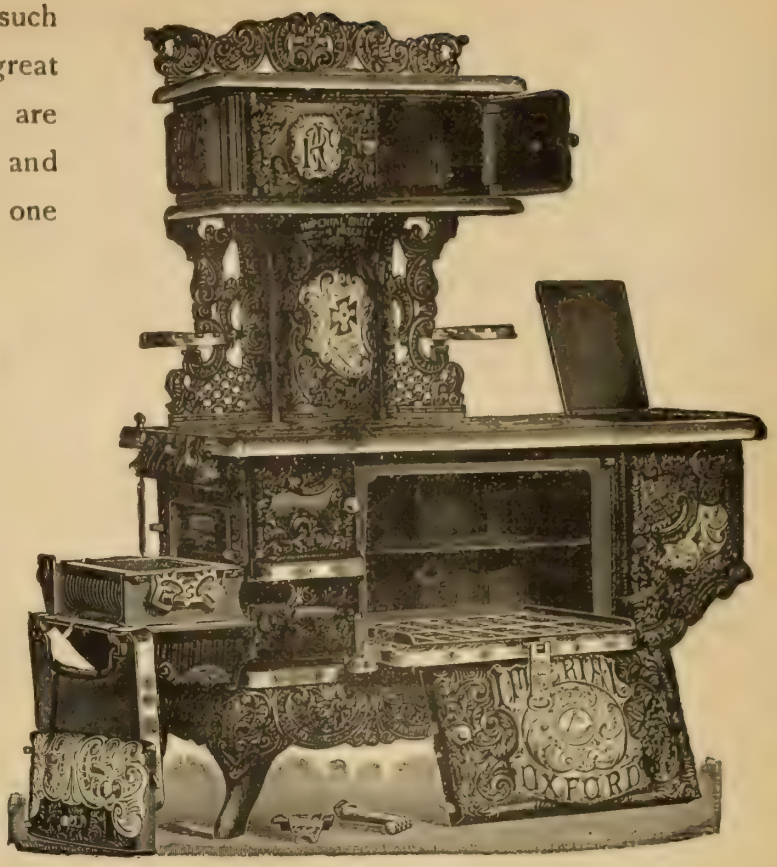
As in other things, it is but natural in such things as Ranges there are bound to be a great many kinds, and, for the same reason, there are bound to be some that are better than others, and among these better ones there will always be one best, and this one is not best by accident.

Imperial Oxford Ranges

are the result of over sixty years' experience in the production of cooking apparatus. It is without doubt the best range on the market. Easiest for you to sell—gives the best satisfaction when sold. **Write for particulars.**

The **Gurney Foundry Co.** Limited

TORONTO. WINNIPEG. VANCOUVER.



THE GURNEY-MASSEY CO., LIMITED, MONTREAL.

Wickless "Blue Flame" Oil Stoves.

A FEW REASONS WHY PREFERRED.

IT HAS NO WICK and is easily kept clean.

IT HAS NO JOINTS TO LEAK or packing nuts; no pressure of oil below the tank; it cannot leak.

IT DOES NOT GENERATE OR EVAPORATE, the oil simply drops into an open brass pipe through which it is conducted to an open burner ring where it burns, producing a powerful blue flame. Could anything be simpler?

IT HAS A REMOVABLE TANK which can be carried to an outer room for filling.

IT IS ABSOLUTELY SAFE.

IT LIGHTS QUICKLY, simply turn on the oil and apply the match.

IT COOKS INSTANTLY. There is no smoke—no delay. As soon as lighted a cooking vessel can be placed over the burner.

IT HAS NO STOPS or automatic regulators to govern the flow of oil. The flame is entirely under the control of the user.

IT MAKES NO DIFFERENCE what quality of oil is used, whether coal oil or gasoline, whether it is good or bad, heavy or light, thick or thin, hot or cold, the stove operates equally well, producing an intensely hot smokeless blue flame. Can as much be said TRUTHFULLY of any other stove?

IT HAS A GLASS SIGHT FEED which shows at a glance the flow of oil, and enables the user to regulate the valve quickly and accurately.

FOR ECONOMY OF FUEL as compared with the coal and wood stove it is beyond comparison. Will save what it cost in one season over coal or wood at the average price. It is a friend and helper to the thrifty housekeeper who tries to save what others waste.

ESPECIALLY is it a boon to the country home and suburban residence where fuel gas cannot be obtained.

LASTLY—It is safe, clean, quick, reliable and convenient, and no home can afford to forego the comfort that this wonderful stove brings.

The dealer who recognizes the merits of the "Standard" Wickless and places it on his sales floor will find it a ready and popular seller.

The THOS. DAVIDSON MFG. CO., Limited, MONTREAL, P. Q.

HEATING AND PLUMBING

HOT-WATER HEATING FROM A CENTRAL STATION.

IN these days when every foot of space in buildings is of value, and when that occupied by the heating apparatus and the fuel could be used to better advantage, it is of interest to know that a system of supplying heat to buildings from a central station has been tried and found to give good satisfaction. There should not only be a saving in room, but also in the cost of production. There would be less labor required to run the system for combined or district heating than there would be to operate the buildings separately.

It would appear from a paper read by C. W. Niles at a recent convention that the application of hot water in a return system of heating is receiving considerable attention and is the most preferable system, and is one in which economy of fuel and the wide distribution of heat at a minimum cost are worthy of attention. The system has been in practical operation in a great number of American cities.

"Two lines of pipe of equal size radiate from the central station through the streets and alleys; one for the outflow of hot water and the other for the return. These pipes are placed under ground in properly insulated boxes, branches of proper size being carried from each line for blocks or dwellings, which carry the water through the radiators. Pumps at the central station force the water through the outgoing lines of pipes through the radiators, and back to the station under a pressure of 20 to 30 lb.

"The loss of heat has been found by experience to be small. Water leaving the pumps at a temperature of 190 deg. will, after passing through the mains and radiators, be returned to the heater at an average of 165 deg."

Mr. Niles gives an instance where this system was used when the temperature dropped to 20 deg. below zero and entire satisfaction was given. There seems to be a possibility of giving a uniform temperature in offices and buildings of 72 to 75 deg. This result can be obtained by the complete control of regulating at the central station. There is a claim of superiority for this syetem over the steam for the reason that the water is returned to the heater with very little loss of heat, while the percentage of loss of heat by steam is much greater and is not so readily controlled, making it more difficult to give the same uniformity of temperature. A further claim for this system is that where the central station can be located adjacent to the waterworks pumping station or the electric light station, the waste steam from these plants can be utilized to still lessen the cost of production. Another feature is the possibility of furnishing not only heat, but hot water for the bath and domestic use during the winter and the pumping of ice water through the radiators during the hot season.

To arrive at an intelligent method of determining the radiation required for such a system E. F. Gwynn, consulting engineer of The Gwynn Central Station Heating Co., was recently asked to give his observations as to the requirements, and in reply submitted the following:

"The amount of radiation required for a building with our system is determined by different methods of calculation. The simplest method is to find the cubic contents and divide the amount by 35, which will give the amount of radiation required for the first floor rooms, and by 40 for rooms on the second floor. Of course, in this connection due allowance must be made for rooms that are more exposed than others and on the exposed side of the building, having a larger number of glass windows, and additional radiation must be added to the amount determined by the dividing factors named to make up for this increased exposure or cooling effect.

"It has been found that in our system smaller pipes can be used than with the ordinary gravity system. The largest pipe we use for houses containing 1,000 or 1,200 ft. of radiation is not necessarily over 1¼ in. in size, where, if the gravity system was used, the largest piping in the principal main would be 3½ or 4 in. in diameter. Hence it can be seen that with a central station system a considerable saving is made in the expense of equipment.

"I think that an ordinary gravity system will cost from 75 to 90c. per square foot of radiation when installed in a building. Our system can be installed at a cost of from 40 to 50c. per foot. This means complete installation, piping, valves, radiators, pipe coverings, bronzing and enamelling and everything that is required to complete the job.

"Our system of piping within the building we consider a great improvement in connection with the method of distributing water from a central heating plant. We run one main line, or a number of risers, just as may be desired, and as is done in a gravity system, reducing the openings at the radiator by means of a special valve, which admits just enough water to keep the radiators at a higher temperature. After the water passes through the radiator it goes to the return pipe and back to the central heating plant, and does not go through any other radiator or series of radiators, as is done in some systems. This has the advantage of keeping all the radiators up to the same temperature, and more heat is thrown off per square foot of radiation than when the water circulates through a series of radiators. Our system also provides a by-pass which allows any radiators to be shut off without interfering with the circulation of another.

"In our system it is not necessary, owing to the use of by-passes to circulate the water at the 50 or 60-lb. pressure that has been found essential to successful operation in the series of radiators system, and in supplying water to a building it is governed by the diameter of the pipes, which varies from ¾ to 1¼ in. for a residence. This, with the valve regulation at the radiator, we have found to answer every purpose and to be satisfactory to our customers. We have been careful to insulate our pipe lines, and then to protect the insulation by laying them in tiling that is thoroughly drained."

MUNICIPAL OWNERSHIP.

IN these days of agitation for public ownership there seems to be no limit to the distance the reformers (?) would go. Like in all reforms there is in this a possibility of going to an extreme. Even in conservative England the municipal-ownership movement has reached a remarkable stage. In an address before the Ironmongers' Federated Association, in convention at Sheffield, President Edwin Verity said: "In reference to municipal trading, the time has come when the brake must be applied, or the movement will get beyond control. You will all have noticed that Parliament has again appointed a parliamentary committee to go into this matter, and it behooves, not only our federation and association, but all trade organizations, to

VARNISH REMOVER
PAINT REMOVER

Are you never asked for it? Here it is! Cuts through varnish in a minute. Paint takes a little longer, but it does it just the same. Saves time, saves the wood, saves temper, injures nothing, contains no acid, does not stain or burn the fingers, and there's money in it. Every painter, every varnisher wants it—must have it. You can sell it for $3.00 and make a good profit. Want to see a sample? We'll mail you one. Commence on

as gas or the sale of coke. I am unable, personally, but I think corporations are the proper parties to own and control such undertakings as the water supply, gas works, tramways, electric lighting, with the control of the streets in the way of taking them up and relaying at convenient times should be in their hands. But, after transferring these commodities from the central power to the purchaser's premises, their work should stop.

"When they become traders, as we know they have done, by supplying gas stoves, gas fittings and electric fittings, they are entering into competition with the ratepayers—the very power which helps to keep them in existence. And this I hold to be opposed to true economic law. You will have noticed that they have already been gradually creeping on, and if they continue, we shall have corporation ironmongers, drapers, grocers, and even corporation co-operative societies.

"I have seen published statistics of some corporations which have shown considerable loss in this class of trading. Surely it will be to their advantage to leave this part of the business to be done by those who pay the rates and are fully qualified to do the work."

Mr. Verity fully explains the evils of that branch of the subject and it requires no further comment. It just goes to show how far corporations can be carried away. What might be a public benefit is made an evil.

U. S. NATIONAL CONVENTION.

THE 21st Annual Convention of the National Association of Master Plumbers, held in San Francisco, May 19, 20 and 21, was a great success in every particular. Most of the States had their representatives at the convention. The president's report showed a very successful year's work and the association to be in a flourishing condition.

Not only was the business of the convention carried out to a successful issue, but the entertainment of the delegates by the local association was of a very enjoyable and entertaining nature. J. E. Brett, on behalf of the San Francisco local association, introduced the Mayor, who welcomed the delegates to the Metropolis of the "Golden State," so called, not because you could pick up golden nuggets in the streets, but of her golden fruit, her golden climate and her golden hospitality for the stranger from every part of the country.

The greetings sent by the Ontario Master Plumbers' Association through their president were received with applause.

In the opinion of the Committee on Resolutions, local troubles should be settled by local associations, and they gave their disapproval of adopting general rules for regulating trade matters. President Hornbrook's administration of affairs and the work of the Executive Committee, also the Cleveland Resolutions, were endorsed.

The general report was that the Cleveland resolutions were very popular with the craft. The new officers elected for the ensuing year were:

President, E. D. Hornbrook, Kansas City, Mo.; vice-president, David Craig, Boston, Mass.; secretary, J. H. Richardson, Kansas City, Mo.; treasurer, W. E. Goodman, Milwaukee, Wis.

St. Louis was selected as the place for next year's convention. The usual vote of thanks brought to a close what was one of the most successful conventions of the association.

ALAS THE POOR PLUMBER.

There seems to be no place upon the face of the globe where a plumber can carry on his business without having rash statements made about him. He must be patient. According to an English exchange, The Hardwareman, the Ironmongers' Federated Association, in convention recently in Sheffield, got quite warm over the Plumbers' Registration Bill, which had been introduced into Parliament by the Worshipful Company of Plumbers. The president made an exhaustive reference to it in his annual report and called upon J. N. Greenall to speak to the subject. Mr. Greenall replied, and in his remarks is reported as saying that the plumbers were the most aggressive people he ever had to deal with. A motion in condemnation of the bill was passed. Canadian plumbers are generally looked upon as philanthropists(?).

PLUMBING AND HEATING NOTES.

TORONTO.

At the last meeting of the Master Plumbers' Association S. Ryding, R. Patterson and W. Lowndes, of Toronto Junction, were admitted to membership, as was also J. J. Linton, Queen street east. Several committees were appointed to carry out some suggested reforms. Good interest is being maintained, notwithstanding the extreme heat. There was a very large attendance.

E. Maxwell spent the holiday fishing. Unlike most fishers he admits he never got a bite. Frank is more successful when he tenders on plumbing and lands quite a few contracts. He reports business in good condition.

Anyone who wants to hear a proper fish story ought to drop in on W. Mansell, of Purdy Mansell & Co. He is just as practical a fisher as he is a plumber—a little more enthusiastic, and there is a certain amount of elasticity about the size of the fish caught.

President Robert Ross spent the holidays rusticating on a farm near Port Credit. According to his critical eye the crops are all right.

Lucknow, Ont., is considering the advisability of municipal ownership of the electric light plant and may take it over and run it in connection with the water works.

W. S. Jackson, 71 York street, now has his showroom in good shape. He reports a good demand for all lines, with a ready sale of his "Granite" laundry trays.

F. N. Cullen, manufacturers' agent, 79 King street east, who has been hampered by his showroom not being completed, has now everything in excellent shape. He is showing some fine goods.

The brass manufacturing works of the Robert Mitchell Company at Ste. Cunegonde, a suburb of Montreal, were completely destroyed by fire. The loss is estimated at about $150,000; insurance, $100,000.

The continuance of the strike is causing uneasiness among the trade. Last year was much upset by the action of the journeymen plumbers, and now the striking of other trades is materially affecting building operations, reducing business all round.

QUEBEC.

The large warehouse on St. Paul street to be occupied by the Mechanics' Supply Co., is now being rapidly built, and the contractors, Sharpe & Lamonde, intend losing no time to have the building ready for the fall. This building will be a great improvement to this locality and will be one of the most handsome warehouses in the city.

MONTREAL.

J. W. Hughes, one of the most popular members of the craft here, has taken his son, W. J. R. Hughes, into partnership. The firm style is now J. W. Hughes & Son. Mr. Hughes, jr., is a practical man, and has been a valuable member of his father's staff for some time.

WINNIPEG.

The plans for Benetto's $60,000 business block on Portage avenue, prepared by Architect Frank E. Evans, call for fire proof premises, the structural work to be of iron and steel, the lighting by gas and electric light, heating by hot water, and the plumbing of the most modern style.

The Bole Drug Company's building, to be built after plans prepared by Architect Russell, is to cost $15,000, and will be of solid brick. The Vulcan Iron Works have the contract for the iron work, but the contracts for the plumbing, heating and light systems have not yet been let.

BUILDING NOTES.

About $20,000 will be spent on an addition to St. Anne's Academy, Vancouver. W. Blackmore & Son are the architects.

Bolton, Ont., Methodists purpose improving their church to the extent of $2,500.

The Sisters of Mercy, Ottawa, will build a large convent on Cambridge street, to cost $35,000.

The contract for the building of a new foot iron bridge at Petrolia, at a cost of nearly $6,000, has been awarded to Geary & Lewis, London, Ont.

The Alwington Spring Hotel Co. have been incorporated at Kingston and propose erecting a 100-room sanitarium on the old Morton distillery property.

Wiarton, Ont., citizens will be asked to pass upon two by-laws, one to vote $25,000 to the Beet Sugar Co. and the other to vote $10,000 for civic improvements.

Elkhorn, Man., is showing signs of a boom in building. A new station and round-house will soon be under construction; a large store is now being built, and three fine cottages are under way.

Orangeville, Ont., property owners will vote on a by-law to give $2,000 for a free site and exemption for ten years to the Superior Portland Co., who are to erect and run a $100,000 building and plant.

Representatives of The Imperial Elevator Co. were in Cartwright last week measuring out a site for another elevator, which is to be built here as soon as the material arrives.

The C.P.R. are spending $100,000 on permanent improvements to their plant at Moose Jaw, N.W.T., this year.

BUILDING PERMITS ISSUED.

TORONTO.

St. Paul's Church, alterations and additions to church, 87 to 115 Bloor street east, to cost $25,000; E. J. Lennox, architect.

David Elliott, additions to paper box factory, 76 Nelson street, to cost $1,500.

E. B. Allan, three-storey brick factory, north side of Pearl street, to cost $8,000; Gregg & Gregg, architects.

Dancy Bros. & Co., pair of semi-detached dwellings, 170-172 Spadina road, to cost $7,000; Langley & Langley, architects.

J. D. McMurrich, dwelling, east side of Huron street, near Dupont, to cost $3,000; Chadwick & Beckett, architects.

Mary W. Wilson, pair of solid brick dwellings, east side of St. Clarens ave., to cost $4,600.

OTTAWA.

Sisters of Mercy, stone convent on Cambridge street, to cost $35,000.

Geo. Matthews Co., Limited, alterations to shop front on Bank street, to cost $1,200.

W. D. Morris, ironclad coal sheds on Mosgrove street and Mill lane, to cost $1,000.

Daniel and Christinia McCuaig, brick veneered dwelling on Rochester street, to cost $1,000.

Robert J. Brown, brick-veneered dwelling on Fourth avenue, to cost $1,100.

P. J. Bois, tenement row of frame dwellings on Preston street, to cost $1,200.

VALUABLE CONTRACTS.

William Smith, the well-known plumber of London, Ont., has secured a number of valuable contracts in and near the principal avenues. Since moving to his present place of business he says a visible improvement is noticeable.

PROVINCIAL REPORTS SENT OUT.

In accordance with instructions from the Ontario Provincial Executive, Secretary LeGrow has mailed to all master plumbers in Ontario a printed copy of the report of the proceedings of the recent convention held in London. It is replete with all the work done by the delegates and should be of very great interest to all master plumbers throughout the province. While there was a very large increase in membership during the year there are still quite a few without the pale of membership. It is desired to so interest these master plumbers that they would at once identify themselves with the Provincial Association or, where practicable, to organize a local association and become affiliated with the Provincial. Enclosed in each report is an application form with a request that it be filled in and mailed to the corresponding secretary, who will be glad to give any further reasons why it would be to the advantage of all to be united with the craftsmen.

U. S. STEAMFITTERS' CONVENTION

The 15th annual convention of the National Association of Steam and Hot-water Fitters was held in the city of Washington last week. A very large delegation was present. The president, in his report, stated that the association was on the best of terms with the manufacturers and that they had cause to be grateful for the result of the year's work. One of the important subjects before the delegates was the endeavor to discount the custom of the jobbers selling direct to the consumer, which was claimed to be an injustice to the trade.

The election of officers resulted as follows:

President—Henry L. Hall, New York.

Vice-President—P. Gormly, Philadelphia.

Treasurer—Albert N. Chambers, New York.

Board of Directors—A. E. Kenrick, Brookline, Mass.; E. D. Smith, New York; John T. Sadler, Elmira, N.Y.; John D. Hibbard, Chicago; Harvey Middleton, Baltimore.

Sergeant-at-Arms — Geo. A. Sellers, Washington.

Secretary Henry B. Gombers was re-elected to that office for the seventh term by the Board of Directors.

NEW LIST ON "MONARCH" NAILS

A new list has been issued on "Monarch" horse nails. It reads as follows: No. 1, $2.50; No. 2, $1.50; No. 3, 75c.; No. 4, 48c.; No. 5, 32c.; No. 6, 28c.; No. 7, 24c.; No. 8, 22c.; Nos. 9, 10, 11 and 12, 20c. per pound. The discount has also been changed from 60 per cent. to 65 and 10 per cent.

[illegible] to manufacture and deal in [illegible] and other apparatus for the [illegible] of food products, and to manufacture, buy or sell food products. The directors of the company are F. A. Wa[illegible] D Bourdeau and M. E. Em[illegible] the capital, $500,000.

R. M. Ballantyne, Montreal, has purchased a site in Stratford, Ont., on which it is reported he will erect a three-storey, 70 x 10 ft. factory building for the accommodation of the Cardigan Overshoe Company and the Ballantyne Dairy Supply Company. The new building will have all modern improvements, and work will be commenced as soon as possible.

SUBSTITUTES FOR COPPER.

THE question of substitution of other metals for copper is one that comes up periodically. Aluminum is often mentioned as the metal that is to displace copper almost entirely. There is little likelihood of such a consummation, unless aluminum can be made at a fraction of its present cost. Aluminum is the most common of all metals, being the base of every clay, but it is reduced with great difficulty, and at heavy cost, by electrolysis, but it is a useful metal, with a distinct sphere of its own. Several of its alloys are of much utility, and the pure metal, owing to its lightness, is available in many places where steel and copper are less desirable. Aluminum has fair electrical conductivity, but is not apt to replace copper to any great extent for electrical uses, unless aluminum goes down and copper goes up in cost.

In lines other than electrical, copper has many substitutes. These come into use when the metal is high, and go out when the cost of copper falls. Like all other commodities, copper finds its level. High prices encourage substitutions and decrease consumption in other ways, while low prices encourage the substitution of copper for other materials in many places. The true value of copper, is, like the true value of all other commodities, the price at which enough metal can be produced, at a fair profit, to supply the world's legitimate requirements at a reasonable price. An era of high prices stimulates production and restricts consumption, with an eventual collapse of prices and trouble to producers. An era of low prices restricts production, stimulates demand and plainly foreshadows future grief for the consumers.—From The Copper Hand-Book.

THE STRATHY WIRE FENCE CO.

R. L. F. Strathy, Owen Sound, Ont., has filed a petition at Osgoode Hall, Toronto, to have The Strathy Wire Fence Co. wound up and its affairs investigated. Mr. Strathy is a creditor for $166, an endorser on the company's notes for $6,700, a shareholder for $5,000 and was secretary-treasurer of the company.

In his petition the applicant states that the company was incorporated in February, 1901, with a capital of $200,000 in $50 shares, of which 100 shares were subscribed and $19,000 paid up. The company assigned on March 16 last to G. S. Kilbourn, the assets being then valued at $31,000 and the liabilities at $21,000.

It is alleged that on April 11 the plant and assets were sold to J. E. Keenan, a director of the company, for $16,000, without any public sale being advertised, Keenan purchasing on behalf of himself and R. P. Butchard, the president of the company, and A. J. Creighton, a director. These three gentlemen have been carrying on the business since April 13, and the petition states that they offered to resell to the petitioner for $30,000. The petitioner asks that the affairs of the company be investigated; that the sale be declared invalid and set aside, and that the court wind up the company.

LARGE OUTPUT OF COKE.

MORE coke is being made in the Connellsville regions than the furnaces are consuming. For the first time in many months the output exceeds consumption. At the present rate both shipments and production in a short time will beat all previous records. Conditions are equally as favorable in both the Connellsville region proper and the Lower district. The operators had less to complain of from the railroads last week than at any time since last summer. The big companies reported a full run and there were very few of them that had to close their plants down for lack of cars. This improved condition on the railroads and the consequent prompt delivery of shipments will soon have its effect on the price of coke. It is several months since coke was quoted in the open market at the listed prices. Spot delivery prices were the only ones that ruled, because the consumers who had contracts placed were unable to get their coke out of the region with any degree of certainty, which resulted in their having to go out into the open market and buy wherever they could and at the prices named by the operators. The quoted price of furnace coke at present is $3.25 per ton, and it will not be long until it can be bought at the ovens for this figure. Operators who contracted for the summer output at that figure are considered well off according to the present outlook. However, prices are yet some above this figure, and while there will be a settling down to normal conditions if the railroads are able to move production out of the region and furnish empty cars each day, still prices will remain at profitable figures.—Connellsville Courier.

CANADIAN COMPUTING SCALES.

The Wilson scales have been before the world for over 50 years and have agencies all over the country for their improved scales. The bearings are the patent combined agate and ball-bearing that have lasting qualities. Their simplicity is so complete that all the weighing is done without the aid of springs and they count the money at the same time as the goods are weighed. These scales were awarded the gold medal at the World's Fair, Chicago, and special medals and prizes at Paris, France, and Glasgow, Scotland. A large catalogue will be mailed free by writing C. Wilson & Son, Limited, Toronto, Canada.

Apollo galvanized iron commands more money and shorter credit—at wholesale —than any other—but saves the worker money.

CURRENT MARKET QUOTATIONS.

May 29, 1903.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors n this list, as the desire is to make it perfectly accurate.

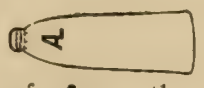
OUR TRADE A MARK — AUER LIGHT MANTLES LONGEST LIFE & BRIGHTEST — OUR TRADE A MARK

The Value of Annealing.

Annealing is the most costly step of mantle making—consequently a cheap mantle cannot be properly annealed—That is the reason a cheap mantle caves in like this if you lay it on its side, after burning off the coating—Try one—They injure your trade.

Mantles branded A are thoroughly annealed over pressure gas—They fit the burner—They don't shrink—They stand up this way—They are reliable—They help your trade.



—We are the sole manufacturers of A mantles.
—Write us if you are interested.

Lowest prices on Mantles, Shades, Chimneys, Globes and Sundries.

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, JUNE 6, 1903. NO. 23

Subjects Being Discussed at Ottawa.

Written for Hardware and Metal by a Member of Parliament.

House of Commons,
Ottawa, June 1, 1903.

SINCE our letter of a week ago nothing very new has come to the fore in Parliament, in committee, or in the corridors. The work drags rather slowly along, and the best informed now assert that August will still find the House in session. The same two dominant questions still hold the boards, one Imperial, in connection with Mr. Chamberlain's recent utterances anent closer trade relations with the colonies, the other domestic, re a trans-continental line. With regard to the former, the feeling of gladness at the prospect of something more substantial than a mere sentimental connection with the Motherland seems to be on the increase. The Imperialists, if we may use the term, elated over the brighter prospects which such a change of fiscal policy opens up for the Empire as a whole; the anti-Imperialists, satisfied that such new conditions would develop Canada, without in any way adding to her burdens or lessening her rights of self government.

* * *

It is undoubtedly a far call, however, from the announcement of a vague principle to the formulation of a definite policy, and while all great policies must undoubtedly have their inception in the announcement of a principle, wide divergencies are sure to occur between those who agree with that principle, but who have very different ideas as to its enforcement. For instance, we can imagine the Englishman saying: "Yes, we live this idea, we endorse it, but we must not be heavy financial losers by the change, since charity begins at home. At present but a small fraction of our trade is with our colonies, and discrimination in their favor is almost certain to lead to loss of commerce with outside nations. You must then give us such privileges in your markets as will increase our trade with you to the extent to which we lose it with others. You must lower your tariff, so that we may ship more goods to you."

To this the colonial will almost certainly reply: "True, charity does begin at home, but our home is here, in Canada, or Australia, as the case may be. And, while we will gladly take more of your goods and less of similar goods from foreigners, we are not willing to take more of your wares at the expense of our manufacturers of similar lines of goods. We are willing, then," we fancy we hear the colonial say, "to leave our tariff as it is against you at present, but to raise it still higher against similar lines of goods from foreign countries. This should mean that our buying of competing goods from them should entirely cease, and that our trade with you would increase just to that extent."

And then will come the question on the part of the Englishman: "Will this transference of trade from foreign nations to us compensate us for the loss of a portion of our foreign trade?" If he feels that it will, a bargain can with ease be made, but if he thinks not, he will still insist on a lowering of duty on such goods as are made in the colonies themselves, that he may add to his increased volume of trade, wrested from foreigners, enough more taken from the colonial manufacturers to make up for the sum total of his loss of foreign trade entailed by his colonial preference. For the advantages which a preference on raw and food materials in the English markets would undoubtedly give the colonies, they, in turn would, no doubt, be willing to some extent to lower their tariff against English goods, but to a very moderate extent, indeed, and not to the extent of crippling one single legitimate industry which had grown up on the home soil.

* * *

Looking carefully at the matter in this way, any one must see the immense difficulties which will confront those who try to adjust matters in conformity with the suggestions of Mr. Chamberlain. But difficulties as great, perhaps greater, have before now been overcome, and while some may even have to suffer in the readjustment, we must remember that without pain the world cannot be in travail to the birth of an Empire.

* * *

We said at the beginning of this article that the building of another trans-continental railway was the matter of chief domestic import before the Parliamentarians this week. A somewhat lengthy and spirited debate on the Intercolonial Railway, it is true, was the main object of interest in the House itself, but this was largely influenced by the question of further railway building in Canada on a large scale.

There be some, not many, but still influential, who advocate the building of the new road, and its operation thereafter by the Government, and as these are always met by the request to study the history of the Intercolonial -the People's Road—it was but natural that the speakers should devote a considerable part of their time to the attack and defence of the I.C.R.

* * *

Mr. Blair opened the ball, as a preface to going into supply for his department, and quite naturally made the best case he could to show that the Intercolonial if not exactly a thing of beauty and a joy for ever, was, nevertheless, far from being the bug-bear it is so often painted.

...ent he argued elaborately to show that ... system was operated as efficiently ... inexpensively as the C.P.R. or the G.T.R. He pointed out that the road, built as a part of the bargain by which the Maritime Provinces came into Confederation, was handicapped at the outset by the circuitous route thus forced upon it, a route traversing long distances of barren fruitless country, which was not, and never could be revenue-producing for the road.

* * *

Mr. Blair has openly advocated the extension of the I.C.R. as far as Georgian Bay, and it was quite to be supposed that he would justify his wish in this manner. To say the truth, he made a very stout argument, and though he probably failed to convert very many to the scheme of further Government ownership, he at least did much to account for the failure of the I.C.R. to be self-supporting on grounds other than those of extravagance and political evil influence.

To get net results for the treasury it is a truism to say that we must have a surplus of receipts over expenditures. In criticising the speech of the Minister of Railways, we would say that he succeeded fairly well in showing that on the expenditure side his road bore a not unfavorable comparison with the other great trunk lines, the C.P.R. and the G.T.R. From the sworn returns made each year by the railways, in accordance with the law in that behalf, Mr. Blair compiled the following table as to the proportion of earnings to each $100 of operating expenses :

G.T.R.	C.P.R.	I.C.R.
$154	$161.	$172

from which it will be seen that in the matter of operating expenses in proportion to earnings, the I.C.R. takes a better position than does either of her great rivals, and in the operating expenses on the basis per train mile, she still holds first place, the C.P.R. standing at $1.11 ; the G.T.R. at $0.93, and the I.C.R. at $0.91.

The Minister pointed out that out of nearly $6,000,000 which it took to operate the road last year, the two main items were wages and coal. The former alone absorbed $2,500,000, and the Minister made the statement, unchallenged subsequently by those who attacked his administration, that the wages paid were not excessive, not in excess of the wages paid on other roads for similar services. He followed out other smaller items of expenditure, which it would take too long to trace within the limits of this article, and certainly left the impression that on those lines of expenditure with which he dealt, a Government railway was administered with fair economy. Where lies contention that Government railways in Canada might be extended without a loss to the people seems to fall to the ground is in the items charged to capital account, and not mentioned in those charges with which he had been dealing.

* * *

The two main classes of this expenditure with which his critics, the Hon. John Haggart and Mr. Barker, found most fault, and one would think with most reason, were cars and rails. It seems that large numbers of new cars have been purchased and the total cost charged, not against the running expenses of the road, but to capital account, just as would be done in the extension of a business. Now, Mr. Barker contends that the total number of serviceable cars in use, when the Minister took possession, should be kept up out of revenue, and only additional numbers charged to capital. The same sound argument applies to rails. The Minister has replaced thousands of tons of old 65-lb. rails with new 80-lb. rails, charging the whole cost of the latter to capital, where he was only entitled to charge to capital the difference in value between the 65-lb. rails, at the time he took them over, and the new 80-lb. rails.

* * *

These would seem to be fair criticisms, and if the books of the I.C.R. were kept in this manner it would appear that the road is run at a very large annual loss to Canada, in spite of economies and efficient management in detail as shown above. How is this so ? one would naturally ask. You say the road is well managed, and yet is costing the people large annual sums. The answer is simple, and lies in the receipt side of the account. The Minister frankly avers that the rates charged on the Intercolonial are from 50 to 100 per cent. less than on the other lines, and says : " The business may increase, the cost of material may be enhanced, wages may rise, but the tariff for the carriage of traffic on the Intercolonial remains stationary, and we must figure it on that basis. We cannot raise it because our expenses are higher. Hon. gentlemen opposite and their supporters and their press would be the first to raise an outcry against us did we add anything to the tariff of the Intercolonial, and the political consequences, the disadvantages to us and the advantages to them would be so important that no Government would think of undertaking it."

In that paragraph lies the secret of the impracticability of Government ownership of railways in Canada. Mr. Blair told the simple truth. Political exigency is too strong for either party to operate so great an undertaking in the interest of the public and in that interest alone.

The pressure is overwhelming. A train service between two small unimportant points bi daily is found to be making a loss, and the management reduces the service to a daily one. At once comes a big petition from each of the towns effected, and reading between the lines the member to whom they are sent sees his political death-warrant, if the old plan of operation is not restored. He goes to his Minister, a Minister who ceases to be one the minute he loses a majority of these same imploring, beseeching members, and has a plain talk. The bi-daily service is restored. We may have stated the case too harshly, but not very much so, we feel sure, and the fault is not confined to one party, for in politics as in life, " sell-preservation is the first law of nature." And a very potent law it is.

* * *

The further argument with which Mr. Blair bolstered his assertion that rates on the I.C.R. could not be increased, was that from almost all points this road, following as it does the coast line for so many miles of its course, was subject to keen water competition, and that a raising of tolls would surely be followed by a loss of business, which would make the latter state of affairs even worse than the present. With this, of course, in the general discussion of further extension of Government ownership, we have nothing to do, but we state it in justice to the Minister to acquit himself somewhat of the charge that he is governed entirely by the political exigencies of the case. If the Government undertook to own and operate a new line, a proper selection of the route would perhaps free it from many of the disadvantages under which the I.C.R. labors. It would not need to be so circuitous. It would not come in competition with water carriage to the same extent, while, at the same time it would, as in the case of the I.C.R., have long fruitless tracks through which to pass before the older provinces were finally connected with the prairies of the West.

The " political-exigency " argument still remains, and, unfortunately, it alone is strong enough, in face of Intercolonial experience, to make the average man shudder at the idea of the extension of

a system which has thus far cost this country so dear.

* * *

A larger party of members on both sides of the House are advocating the construction of the new road as far as Winnipeg by the Government, and the leasing of wheelage rights over it to any road requiring the same. The argument is used that this would give a control of freight rates, just as the Erie Canal, while not in itself a paying investment, has paid the Americans for its construction in the way in which it has kept down the tolls of the railroads. Many opposed to this scheme fear the opening of the door to corrupt bargains, which the expenditure of such a large sum of public money would more or less mean, and these point out that terms could be made in any contract entered into with a state-aided road by which other lines would have running rights over it, and the Government would retain the right of controlling the rates, or at least of fixing a maximum tariff from time to time. The expectation is pretty general that what will happen is the granting of aid of some kind to some road upon conditions.

* * *

Against the assistance taking the form in whole or in part of a land grant, there seems to be so strong a feeling that that is practically out of the question. Why this is so among eastern men it is hard to say, unless they have allowed themselves to be stampeded by the arguments of certain excitable journals, and of the men from the West. Older Canada bought the West and paid for it. It is the West that will most largely benefit by the building of the road, though we admit a measure of mutual advantage, and to give some land now perfectly valueless to make the balance valuable would seem good reason and good business. A certain time might be limited within which the road would be obliged to dispose of those lands ; a certain maximum price per acre might be fixed ; regulations as to taxation for school and other purposes could be framed. In a word, profiting by our experiences of land grants in the past we might so make our new conditions as to reap the advantages without entailing the old evils. A large part of any new line built to the West must of necessity pass through Ontario. Would any one be found to say that that Province, should it be forced to supplement Dominion aid, would not be better advised in giving, say, 4,000 acres per mile in the wild and unexplored part of New Ontario, than in handing over a cash subsidy of even $2,000 per mile ? Yes, there will be found many to say so, but their arguments are surely ill-founded.

* * *

It is quite amusing to hear certain members say, I would give them this, that, or the other thing, and not another farthing. Does it occur to these honorable gentlemen that there are always two sides to a bargain, and that what we might be only too glad to give the other parties might refuse with scorn? We want this new road, we want it badly, and we want it now. We want it not for commercial interests only, but for political objects of the highest import, none less than to bind the East to the West past the possibility of a severance.

* * *

Consider the large and rapid influx of Americans in the new land, and ask yourself if this is any time to trifle, to allow trade to find channels south from that land of promise, instead of east, to perpetuate the American feeling with which our friends naturally come to us, and which it is the part of statesmanship to convert into strong Canadianism. Let us in all conscience make the best bargain we can, but for heaven's sake let us make our bargain, and make it now. Better far even to sacrifice a few millions to get this great enterprise under way, than to delay it in a carping spirit at the cost of the establishment of American trade channels from our West while we are sitting timidly counting the cost, channels once established hard to destroy, and let us have a care less the converse of the proposition that " Trade follows the flag " come upon us, and we find too late that the flag has followed trade to its effacement.

* * *

I have said let us make the best bargain we can. There is no reason why a good one should not be struck. We have the Mackenzie & Mann system as a bidder, a system now an established fact, and a credit to the enterprise of those clever Canadian gentlemen who have made it what it is. We have the Grand Trunk ready and anxious to undertake the work, and we have the Trans-Canada, which, if

WORKING TOGETHER.

Next to the recognized high quality of ***The Sherwin - Williams Paints and The Sherwin-Williams Varnishes,*** the principal reason why S.-W.P. agents are more successful than other paint dealers is the way we work with them.

To get a good agent is only half our aim, the other half is to help him build up his paint business. We work with all our agents from the very moment they place our goods on their shelves. We believe that it is an essential part of our duty to help keep our products moving off the agents' shelves. It is by practising that belief that we have been able to build up the largest paint and varnish business in the world.

Our booklet "B—13" describes fully the way we shall work with you if you will take the agency for our products. Write for copy to-day.

At present not as financially strong as the other two, could yet very well undertake the task and find the capital if the necessary Government assistance were forthcoming.

* * *

The path of the Government in this matter is by no means an easy one, and the people of the country, irrespective of parties, should strengthen its hands by the suppression of sectionalism and the upbuilding of a broad Canadian sentiment which will uphold whatever can be pointed as in the interests of this land as a whole, independent of its particular effect upon any locality.

FOREST CITY GOSSIP.

Office of HARDWARE AND METAL,
London, Ont. June 2, 1903.

ANOTHER good week's business has been done by the hardware houses, both wholesale and retail. The sorting-up season is, and has been, very good. Money appears plentiful; dealers are paying their bills satisfactorily, and few failures are taking place. That such a condition of trade might always continue is a thing to be earnestly and devoutly wished for. The prospects for good fall business never were better in Western Ontario. The goods reported by wholesalemen as in greatest demand are oils, paints, cordage. Lawn mowers cannot be procured in sufficient quantity to fill orders. In explanation of this latter circumstance John Bowman, of The Bowman Hardware Co., says the Canadian makers of mowers on whom the trade has depended for supplies, have been exporting too largely, and are now unable to cope with this season's heavy demands for domestic needs.

* * *

Alvin Johnston, in the employ of D. H. Howden & Co., wholesale hardware merchants, was married in Woodstock last Monday. May his shadow never grow less.

* * *

William Goodall, a member of the office staff of the Bain Waggon Co., of Woodstock, Ont., has come to reside in London, and is filling a position in the G T.R. freight office.

* * *

The Colonial Oil Company, of this city, has been granted a charter. The company has a capital of $100,000. The provisional directors are J. H. Stewart, R. J. Copeland, D. S. Robb, W. E. Raney, G. A. McGillivray.

* * *

The new foundry of the McClary Company is to be opened on Saturday, June 6, with considerable eclat. A strong committee of the employes have arranged games and amusements galore for the afternoon on Chelsea Green, opposite the new foundry, while a picnic is going on. Invitation cards have been also issued to the sumptuous entertainment in the new mounting shop, to begin at 7.30. The friendly relations existing between this firm and their employes is noteworthy, and could well be emulated by every manufacturing concern.

* * *

During the weeks between seeding and haying the majority of farmers find work to do renewing and repairing their fences. This being a particularly favorable year for such work, advantage has very generally been taken of the opportunity, and fence wire has been, and still continues to be, in heavy demand. Much coiled spring wire is used in this vicinity, and the London fence machine for erecting fences with this wire is very popular and gives solid satisfaction to the thrifty farmer.

* * *

The commercial travellers of London are meeting with much encouragement in their arrangements for their big annual picnic to Port Stanley on August 1. Ten thousand celluloid badges have been issued, one side of these having the date of the picnic; the other side that of the Old Boys' reunion. As a result of wide advertising the picnic is being talked about by drummers all over the country and places across the line. Travellers will attend in numbers from Toronto, Cleveland, Detroit, Buffalo and elsewhere. Among those who attended the meeting to arrange preliminaries on Saturday night last were H. E. Buttrey, presinent: James Mattinson, John Bowman, Frank Lawson, W. E. A. Best, E. W. McGuire, E. A. Crosier, J. J. Harkness, Thomas Nopper, J. J. Dyer, J. W. Couse, Wm. Watson, A. H. Moran, George Detlor, Fred Brenton, H. W. Lind, E. R. C. Struthers, Fred Kerrigan, L. H. Scandrett, Wm. Smith, James A. Smith, Geo. Munro, J. M. Ferguson, S. M. Sereaton, Alf. Gunther, S. F. Glass, F. A. McCormick, J. A. Connor, J. S. Townsend, J. A. Tune, C. E. Perry, B. S. Sainsbury, E. L. Sifton, J. L. Whitehead and James Herrick.

* * *

Chas. R. Wills, a commercial traveller residing on Queen's avenue, this city, was on the train at the accident at Komoka this week. He was thrown over a seat, having his forehead cut, and left leg and hip sorely bruised.

* * *

The failure of the big banking firm in Toronto will not seriously affect any resident of London, Ont. A number of Forest City people were holders of stocks with Ames & Co. until a week or ten days ago, but had disposed of their holdings just prior to the big drop in quotations. W.H.L

A NEW MATCH STRIKER.

The "Double S" Manufacturing Co., 40 Scott street, Toronto, are placing on the market a new idea in match safes, the "Patent Lightning Striker." They have applied for patents in every European country, and are already protected in Canada and the United States. It is certainly a neat little contrivance of pretty design and would be an ornament to any room in the house.

HOG TROUGHS IN DEMAND.

W. Gordon, Tweed, Ont., is meeting with great success with his steel hog troughs. Last week he sold an agent in a small village of 900 inhabitants 1,000 ft. of trough. This agent started to sell in small quantities, and found them such good sellers he placed an order for this quantity to control the territory. Write for an agency.

MACHINERY

THE BATTLE OF THE FORCES.

THE rapid development of modern machinery, and particularly the important part played by the element of speed, is causing machinists to be reminded of the existence of natural laws and forces whose intangibility is in no way commensurate with their irresistible operation.

The force that impelled the stone which laid low the scriptural Goliath, the invisible power that keeps the rider in position when he "loops the loop," and the power that prevents the earth from falling into the sun, are one and the same. Centrifugal force—the tendency of a body moving in a circular orbit to fly off at a tangent—would be responsible for many strange happenings were it not for the counterbalancing power known as centripetal force, which binds the circumference of a revolving body to its centre.

In a body at rest these forces are non-existent, but when a solid mass is revolving at a high rate of speed, the battle of the forces commences in real earnest.

Instance a recent accident at Port Hope, where fragments of a grindstone that revolved with unbecoming speed, separated from the parent body and, following a tangential path indicated at the moment of severance by this centrifugal force, made their undignified exits through the shingle roof and the windows of The Nicholson File Works. Reuben Rouse, the workman in charge, commenced his speedy retreat by way of a window, and was materially assisted at the proper moment by the impact of a small fragment, which, striking him on the hip, hurled him into the yard with some despatch. Fortunately, no one was injured, but this is not an isolated example, for bursting flywheels and grindstones are now reckoned among the accidents that render a machinist's insurance policy a high risk.

B.

THE NEW HIGH-SPEED STEEL.

Oberlin Smith, in The Engineering Magazine, devotes some attention to the new high-speed steel, now being produced in both America and England. "Not only," he writes, "will these new tools cut two-fold or three-fold faster than the best tool steel of the recent past, but their durability is in some cases amazing, as when a lathe tool will run several hours in cutting forged steel with no sharpening except perhaps a slight filing off. In some cases the chips will be heated to a dull red with the tool nearly as hot. When working efficiently it is never expected that the chips will come off as bright metal, the heat naturally discoloring them to a deep blue, or beyond the blue stage to a greyish black. Water upon the tool is of some advantage, but, fortunately, the new steel does excellent work when perfectly dry, thus avoiding the inconvenience of wet cutting. Furthermore, some of this steel seems to delight in being abused, maltreated, and persecuted to the utmost degree. One kind recently tested apparently suffered not at all by having its cutting edge burnt to the melting point.

LARGE STEAM ENGINES.

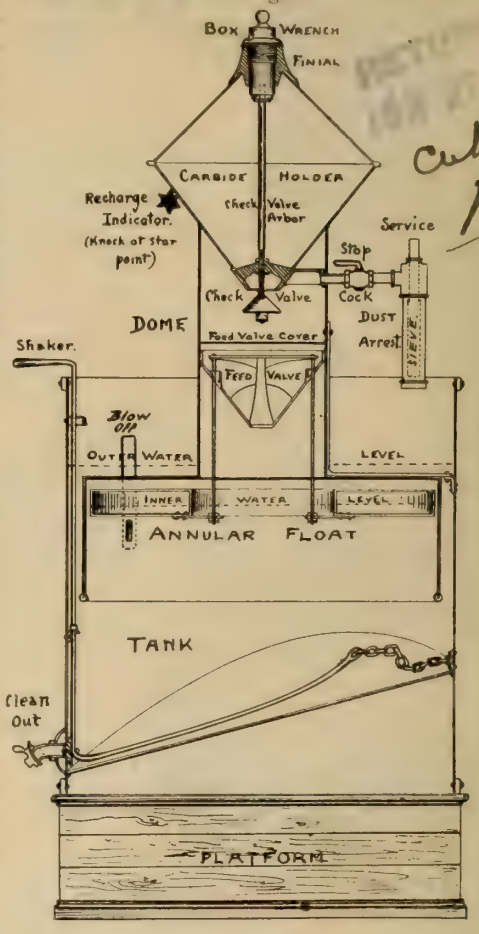
The Vancouver Engince ing Works have turned out for the British Columbia Mills, Timber & Trading Company the largest engine ever manufactured in British Columbia. The engine was built on the plans of the large engines used in the states of Washington, Oregon and California. It has cylinders 10 in. in diameter by 15-in. stroke, and the bedplate is made of 15-in. steel I beams. The main drum will hold 1½ mile of ⅞ in. cable. The boiler is 60 in. in diameter by 131 in high, and will carry a working pressure of 150 lb. of steam.

These large engines are necessitated by the fact of the timber having been cut off the waterfront and having to go further back to reach the available timber.

THE SICHE GAS MACHINE.

The private gas plant is rapidly gaining in popular favor, and, as every normal man believes himself possessed of a grievance against the gas company, the future of the gas machine industry should be assured.

We subjoin a cut of the interior construction of the Siche gas machine. Over two years ago The Siche Company started business at 83 York street, Toronto, and have had a most successful career. Last month they opened offices at 141 Bleury street, Montreal, where G. H. Maurer handles Quebec and the Maritime Provinces as sales manager. This month the head offices are being moved into the premises lately occupied by The Jenckes Machine Co., 81 York street, Toronto, where full apparatus is being installed to show the remarkable brilliance of the new gas.



Sectional view of Siche Gas Machine.

A number of the leading Ontario summer hotels and clubs are using this gas, the latest to instal a plant being the Toronto Golf Association, East Toronto.

Chemically Siche gas is known as bicarburet of hydrogen, and is said to be absolutely pure and harmless.

AGRICULTURAL IMPLEMENTS FOR INDIA.

According to a New York exchange the Indian Government is placing orders with American firms for agricultural implements for use on the experimental farms at Magpur. Here is an opportunity for Canadian enterprise. Although still in a comparatively primitive state,

A COMPLETE STOCK. PROMPT SHIPMENTS.

The Fairbanks Company

MONTREAL WINNIPEG VANCOUVER

India is one of the great corn producing countries of the world. The Government is beginning to use modern agricultural machinery on the experimental farms. The "Yes" stimulated by example will not be long in following. Much depends upon being first in the field. The Hindoo is notoriously conservative, and having once adopted a particular make of implement will not lightly be induced to use any other. Our manufacturers of agricultural machinery have been very successful in capturing the Australian trade. Let them not fail to secure their share in the market of India's teeming millions, now awakening from the lethargy of ages.

MACHINERY NOTES.

THE Canadian American Mining Co. are about to erect a sawmill on Gribbel Island, 400 miles up the coast from Vancouver. The primary purpose of the mill is to cut mining timbers and other materials for the company's operations there. W. Cox, of Fairhaven, Wash., president of the company, was in Vancouver, B.C., last week, arranging to buy machinery and other mechanical equipment.

The work of placing the machinery in the new works of The Manitoba Iron Works, Winnipeg, has been commenced.

The Kay Dynamo and Motor Co., Queen street, Toronto, are installing an arc and incandescent lighting plant at Creemore, Ont.

A 30 h.-p. slide valve engine has been purchased from H. W. Petrie, Toronto, for The Strathroy Canning Co, of Strathroy, Ont.

Active development will commence at the Gold Eagle, Eagle Lake, as soon as the machinery, which is expected shortly, is installed.

An 8 h.-p. gasoline engine, to furnish power for an areastra, was shipped to A. T. Lynch, of Rat Portage, Ont., by H. W. Petrie, Toronto.

The Victoria Lumber Co. have recently put in four new boilers at their mills, Chemainus, B.C. The boilers were built by The Victoria Machinery Depot.

The Northern Iron Works, of Winnipeg, which recently suffered from a disastrous fire, have risen phoenix-like from the ashes, and are filling orders placed before the fire.

Bradley, Levey & Weston, of Toronto, shipped a carload of machinery on Wednesday to Greer & Ford, of Bracebridge, Ont.; also a punch to The Waterloo Manufacturing Co.

A flouring mill is being erected in Medicine Hat, N.W.T., by The Medicine Hat Milling Co. The machinery has arrived and the company is looking forward to coal and Crow's Nest Pass trade.

The Gutta Percha and Rubber Co., of Parkdale, have installed in their plant an 11 in. x 5 ft. Barnes lathe, a Buffalo geared portable forge, and machine-shop accessories. This machine was furnished by H. W. Petrie, Toronto.

Some up-to-date tools in the shape of a 24x24x6½ ft. iron planer and a 26-in. pedestal band saw were installed in the plant of The Toronto Laundry Machine Co., 1100 Queen street west, by W. H. Petrie, Toronto.

The Wrought Iron Wheel Works, Orillia, Ont., will be manufacturing in their new building in a few days. T. H. Knox, the secretary-treasurer of the company, expects to have between 40 and 50 hands at work in the near future.

The Canadian General Electric Co., of Toronto, have issued a handsome bulletin describing the Stanley Wattmeter. A feature of the instrument is an ingenious method of supporting the moving parts whereby it is claimed that friction is almost entirely eliminated.

The employes of The Waterous Engine Works Co., Brantford, Ont., will run their annual excursion on June 13. The vote of the factory on Saturday was almost unanimous for the favorite points, Buffalo and Niagara Falls. The proceeds will be turned over to the employes' sick benefit fund.

The Canada Foundry Co., Limited, of Toronto, are sending out a card to the trade announcing that they will continue the manufacture of pumping machinery at the works of The Northey Co., Limited, lately acquired by them. J. P. Northey will continue as manager of this department.

W. T. Waring, Government Inspector of Marine Machinery and Boilers for the Maritime Provinces, died on Monday, June 1, at St. John, N.B. He was known intimately to the shipping fraternity of Canada and the United States. Deceased was prominent in the Independent Order of Good Templars as a national officer.

E. R. Simpson, M.E., who has been engineer for The Chapman Double Ball Bearing Co., Boston, for some time, has accepted the position of mechanical superintendent of The Chapman Double Ball Bearing Co., of Canada, Limited, Toronto. Mr. Simpson has been so successful in his work in connection with the Boston concern and it is now in such a strong working condition that the Canadian Co. are congratulating themselves on securing his services.

James and W. Bruce Large, of Camilla, Ont., are the patentees of a very simple contrivance in the way of a tongue carrier to be used with heavy farm machinery, particularly the self-binder. Its object is to lighten somewhat the burden of the tongue on the horses' necks and thereby save the horses in the heat and rush of the harvest. It is a casting fastened to the lower part of the tongue and attached by a supporting spring to a wide wheel which runs on the ground. Wilson & Son, founders, Dundalk, Ont., have a contract to make castings for 100 sets of this useful article.

CHAT

Chas. Julien's foundry at Pont Rouge, Que., was destroyed by fire last week.

L. Cohen & Co. have opened a bicycle shop at Caledonia Ridge, N.B.

H. W. Turner has opened a new general store, one of the best in the place, at O'Leary, P.E.I.

Black Bros., Halifax, N.S., have the contract for supplying the hardware to Halifax city for the following year.

Work has commenced on the foundation of the new block for The Brandon Hardware Company, on the corner of Seventh street and Rosser, Brandon, Man.

It is rumored that the Government may appoint an inspector of binder twine, and that Joseph Haycock, ex Patron leader in the Ontario Legislature, may get the position.

Winnipeg tinsmiths have formed a union with the following officers: President—James Robb; vice-president—Jas. Skelly; recording-secretary—D. R. McRae; financial secretary—H. W. Marshall; treasurer—Joe Robbins; conductor—J. A. Glasgow; warden—W. Wells; delegates to Trades' Council—H. W. Marshall, C. Wright and J. Glasgow.

E. M. Trowern, secretary of the Retail Merchants' Association of Canada, was in Ottawa recently. He expects to be back soon for the purpose of holding a meeting to arrange the formation of branches of the association among the different business sections in the city. The grocers' association of this city are assisting him in the work.

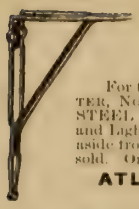
KNEW A FEW THINGS.

"What's the news?" asked "Hardware and Metal" of a Toronto traveller this week.

"Haven't you heard of the drop in cutlery?"

"No."

"Well, it has been reported from Orillia, Ont., that a big smash occurred there. It is said, too, though, that business is brisk in Western Ontario and that a traveller doing that territory has done so well that he is now able to build a home for himself on Albany avenue, Toronto. I suppose you know, too, that a hardware dealer on Queen street west has had such a busy season selling "Peninsula" ranges, that he can afford to spend a good deal of his summer near Mimico. They tell me that the 'bears' control the stock market just now, but I met a 'bull' to-day who has the 'keys' to the hardware situation at Weston. I know a good deal more than this, but I don't want to tell you all at once. Good day."



Will Hold Up a Shelf!

That's what a shelf bracket is for

For this purpose there can be NOTHING BETTER, NOTHING CHEAPER than the BRADLEY STEEL BRACKET It is well Japanned, Strong and Light The saving in freight is a good profit, aside from the lower price at which the goods are sold. Order direct or through your jobber.

INDUSTRIAL GOSSIP

MINING developments in British Columbia are extremely satisfactory. In the Kootenay the shipments of ore are now running about 8,000 tons per week, and it is believed they will reach 10,000 tons per week in a short time. In the Boundary district six furnaces are in blast at the three smelters and are handling about 12,000 tons per week, though the coke supply is far from satisfactory.

* * *

The Blind River Transportation Co., Limited, Blind River, Ont., have been incorporated with $60,000 capital to build wharves, decks, warehouses, etc., and to operate boats, tugs, scows, etc., for transportation purposes in New Ontario. The company's directors are Geo W. Cook, Morrisburg, Ont., J. R. Stover, Blind River, and Peter Wallace, Midland, Ont.

* * *

The iron, tin and steel trades of the United States are, in view of the present uncertain condition of the labor market, to be congratulated on the happy result of the conference between representatives of the Manufacturers' Association and the workers' union, whereby a satisfactory wage scale is fixed for the coming year, small concessions being made by the employers.

* * *

The International Coal and Coke Co. have been incorporated in Washington State, U.S, with $3,000,000 capital to acquire coal properties in Alberta, N.W.T., in order to insure a good coal and coke supply for The Granby Consolidated Mining, Smelting and Power Co. in the Boundary district. Coal lands have already been secured and will be developed. One hundred coke ovens will be installed as soon as possible.

* * *

J. M. Hastings and M. W. Tenfelt, representing a Pittsburg, Pa., syndicate, have acquired E D. Davison & Sons' timber areas in Nova Scotia. The property comprises 300,000 acres, well wooded with pine and spruce, with five saw mills. The property has been under option for several months. The price is $1,250,000. The output will be largely increased, and pulp and paper mills will be established on Port Medway and La Have Rivers, which empty into tide water.

* * *

The National Casket Co., Limited, Toronto, have been incorporated to take over the Eckardt Casket Co., Limited, with the power to manufacture and deal in caskets, hearses, carriages, furniture, undertakers' supplies, and to carry on a lumber business, including the generation of heat and power, and dispose of any excess of their requirements. The directors are A. J. H. Eckardt, Rose A. M. Eckardt, W. B. Short, Frank Booth and W. R. P. Parker, Toronto; the capital, $1,000,000.

* * *

The Municipal and General Securities Co., Limited, Toronto, have been incorporated with a share capital of $500,000. The provisional directors are W. R. Johnston, G. T. Clarkson, Herbert Langlois, R. R. Bongard and R. H. Parmenter, Toronto. Permission has been given to the company to deal in Canadian debentures or other securities and to conduct a general brokerage business, but it shall not enjoy the powers of a loan corporation.

NOTES.

Orangeville has voted a free site for The Superior Portland Cement Co.

It is believed that the output of gold from the Yukon will this year be less than $3,000,000.

The C.P.R. has received the first of its order for 52 engines from Neilson, Reed & Co., Glasgow.

The Green Mountain mine, Rossland, B.C., has started installing new boilers and winding plant.

Geo. Murray, Seaforth, Ont., has established a plant at Brandon, Man., for making brick of cement and sand.

Engineer Rust, Toronto, has suggested that a gasoline launch be secured for life-saving purposes on Toronto Bay.

The Shoal Lake, Man., Star states that a flour mill will, in all probability, be erected at Shoal Lake this summer.

The Brantford, Ont., Cordage Co., Limited, have been empowered to increase their capital from $100,000 to $250,000.

The Eclipse Furniture Co. of Ottawa, Limited, have been authorized to change their style to The Eclipse Mfg. Co., Limited.

The Merchants Dyeing and Finishing Co. of Toronto, Limited, have been authorized to increase their capital from $180,000 to $280,000.

Owain Martin, superintendent of Nordheimer's piano factories, Toronto, has resigned to start manufacturing on his own account.

H. A. Lozier, the sewing machine and bicycle manufacturer, died in New York last week. He was reputed to be worth over $10,000,000.

D. G. Forbes, general manager of the Silver Cup and Nettie L. mines, near Ferguson, B.C., has announced that a concentrator will be erected and a tram line will be extended three miles to the mill buildings.

B. W. Folger, Kingston, Ont., has let a contract for a 20-mile extension of the Bay of Quinte railway from Tweed, Ont., in the direction of North Bay.

The Elmira Furniture Co., Elmira, Ont., have been incorporated with $40,000 capital. The provisional directors are Thomas Dillon, Emil Quirmback and Joseph Walser.

The Sultana Gold Mine Co., Rat Portage, Ont., have been incorporated; capital, $1,000,000; provisional directors, J. F. Caldwell, D. C. Cameron, W. H. Wallbridge.

Hon. E. J. Davis, Toronto, has converted his tannery business into a joint stock company under the style of A. Davis & Son, Limited, King, Ont., with a capital of $250,000.

The Toronto Laundry Machine Co., Toronto, have been organized as a limited liability company under Ontario charter, the style now being The Toronto Laundry Machine Co., Limited.

The directors of the Toronto Street Railway Co., Limited, have decided to add from 6,000 to 10,000 horse-power to their plant. Plans for the extension have been submitted by New York experts.

The last day for the receipt of tenders by the Dominion Government for a fast Atlantic steamship service was Monday. It is understood that the only companies tendering were the C.P.R. and the Allan Line.

Wm. Blakemore, M.E., representing the British Columbia Coal Co., Limited, Grand Forks, B.C., is superintending the construction of a pack train to the company's mines and the installation of a drilling plant.

John F. Stairs, of the Nova Scotia Steel and Coal Co., New Glasgow, N.S., has announced that while that company will establish blast furnaces and steel works at North Sydney, N.S., they will continue their present works at New Glasgow.

The Gull River Lumber Co., Limited, Coboconk, Ont., have been incorporated with $40,000 capital to carry on a lumber business. The directors are Edward Noice, G. W. Stevens, R. J. McLaughlin and James A. Peel, Lindsay, Ont.

A Boston despatch says that The Pope Manufacturing Co., who have succeeded The American Bicycle Co., are turning out 300,000 bicycles a year and have advanced prices 20 per cent., the retail price of wheels selling last year for $40 now being $50.

The Colonial Oil Company, London, Ont., have been incorporated to prospect for oil and gas, to acquire and develope properties; capital $100,000; provisional directors, J. H. Stewart, R. J. Copeland, D. S Robb, G. A. McGillivray, W. E. Raney.

The St. Catharines Gas Co., Limited, have been incorporated to acquire the St. Catharines and Welland Canal Gas Light Co., and to operate the same; capital, $100,000; provisional directors, T. R. Merritt, E. Goodman, C. T. Benson, J. H. Ingersoll, W. H. Merritt, H. J. Taylor, St. Catharines.

Cable Address { Adscript, London. / Adscript, Canada.

THE BRITISH TARIFF QUESTION AND CANADA.

IT is evident that the speech of the Right Hon. Joseph Chamberlain, in the British House of Commons last week, in reply to a question put to the Government in regard to his now famous Birmingham address, that the question of customs tariffs in relation to trade and commerce is again to be fought out in Great Britain in the not distant future. Mr. Chamberlain's address in the House made more emphatic that which he said at Birmingham. He made it clear that he was in favor of foods being taxed ; that a fiscal arrangement should be made whereby Irish industries and agriculture would be revived ; that home industries should be protected against the highly protected industries and also the trusts of the United States ; and that the part of Canada should be taken in her tariff quarrel with Germany.

Not since Gladstone's famous Home Rule Bill have political conditions in Great Britain been so disturbed or so much interest taken in the trade question.

As to the relative merits of free trade and protection the average Britishier is still a devoted believer in the former, but he has evidently awakened to the fact that in commerce as well as physical welfare it is not wise to be inactive while the enemy is aggressive. When the conditions are normal free trade is an ideal policy, just as peace is an ideal condition. Mr. Chamberlain emphatically declared that he is a free trader, but he was just as emphatical in his declaration that free trade had ceased to be common sense when every foreign nation had raised its tariff to keep out British products.

The leaders of the battle for free trade that was fought and won 60 years ago were business men. And history now promises to repeat itself in the battle for fair tariff, which now seems inevitable. The voice of the theorist will be raised in protest against any departure from the "let alone" policy which now prevails. But the voice of the business man is becoming more and more potent against the continuance of the present policy which allows foreign competitors to meet him on an equal footing at home, while in the market he is met by hostile tariffs, in some instances practically prohibitive in their character. Among the younger generation of business men in Great Britain this spirit of dissatisfaction is particularly marked. We gather this from not only the columns of many British newspapers, but from opinions Canadians have formed during recent visits to Great Britain, and from what Englishmen who from time to time are visiting Canada on business have said.

Great Britain has no doubt greatly increased her commercial prestige during the last fifty years. And to change her fiscal policy is a matter of very great moment, and, consequently, demanding careful consideration. But tariffs and truth are not synonymous terms. The one is changeable, the other is not, and, like a garment, must be conformable to the prevailing conditions.

The turn affairs are taking in Great Britain is of the utmost importance to Canada ; and to no part of the British Empire are they more so. We firmly believe that our political future in relation to the British Empire depends to no small extent upon our commercial relationship with the Mother Country. And nowhere, possibly outside Great Britain itself, will the trend of affairs there in regard to fiscal trade matters be more closely watched than in this country.

SCHWAB'S GIFT TO HOMESTEAD.

THE dedication of the free industrial school at Homestead, Pa., marks an epoch in the iron industry of the United States. The donor of the school, Charles M. Schwab, had to win his knowledge without institutional aids, but his keen mind taught him that if labor was to be respected and uplifted to its proper place in the life of the industrial centres he was interested in, provision must be made to enable the youth of the cities to acquire a proper, thorough training in industrial pursuits.

Millionaires have found many outlets for their accumulations of wealth, but it is seldom that money is put to better purpose than has been done in this instance, whereby all Homestead children who desire to, may, while completing their high school course, learn a useful trade, and will be prepared to follow up their learning in the most practical manner by a further study of chemistry, electricity, mechanics or engineering.

In the Homestead school are blacksmith, machine and carpenter shops ; chemical and electrical laboratories ; lecture rooms for teaching drawing, wood carving and modelling. Girls are taught such useful pursuits as plain baking and fancy cooking, sewing, drawing, etc.

It has been stated that Mr. Schwab intends to follow up this practical evidence of his philanthropic and democratic spirit by providing a similar institution for McKeesport, Pa., but he has announced that this step will not be taken in the immediate future.

THE AMES FAILURE AND TRADE SITUATION.

WHEN the failure of Ames & Co., the Toronto stock brokers, and private bankers, was announced fear was felt by some as to the possible effect it might have upon the trade and commerce of the country.

The basis of all business is confidence. If this be skaken, business must suffer, but it cannot be too strongly emphasized that the failure of Ames & Co. is not due to any depression in the ordinary trade and commerce of the country, or, for that matter, of the continent. It is simply due to the collapse of inflated values on the stock market in the United States and Canada.

While the speculative fever was at its height the price of stocks was forced away beyond their intrinsic value. When this point was reached and money became tighter and banks more cautious in advancing loans on stocks, the inevitable reaction took place. During the last two or three months this reaction has developed into a stampede.

It was this that carried down the firm of Ames & Co. Their liabilities were over $10,000,000 the end of May. When they suspended payment on June 2nd it was $7,500,000. These liabilities were caused by the shrinkage in the value of securities owned by the firm itself and losses arising out of the fact that many clients were unable to protect their stock.

Since the firm's statement has been published the situation is much clearer from a commercial as well as from a stock market standpoint. No more forced sales of securities held by the firm are likely to take place; in fact, there appears to be a general understanding among the creditors of the firm that there shall not be. As a result, there is a general feeling that the worst has happened. The condition of the stock market by the steadier tone it has assumed during the last few days, and the slight recovery in values that has taken place, is an encouraging evidence of this.

If in the stock market there is now no cause for alarm surely there cannot be in the general trade situation. The prospects for the agricultural interests of the Dominion were never better than they are to-day. The recent beneficent rains seem to have put the assurance of good grain crops in Ontario and the Great West beyond all question. Our manufacturing industries are as actively engaged as ever and the demand for labor as well as for merchandise exceeds the supply. The traffic on the railways is still congested on account of the excessive quantity of merchandise which they are called upon to carry. The statistics relating to the business of the banks is another most assuring feature of the healthy condition of the trade and commerce of the country.

There are some who see in the decline in pig iron the return of dull times. Periods of commercial dulness we shall certainly see again. They come just as regular as good times. But even forgetting for the moment the many assuring features which now characterize the commercial situation, it must be remembered that the price of pig iron, like public securities, has been relatively too high when measured by the appreciation which has taken place in the value of the more finished products. In other words, the value of the raw material and the finished product has become out of proportion, and in spite of the decline it is still out of proportion.

What is a greater matter for concern just now than anything else in the commercial world is the labor strikes. They are certainly to be deplored, for the buying capacity in several large trade centres both in Canada and the United States must have been greatly curtailed of late on account of the open warfare between employers and employes.

The fact that Ames & Co. possessed a high reputation for integrity may have had something to do with the prevention of a panic on the stock market; but it is significant, nevertheless, that in spite of the failure, with its heavy liabilities, the Canadian stock market should have been stronger since the firm suspended payment than it was before. This should be reassuring to business men as well as to operators on the stock exchanges.

HOLD-UPS OF BUSINESS MEN.

MANY of the evils which exist in trade to-day could be removed by business men of their own volition. One of these is in regard to what are practically "hold-ups" of both wholesale and retail firms by promoters of advertising fakes and other species of schemes for squeezing money from merchants.

No business man, whether retail or wholesale, should allow himself to be used by such schemes, for it only redounds to his own injury.

The retailer knows when he is approached for money in support of such schemes by his own customers that it is merely a scheme whereby funds may be extorted from him. In fact, nearly every retailer has been at times threatened that if he did not comply with the request of those promoters that they would have to turn their regular trade over to someone else.

Country merchants should not allow themselves to be used for exacting contributions, whether direct or in the shape of advertisements or funds, from wholesale firms.

The principle is bad and is scarcely less immoral than the method employed by the old time highwayman.

All it requires to withstand these hold-ups is courage, and if this is practised for a short time by both wholesalers and retailers, promoters of various descriptions of hold-ups will learn that their source of supply is cut off, and they will discontinue their methods and the evil will be reduced to a minimum.

TO ONTARIO SUBSCRIBERS.

HARDWARE AND METAL would consider it a favor if subscribers on the principal railway lines as far east as Montreal and as far west as Windsor who do not receive their paper on Saturday morning would at once notify us, stating the time of its receipt at their post office.

Some complaints have been received in regard to this matter in the past, and, as care is taken to have the paper delivered to the post office in good time for Saturday morning delivery throughout Ontario, we would like to hear of all cases of delay, that the matter may be attended to and a satisfactory delivery ensured.

ENCOURAGING POOR BUILDINGS.

MUCH interest in Montreal's building assessment system is being aroused by the announced intention of Henry Morgan & Co., owners of one of the handsomest business blocks in that city, to tear down their building and erect on its foundations a plain, red brick structure, which would perhaps be an eyesore to the city's fashionable retail street, but would save the firm some $4,000 annually in taxes. If this is done, what is probably the handsomest store in Canada will be destroyed.

For a long time there has been a standing dispute between Morgan & Co. and the municipal authorities of Montreal about their assessment taxes, and the firm have pretty clearly demonstrated that the city's assessment system is most unjust, encouraging the erection of plain, cheap structures, and levying an exorbitant rate of taxation on any building with pretentions to costly material and architectural beauty. The firm's position is well set forth by Mr. James Morgan, who believes in an arbitrary value being placed on land, of $1 or $2 per foot on the outskirts and $20 or so per foot in the business centre, the buildings then to be assessed according to their cubic area. He thinks the maximum assessment on buildings should be 25c. per cubic foot, and the minimum 5c. Buildings should be valued in proportion to the value of the land.

At present Morgan & Co. pay the same rate of taxation on that portion of their building which extends back Aylmer street, away from the front street, as they do on that fronting on St. Catherine street, although the value of the land on St. Catherine street is many times the value of the other. Thus their assessment is enormous. Across Aylmer street, on St. Catherine street, is an unpretentious building, erected on just as valuable land as that on which the Morgan store stands, but the rate is very much lower.

It is such treatment as this of those who are enterprising enough to put up buildings that would beautify and enhance the value of their locality, that deters many in Montreal from attempting anything in the way of architectural improvement.

As regards the proposed new building, it will cover more land than the present structure. On the three sides of the building facing streets there is some 6,000 feet of space not used by them, but being used as part of the public walk, and as they pay taxes on this land the same as though the building covered it, they intend to extend the new structure so as to enclose this. Only the stone pillars of the old building will remain, and the new exterior will be hung on these. Supported by steel bridge work, the shell will be hung on the cantilever principle, the weight being borne from above. As the outside will be chiefly glass, with a thin veneer of brick, the weight will not be great.

Taxation is a problem which appears to be still far from a satisfactory solution.

REASONS FOR DELAY.

THE congestion of freight consequent upon the recent strike of the longshoremen and teamsters in Montreal is to some extent still prevalent, though it is now being rapidly overcome. Customers were naturally impatient for a time for delivery of goods, and though many letters of explanation were sent out by the wholesale houses to the trade, there was some dissatisfaction, due to misunderstanding.

A phase of the situation that is generally overlooked is that while the railway and transportation companies were so packed with goods the jobbers had to cart their own wares from the docks or stations, with the result that for some time certain goods were buried in their storerooms under great piles of boxes and bales.

It was impossible to get at these goods until those above them had been removed, and as orders for all the goods were waiting to be filled, the most expeditious method was to ship the goods nearest to hand. Thus the goods last put in the sheds and storerooms were the first to be delivered, though orders for them may not have been received until some time after the other goods. In this way there were some long delays, and added to this that there was necessarily a good deal of reshipping, it is small wonder that the patience of the buyers gave out at times. However, things are rapidly adjusting themselves, and shipping operations will soon resume their normal condition.

A PECULIAR PROCEEDING.

A FOREIGN hardware manufacturing concern has just lost one of the best selling agents it could possibly have in this country through too much anxiety to sell goods and too little regard for its appointed representative. The latter is now the representative of several English, American and foreign manufacturers who stand well to the front in their several lines of business; he is one of the best-known manufacturers' agents in Canada, and has worked up a good business for the firms he represents.

Until the other day he was doing business as the sole Canadian agent for the hardware manufacturing firm referred to above. That firm's representative in the New England States was a pushing man who thought he could cultivate the Canadian ground. As he explained to his firm, "he would wake us up a bit" and make things easier for their Canadian representative. The firm acquiesced, and the pushing man came up. The firm, however, made the serious mistake of telling their Canadian agent nothing about it, leaving that for the pushing man to do. The latter, however, did nothing of the kind; there is even evidence that he disclaimed all knowledge of any other representative in this country, and though it does not appear that he secured a great deal of business, yet he certainly did succeed in making things embarrassing for the Canadian agent. This gentleman sent his resignation to the firm couched in language that President Roosevelt would likely term very "strenuous," and the reply he received was to the effect that it fully expected its New England agent to work together with him, to aid him, in act, in extending its business in Canada.

The firm is now open for another "sole" Canadian agent, and if it gets one it is likely that it will treat him with more consideration than the one it has just lost.

It is as much to the advantage of the agent as to the firm he represents that business in his territory should progress as satisfactorily as possible, and instead of allowing another agent, and that one a total stranger in the country, to invade his ground or interfere in any way, whether for good or evil, with his work, it should be taken for granted that he is doing the best for his principals that it is possible to do. If they have reason to believe that he is not doing this, it is an easy matter to withdraw the agency from him and place it in more capable hands.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, June 5, 1903.

HARDWARE.

THERE is a good trade moving in general hardware, and makers having now caught up with their orders there are fewer complaints from jobbers and dealers about delayed deliveries. Prices, as a rule, show no radical change, the only important development in this connection being an advance in the price of building paper of 5 to 10c. Lawn mowers are moving out well and there is a good business doing in barbed and galvanized wire. Cut and wire nails are also in good request and values are without change. Horsenails are quiet as last noted, and the same can be said of horseshoes, rivets, bolts, etc. Cordage, since the late advance, has been well inquired for.

LAWN MOWERS.—In fair request and steady. We quote: 10 in. wheel x 12 in cutter., $7.50; by 14 in. cutter, $8.00; by 16 in. ditto, $8.50; by 18-in. ditto, $9.00; by 20-in. ditto, $10.00. Star, 9 inch wheel by 12 inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12 inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—There is a good business doing. We quote: $2.80 per 100 lb. f.o.b. Montreal, and $2.55 f.o.b. Cleveland. Carlots of 15 tons are quoted f.o.b. Cleveland at $2.45.

GALVANIZED WIRE.—Business continues satisfactory. We quote as follows: No. 5, $3.70; No. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—There is a fair trade doing. We quote as follows: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE STEEL WIRE.—The basis continues the same at 25 per cent. with extras: 1 and 2 lb. banks, 25c. per 100 lb.; ½ lb. banks, 37½c. and ¼ lb. banks, 50c.

BRASS AND COPPER WIRE.—Without new feature, discounts being 60 per cent.

PRESSED SPIKES.—Business is maintained. The discount remains at 20 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

FENCE STAPLES.—Quiet but steady. Our quotations are as follows: $3.00 per 100 lb. keg for galvanized and $2.80 for bright, with 25c. extra for 25 and 50 lb. packages.

CUT NAILS.—There is a good business in these, and the base price remains as last quoted at $2.45.

WIRE NAILS.—A good jobbing inquiry is experienced. We quote carlots at $2.40 and small lots at $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

HORSE NAILS.—Quiet and unchanged as last noted. We quote: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, prices quoted on application. "C" brand, 40, 10 and 7½ per cent. off; "Monarch," 65 and 10 per cent. and "Peerless," 50 per cent.

HORSESHOES.—There has been a fair volume of business in these. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; X L steel shoes, new, light pattern, sizes 1 to 5, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—Quiet with only a small sorting demand. Quotations are as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off, and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—Trade fair with no change to mention. Our quotations are as follows: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent.; machine bolts, 50, and 5 and 10 per cent.; coach screws, 66 2-3 and 10 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 and 10 per cent.; bolt ends, 50 and 5 and 10 per cent.; plough bolts, 50 and 5 and 10 per cent.; tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3¾c. per lb. off list; hexagon nuts, 4c. per lb. off list.

SCREWS.—Meet a fair inquiry. We quote as follows: Round head bright, 82½ per cent.; flat head bright, 87½ per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

CORDAGE.—Business at the advance has been of considerable volume. We now quote: Pure manila, 14c.; British pure manila, 12c.; sisal, 11½c.; double lath yarn, 11½c.

BUILDING PAPER.—Prices are firmer all round, having advanced 5 to 10c. on different sorts, while business is active. We quote: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 95c. per roll; 3-ply, $1.20 per roll; carpet felt, $2.50 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O K and I X L, 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

FIREBRICKS.—Steady as last quoted: $16 to $22 per 1,000 for English and $17 to $22 for Scotch, as to brand.

CEMENT.—An active movement is in progress and prices are firmly held, as follows: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl. ex-store, and American, $2.20 to $2.40 ex-cars.

SHOT.—A fair trade is noted. Prices are as follows: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7.00 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount, 15 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

METALS

The feeling this week has been rather steadier in tone, but importers and importers' agents are surprised that the firmer tendency which they expected in England, has not yet developed, for primary advices, as a rule, show no change. Across the line the feeling is somewhat firmer and manufacturers there advise customers that business is better with them than it was during the early portion of May, while all kinds of finished material reflect a steady tone.

BAR IRON.—There has been no change in prices and a fair business has been transacted. We quote: Merchants' bar, $2; horseshoe iron, $2.25 and forged iron, $2.30.

BLACK SHEETS.—There is a fair business moving at previous prices. Prices are now: 28 gauge, $2.45; 26 gauge, $2.40; 22 to 24 gauge, $2.35; 18 to 20 gauge, $2.30 and 8 to 10 gauge, $2.40.

GALVANIZED IRON.—In fair request, with prices unchanged as last quoted: 28, Queen's Head, $4.40; Apollo, 10¾-oz., $4.30; Fleur-de-Lis, $4.15; Comet, $4; Bell brand, $4.05. In less than case lots, 25c. extra.

LEAD PIPE.—Business is fairly active, with prices steady. We quote 8c. for composition waste and 7c. for ordinary, with 30 per cent. discount.

IRON PIPE.—Steady, as quoted last week. Prices follow: Standard pipe, per 100 ft., in lengths under 19 ft.: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85, ¾, $3.65; 1-in., $5.20; 1¼, $7.35; 1½, $8.95; 2-in., $12.55. Galvanized, ½, $3.20; ⅜, $3.15; ½, $3.85; ¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2-in., 416.85. Extra heavy pipe, plain ends, are quoted per 100 ft. as follows: Black, ½, $4.20; ¾, $5.25; 1-in., $7.55; 1¼, 410.55; 1½, $12.75; 2-in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1-in., $9.55; 1¼, $13.25; 1½, $16; 2-in., $21.90. For threads and couplings on extra heavy

TINPLATE.--Business has been good at prices last quoted, as follows: Charcoal, $1.25 and cokes, $3.55 to $4, as to quantity.

SOIL PIPE.—Without change this week. Quotations are as follows: Light soil pipe, 3 to 6 in., 50 per cent.; medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8-inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.; extra heavy fittings, 8-inch, 45 per cent.

PIG IRON.—There is not much activity in this line. We quote: Parron, No. 1, $21; do, No. 3, $19.75; Middlesboro', $17.75; Ayersome, No. 1, $19.75; do, No. 3, $19.50.

INGOT COPPER.—Continues steady at $15.50 to $15.75 per 100 lb. Outside markets have been somewhat easier, but the fact has not affected values here.

INGOT TIN.—There has been no change in tin, which remains at $33 to $33.25 per 100 lb. Primary reports continue easy in tone, however, both as regards prompt and forward shipments.

PIG LEAD.—Remains as last noted at $3.50 to $3.75.

STEEL.—Fairly active.— We quote: Mild, $2.05; sleighshoe, $2.10 to $2.20; tire, $2.15 to $2.25; spring, $2.85 to $3; reeled machinery, $2.75 to $3; toecalk, $2.60 to $2.75; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.50.

TOOL STEEL.—Without change. We quote: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATE.—These are going forward well. Our quotations are as follows: 52s, $2.60 to 92.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

TERNE PLATE.—Unchanged as last reported at $7.25, with only a moderate demand.

COIL CHAIN.—Remains quiet, as follows: No. 6, 10c.; No. 5, 9c.; No. 4, 8½c.; No. 3, 7c.; ¼-in., 6½c.; 5-16-in., $4.90; ⅜-in., $4.20; 7-16-in., $4; ½-in., $3.90; 9-16-in., $3.75; ⅝-in., $3.60; ¾-in., $3.50; ⅞-in., $3.45, and 1-in., $3.40, with 10c. allowance on carlots.

SOLDER.—As last quoted at 20c. for bar and 19c. for wire.

ZINC SPELTER.—Remains steady at $6.25 to $6.50. Outside advices have been rather firmer.

SHEET ZINC. Without change at $6.75 to $7, as to gauge.

SCRAP METALS.

Dull and unchanged. Our quotations are as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $17 to $17.50; No. 2, $7.50 per ton; machinery scrap, $17.50 to $18; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6¼ to 6¾c. per lb.

HIDES.

Dull, but steady. We quote: No. 1 hides, 8c.; No. 2, 7c.; No. 3, 6c. Calfskins, 9 to 11c.; sheepskins, 75c.; lambskins, 15c.

ONTARIO MARKETS.

Toronto, June 5, 1903.

HARDWARE.

THERE is still a good movement, for repeat orders are generous and while spring orders are well filled, numerous. The scarcity noted in some lines is still as pronounced as ever, screws, nuts and bolts being even harder to get. Building paper is 5c., and tarred felt, 10c. higher, owing to an advance of 50c. per bbl. in refined tar. Large sizes of iron pipe have been reduced $1 to $2 in price. Lawn standard hose has advanced about 25 per cent., the quotation now being 5½c. per ft. for ½-in., and 6½c for ¾ in. An advance in rope and sash cord is predicted by some houses. In other lines there is no change, a firm feeling being manifest.

BARB WIRE.—Business is about over. The base price is as follows: $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

GALVANIZED WIRE.—A fair business is still doing. Our quotations are as follows: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots and at $2.15 in carlots.

SMOOTH STEEL WIRE.—The demand is reduced. The base price is $2.50 per 100 lb. Oiling 10c.; coppering 60c.; and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

COIL SPRING WIRE.—Demand is now light. We quote: No. 9, $2.75; No. 11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less, with freight up to 20c. allowed.

WIRE NAILS.—There is still a shortage; prices are decidedly firm. We quote: Carlots, $2.40 and small lots, $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—An excellent demand keeps up at $2.50 per keg f.o.b. Toronto.

HORSE NAILS.—Demand seems somewhat larger. The discount on "Monarch" has been reduced 10 per cent. Our quotations are: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 60 per cent., and "Countersunk head," 60 per cent.; on "Peerless," 45 and 7½ per cent.

HORSESHOES.—A good business is doing at the higher figures now quoted. We quote, f.o.b. Toronto: Iron shoes, No. 2 and larger, $3.80; No. 1 and smaller $4.05. Steel, new light shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20. Snow shoes, No. 2 and larger, $4.05, No. 1 and lighter, $4.30. If shipped from factory, 15c. less.

SCREWS.—There is a good general demand, with a scarcity in some sizes, notably 1¼ x 10 in. We quote as follows: Flat head bright, 87½ per cent. discount; round head bright, 82½ per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

RIVETS AND BURRS.—In fair demand. We quote: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

BOLTS AND NUTS.—The scarcity is general, jobbers' stocks as well as manufacturers' being quite small. We now quote: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron, ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

BINDER TWINE.—A good business continues. Prices are steady. We quote: 650 ft., 13c.; 600 ft., 12c.; 550 ft., 11¼c.; 500 ft., 10½c.

CORDAGE.—Last week's advance is maintained, and a further rise is looked for by some. We quote as follows: Pure manila, 14½c.; British pure manila, 12c.; sisal, 11½c.; double lathyarn, 11½c.; single lathyarn, 11c.; double shingleyarn, 11½c.; single shingleyarn, 11c.

LAWN MOWERS.—The scarcity is as manifest as ever. Prices are steady. We quote: Woodyatt, 12-in., $7.50; 14-in., $8; 16-in., $8.50; 18-in., $9; 20-in., $10; Star, 12-in., $5.50; 14-in., $5.75; 16-in., $6; Daisy, 12-in., $4.90; 14-in., $5.10; 16-in., $5.30; Ontario, 12-in., $14.25; 14-in., $15.80; 16-in., $16.80; 18-in., $18.90; 20-in., $20.50; Philadelphia, 12-in., $6.50; 14-in., $7; 16-in., $7.50. Discount, 40 and 10 to 50 per cent.

SOIL PIPE AND FITTINGS.—A good demand continues. Prices are steady, with the discounts quoted as follows: Light soil pipe, 45 and 5 per cent.; light soil pipe fittings, 50 and 5 per cent.; medium and extra heavy pipe and fittings, 55 and 5 per cent.; 7 and 8-in pipe, 40 and 5 per cent.

BRASS GOODS.—The demand for both plumbing and steam specialties continues brisk. Discounts are unchanged.

BUILDING PAPER.—As anticipated, in this paper there has been an advance of 10c. in tarred felt, and 5c. in building paper, which is caused by exceptional demand and advance in refined tar. Quotations are: Tarred felt, $1.75 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100-lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre 50c. per roll; tarred fibre, 60c. per roll, O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN DOORS.—Stocks are light; demand good. We quote as follows: Screen doors, common, 2 or 3 panel, walnut stained, 4-in. style, $6.80; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

PLUMBING FIXTURES.—The demand keeps active, and earthenware stocks, particularly of closets, are comparatively light. Prices are steady.

RUBBER HOSE.—An advance of 20 to 25 per cent. is noted. Lawn standard is now quoted at 5½c. per ft. for ½-in. and 6½c. per ft. for ¾-in.

FORK HANDLES.—There is a good business at the new discount, 50 per cent.

CEMENT.—The market is firm. A big demand is noted. We quote in car lots, Toronto, as follows: Canadian Portland, $2.50; German, $2.40 to $2.50; English, $2.30 to $2.50; hydraulic, $1.50. Small quantities are 15 to 25c higher.

METALS.

The metal market continues to exhibit weakness, both locally and in the larger centres. Pig iron is unsettled in the United States, a decline of $1.50 having been made by the Southern Pig Iron Association, which is believed will result in a decline of $1 in Northern iron. The price of English iron has also dropped materially. The reduction in the local market still maintains here, but no further declines are noted. Tin and copper continue easy in both London and New York, the fluctuations of the week showing a net reduction in both metals. Bar iron has been weakening during the past few days and prices have been shaded, in some cases as much as 5c. Large sizes of iron pipe are $1 to $2 per 100 ft. lower.

PIG IRON.—As noted above, prices in the United States and Great Britain are lower. Here, last week's prices prevail, but buyers are, as a rule, holding off for further concessions. We quote as follows f.o.b. Toronto: Hamilton and Midland No. 1, $22.50; Sydney No. 1, $20.50; No. 1 Jarrow, $21.50; No. 2 Summerlee, $25.

BAR IRON.—There is an excellent demand, but buyers are looking for concessions, and prices have been shaded, some sales being made at $2. We quote as follows: Base price is $2.05. For extras, cut to length while rolling: 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

STEEL BOILER PLATES.—A steady trade is doing with the base price still $1.96 f.o.b. Toronto.

TOOL STEEL.—A big business is doing with prices firm: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8 to 9c.; Park's "Silver," 12 to 14c.; Park's "Special," 15 to 20c.

MACHINERY STEEL.—The activity continues, with prices firm at $2 to $2.05 f.o.b. Toronto.

COKE.—The demand is excellent, but buyers are not inclined to make long contracts for coke similar to the bulk of what has been offered. Quotations range from $6.75 to $7.15 for 72-hr., and $5.50 for 48-hr. furnace coke, f.o.b. Toronto.

BLACK SHEETS.—There is a good demand. We quote: Common, $3.15 for 28 gauge and dead flat, $3.50 for 26 gauge.

CANADA PLATES.—There is a good movement from stock. Import orders are coming forward freely. Prices are steady. We quote: All dull, $2.90 to $3; half polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—An active demand is reported. Prices are unchanged throughout. We quote: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—Prices continue to fluctuate, the tendency still being downward. We quote $33 to $33.25.

TINPLATES.—Prices are firm. A good demand is reported. We quote as follows: Charcoals, $4.75 to $5 and cokes, $4.25 to $4.50 per box.

COPPER.—The demand for both ingot and sheet continues good. Prices are un-

changed locally, but somewhat lower in primary markets. We quote: Ingot copper, $15, and sheet copper, $21 to $22 per 100 lb.

BRASS.—Unchanged in price and in good demand. Discount, 10 per cent.

LEAD.—The market is firm with a good business doing. We quote: $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE.—A decline of $1 to $2 is noted in large sizes. We quote: Per 100 ft.: Black pipe, ⅛ in., $2.25; ¼-in., $2.40; ⅜-in., $2.65; ½-in., $2.85; ¾-in., $3.65; 1-in., $5.25; 1¼ in., $7.35; 1½-in., $8.95; 2-in., $12.55; 2½-in., $20; 3 in., $23; 3½-in., $30; 4-in., $36.

ZINC SPELTER.—A fair amount of business is being done. Outside markets are weaker. Prices are firm at 6¼ to 6½c. per lb.

ZINC SHEETS.—We quote base price as follows: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

SOLDER.—In good demand. Prices are unchanged. Guaranteed half-and-half is quoted at 18 to 19c., and wiping 17 to 18c.

OLD MATERIAL.

There is no chaage in this market since last week. Demand is fairly good. We quote as follows: heavy copper and wire. 11½c. per lb.; light copper, 10c. per lb., heavy red brass, 10½c. per lb.; heavy yellow brass, 8½c. per lb.; light brass, 6c.; lead, 2½c.; scrap zinc, 3¼c.; iron, No. 1 wrought, $14 per net ton; No. 2 wrought, $5; machinery cast scrap, $16; stove plate, $11; malleable and steel, $7; old rubbers, 6¼c. per lb. and country mixed rags, 50c. per 100 lb.

HIDES, SKINS AND WOOL.

The price of No. 2 green hides has dropped ½c. per lb., but cured hides are somewhat firmer. Fleece wool has fallen ½c. per lb. as was expected. The calfskin market remains firm. We quote:

HIDES.—No. 1, green, 8c.; No. 2 green, 7c. per lb.; No. 1 green, steers, 8½c.; No. 2 green, steers, 7½c. per lb.; cured, per lb., 8 to 8½c.

CALF SKINS.—Veal skins, No. 1, 6 to 14 lb. inclusive, 10c.; No. 2, 8c.; No. 1, 15 to 20 lb. inclusive, 9c.; No. 2, 7c. Deacons (dairies), each, 60 to 70c.; sheepskins, 40c. to $1.10.

WOOL.—Unwashed wool, per lb., 8 to 9c.; fleece wool, 14½ to 15½c.; pulled wools, super., per lb., 15c.; extra, 18c.

TALLOW.—We quote 5½ to 5¾c. per lb.

PETROLEUM.

The market still remains quiet. There is some cutting in Canadian grades, but best American oil is reported steady. We quote: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less.

SEEDS.

The seed market is over. Prices closed firm at last week's quotations.

MARKET NOTES.

Common square ash sifters are offering for fall delivery at about $18 per gross, an advance over last year.

Guns and ammunition are selling well for fall delivery.

Large sizes of iron pipe are $1 to $2 lower.

Building paper is 5c. and tarred felt 10c. higher.

MANITOBA MARKETS.

WINNIPEG, June 1, 1903.

TRADE continues brisk and steady, and there have been no changes made in the price lists for the week, but next week there will be a change in the price of axe handles, and possibly some other lines.

In binder twine the prices quoted are the same as last week, but this is merely nominal, as reports from the south show that manufacturers are practically out of the market for the time being.

The fact that crops are good all over the continent is a strong bull factor.

Prices for the week are as follows:

Barbed wire, 100 lb.	$3 25
Plain galvanized ... 6 to 8	3 25

NOTES.

R. C. Steele, president of The Steele, Briggs Co., Toronto, has spent the past week in the city, and is delighted with the progress of Winnipeg since he was here in 1887—the year of the bumper crop. Mr. Steele first visited the West in 1876, and in those days formed a great opinion of the possibilities of the West. Mr. Steele was the purchaser of the first wheat exported from Manitoba. Mr. Steele went West Saturday as far as Brandon, to see the experimental farm. The main object of his visit here is to talk over plans of further development of their business here in the West.

BRITISH COLUMBIA MARKETS

Vancouver, B.C., May 28, 1903.

THE Vancouver Board of Trade held a special meeting this week to discuss a proposed amendment to the Bills of Sale Act, a measure for the amendment of which is at present before the Provincial Legislature. The particular objection the merchants have to the Act in its present form is that there have been numerous instances of unrecorded bills of sale or chattel mortgages on the stocks of retail merchants, which have been suddenly recorded, at a time when the parties giving them were apparently in solvent condition. The law as at present permits of a bill of sale standing for 21 days unrecorded, in which case it is allowed to be perfect security as against any other creditors. By the simple method of renewing it every three weeks a merchant may protect a preferred creditor for an indefinite period. But the creditor is free at any time, when he may think fit, to swoop down and register the instrument, thereby shutting out every other wholesaler who may have been supplying goods on the supposition that the man was solvent and that no preference existed.

In point of fact this sort of thing has been going on for years, and several times in the past five or six years, some fine morning the trade has wakened to the knowledge that one of their number was in possession of the stock of a delinquent debtor, and the others were shut out by the unrecorded bill of sale. Of course, the wholesalers had the remedy in their own hands all the time, for it is manifestly impossible for a retail dealer to give preference to one of his creditors to the exclusion of the rest, unless the one is willing to be a party to the transaction. It must be presumed that the man who gets the bill of sale has asked for it. Where the shoe pinches is that no one knows when some new bill will turn up. It has had a very serious effect on credit, and the present move is the direct outcome of the meeting of creditors of a retail merchant who had protected one or two of his wholesale creditors at the expense of the rest. The Board of Trade passed a resolution recommending to the Legislature the following amendment to the Act:

1. To reduce the time of registration of a bill of sale to three days in cases where the goods in the bill of sale are within the corporate limits of a city or town in which is situate an office of the county court wherein such a bill of sale may be registered and in other cases within the period of 15 days afte making thereof.

The Beauty of Building

WITH OUR CELEBRATED

Sheet Metal Building Materials

First and foremost, there's the sterling reliability of the goods—you're absolutely sure of qualities being exactly as represented. Our prestige in that respect has been fairly earned, and it counts for a great deal that your customers never find ground for complaint in the goods we deliver to you.

In addition, there's the ease of handling—the studied, artistic effects—the fire and lightning proof qualities—and the many other details that have made sheet metal the popular building material for all progressive people.

SHINGLES, CEILINGS, SIDINGS, CORNICES and every other Building Requisite in the very Highest Grade. You'll do better business by handling our goods.

Send for our catalogues and read them up.

Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

To realize the magnitude of the dealings in metals and machinery with the northern district of Canada, particularly Atlin and the Yukon, it is only necessary to look over the manifests of the steamers which take on cargo at this port for the north. Every boat takes quantities of mining machinery and other hardware used in mining, and sometimes the shipments are very large. One line, in which there has been a great deal of development, is that of boilers and engines for thawing plants for Klondike claims. A steamer recently loaded three cars of these boilers, some of them being very big affairs, namely, of 300 or 400 horse-power. The ss. Amur, sailing yesterday, took some enormous castings, parts of a big hydraulic plant, for a Bucyrus dredge to be erected and operated on a creek in the Atlin district. To supply water for these numerous placer claims in the north, there have been miles and miles of hydraulic steel-riveted pipe shipped in, as well as other materials for the installation of such machinery as is used in operating the claims.

* * *

The very favorable reports from Dawson as to the progress of the spring clean-up will have a tendency to renew activity in the operations in that district. In two days, May 27 and 28, so the telegraphic advices from the northern capital state, the banks took in $1,250,000 worth of dust and nuggets. Of this amount between $800,000 and $900,000 worth was purchased, the rest being on deposit. The work has just well begun and the prospects are that the output this spring from the work of the past winter, will realize at least $2,000,000 more than last spring. It is also to be remembered that the summer diggings are now fully as important as the winter work. At one time, the first two or three seasons, every miner thought there was no other way to get the gravel out but to drift and thaw in the winter, and accumulate a dump to be washed in the spring. Now the summer workings are as numerous as the winter claims.

A very gratifying increase in the area of new ground of paying quality is being reported. Duncan's Creek, once thought to be poor ground, is turning out with rather prospecting to be rich ground, and there is a rush on to that quarter. A new town, called Mayo, is being established on the creek, and men and mining supplies are being rushed down from Dawson to the new camp.

* * *

The hardware houses in the northern trade, especially those in business in Dawson, will welcome the improved conditions. There have been heavy stocks of hardware, especially mining tools, steel, etc., carried in the north, and despite the great consumption of such supplies, there has not been as good business on account of this over-stocking, as might have been supposed. Now, the hardwaremen are looking to good times.

* * *

The hardware merchants of Vancouver are not now doing quite as much in the way of supplying logging camps and lumber and shingle mills as they have been doing up to date. The Lumber and Shingle Manufacturers' Association, at a meeting held recently, decided to curtail the output of the shingle mills by shutting down all-night shifts and reducing the amount of shingles cut in the day shift. This decision is the outcome of sluggish eastern market conditions, partially brought on by over-production. There are many shingle mills in the province erected within the past two years, and three or four in course of erection, or just completed. The United States shingle mills of the State of Washington have been competing in eastern markets, until the supply is so great, that the trade is not absorbing it readily. The effect this action will have on the hardware merchants and machine shops is easily seen. There have been at least 15 new logging camps of large dimensions put up on the Coast during the past six months, besides many small outfits getting out shingle bolts. The coasting steamers have been taking up large numbers of donkey engines to these big camps, and the merchants have had a good trade supplying tools, saws, axes, etc. When it is considered that from 20 to 30 men are employed in all the camps, and some of them have more, the supply trade can be guessed. The activity in bringing to market large quantities of logs has made a demand for tug boats. Even in boom chains there has been a scarcity.

* * *

It will be well to bear in mind that the lumber mills, other than shingle mills, are still working full time day and night, the demand for lumber in the Northwest having kept up steadily. The foreign trade from the port is also growing, though the Hastings mill is the only one loading ships at the present time. But there are always three or more at the docks.

NOVA SCOTIA MARKETS.

HALIFAX, June 1, 1903.

THE hardware business, which had kept up to a very high average since the first of the year, quieted down somewhat two or three weeks ago after the outfitting of the fishing fleet—but last week it again showed considerable more briskness and this week has opened well. This activity, however, may be only temporary as a large volume of business is not usually expected at this season of the year.

* * *

There has been a good business done this year in haying and farming tools, and the former are now being shipped to customers. This is the usual business for the first week in June. Builders' materials are still in good demand, but this trade threatened last week to be interfered with as far as the city is concerned, as a strike of the carpenters was set down for yesterday. The master builders, however, offered to leave the matter to arbitration, and the union accepted Saturday night and went to work Monday morning as usual. A contemplated strike of the carpenters at the Sydneys may yet affect the trade materially, as these growing towns have given a large volume of business to the hardware trade during the last few years.

* * *

The retail trade is now brisk in the lines usual to spring repairing and cleaning-up. Wire netting for screen doors and windows is having a good sale, and there has lately been an advance in green wire cloth, which is now quoted at $1.60 per hundred sq. ft. Paints, oils, putty, glass, in small quantities, are also in demand, as well as brushes, kalsomine, enameline and other such preparations for the house-cleaning season.

* * *

There is not much change generally in prices, nearly every line remaining firm. Zinc, however, in which there was a sharp advance some weeks ago, shows an easier feeling and is now quoted at 6½c. by the cask. Manila cordage has advanced a quarter cent, due to the strong demand for binder twine in the west, and is quoted at 14½c. Sisal remains at 11½c. The trade in cordage is not heavy at present. Turpentine is steady at 85c, in barrels, and 95c. in smaller quantities. Linseed oil remains unchanged. Other oils are firm.

* * *

Stairs, Son & Morrow are going extensively into the handling of machinery, especially in the mining line. A. M. Bell & Co. will have their commodious new premises rushed forward as rapidly as possible, and it will be ready to occupy early in the autumn. A. B. Arthur & Co. report good sales of bicycles and outfittings for the same. Cragg Bros. & Co. report business good in the line of sporting goods and in their special line, cutlery. This year they imported a number of canoes, very many of which are used here. They retail as high as $42.

R. C. H.

TRADING STAMPS IN QUEBEC.

IN accordance with the Quebec Legislature's Trading Stamp Law, which gives the municipalities in the province power to prohibit the use of the stamps, the city of Quebec passed a by-law toward that end, which was to have its second reading on Friday, May 29. The day previous to that date, however, J. E. Wilder, of H. A. Wilder & Co., furniture dealers, Montreal, and proprietors of "The Traders' Advertising Co.," a concern that gives cash coupons and which does business in Montreal, Quebec and Valleyfield, moved for a writ of injunction to prohibit the second reading and to have it declared illegal and beyond the jurisdiction of the City Council of Quebec. The court granted the petition and a writ was issued returnable on June 6.

The fight has commenced, as per the advertised intentions of one trading stamp company, and the result will be awaited with interest by business men.

A DISTINGUISHED VISITOR.

H. C. Slingsby, of London, England, the inventor of the celebrated sliding wheel trucks, is on a visit to Canada inspecting the Canadian works. While in the United States he organized a large factory in New York for manufacturing his several devices. The development of these trucks has been phenomenal. At the present time there are our factories, 25 branches and over 2,300 agents.

WITH THE KENNEDY HARDWARE COMPANY.

Geo. Smith, who has for several years represented Rice Lewis & Son, Limited, Toronto, and who is known to the trade throughout Ontario, has accepted the position of buyer with The Kennedy Hardware Co., with charge of the firm's warehouse, 49 Colborne street, Toronto. Mr. Smith is now engaged at his new duties.

A JUDGMENT RE SAFES.

An interesting judgment was given last week by Justice Street regarding the liability of a safe maker. The action was brought by a private banker carrying on business at Niagara on the Lake against a firm of safe makers carrying on business at Toronto to recover damages for breach of warranty, and misrepre enta tions upon the sale of a fire and burglar-proof vault door. Held, that the war ranties given by defendants were broken, but a loss of the money contained in the vault was not a natural consequence of the defects in the vault door. The plaintiff is entitled to recover as damages the price which he paid to defendants for the door. Judgment for plaintiff for $250 and costs of the action.

A MAN WITH "GLAD MONEY."

NOW behold, there was a man named Ammi Innitt, and he had much glad money. Yea, his wealth was so great that he was called a plutocrat.

And there was another man, and his name was Ura Nother, and he was of the tribe of Wantit.

And Ura Nother went up and down the land, making moan for that some men had shekels and some had none, charging them that were his hearers a goodly price for moaning.

Now, this man that was called Ura Nother was grievously set against the man that was named Ammi Innitt.

In the dreams that came to him by night he would see Ammi Innitt eating money like unto them that devour health food.

Whereat he would leap from his bed and howl with a loud voice and prophesy destruction upon the land and all the inhabitants thereof unless Ammi Innitt were given a theoretical poke in the ribs.

Yea, and in the daytime he would leap from before the swift chariot of Ammi Innitt, the which was called an auto by them that knew;

And with each leap he would roar sorely and say that Ammi Innitt was a crusher of humanity and an enemy to mankind.

However, it was not the fault of Ammi Innitt that his father had led the lambs to the slaughter and had sold them the water that was in stocks and the wind that was in bonds, and had thus garnered unto himself the shekels that he had been unable to check through when he journeyed to that land whereof the insurance agents do always talk.

Yet, as the days passed the rage of Ura Nother increased and waxed exceeding hot against Ammi Innitt.

And there came a day when Ura Nother was walking up and down through the city and he passed by a field wherein he saw a man delving. And the man was Ammi Innitt.

And Ura Nother leaned up against the fence that was about the field and breathed hard, saying:

"Hast thou then gone to work, O, foe to the people?"

"Of a truth," responded Ammi Innitt, "thou seest."

"Surely I see, and my heart leapeth with gladness. How long hast thou worked?"

"More than ever thou didst," answered Ammi Innitt, lifting his plug hat and wiping the sweat from his brow, "for I have coaxed callouses upon my hands these 20 days."

"It is well! It is well!" cried Ura Nother. "Now, may I die content, for I have seen the rich brought down and the proud made to labor. Dost thou get much wage?"

"Not any," said Ammi Innitt.

"It is better! It is better!" cried Ura Nother, with a great laugh.

Then, he continued speaking, saying:

"Now thou seest how it is with the downtrodden and the poor, for thou must hump thyself even as them."

"Not so," Ammi Innitt made answer, "for I am but splurging thus that I may lose some 50 lb. overweight, as my doctor has ordered."

Then did Ura Nother straighten himself and howl all the more, calling Ammi Innitt a scoundrel and a wretch that was taking the bread from the mouth of the hungry and the garments from the back of the naked.

Whereupon Ammi Innitt offered unto Ura Nother that he come into the field and labor also, for he saw that he needed to lose flesh, having grown fat from idleness and wheezy from much talking.

But Ura Nother went on his way in anger, and he reviled Ammi Innitt more for working than he had for not working.

This teacheth us that if we are not going to be satisfied with what our neighbors do not do, we shall be even more dissatisfied with what they do.

Is it not so?

Thou mayest bet it is, with an exceeding great isness.—W. D. Nesbit in Chicago Tribune.

EDISON AFTER ONTARIO NICKEL.

The announcement has been made by Frank Denton, Toronto, representing Thomas Edison, the United States inventor and manufacturer, that the latter, who some time ago acquired considerable nickel land north of Sudbury, has decided to build a smelter near Sudbury, when his mineral possessions warrant it, and he will refine the metal there as far as practical, probably to 80 per cent. of the metal contents.

CANADIAN ELECTRICIANS TO CONVENE.

The thirteenth annual convention of the Canadian Electrical Association is to be held at the King Edward Hotel, Toronto, on June 10, 11 and 12. The secretary, C. H. Mortimer, says that provision has been made for a profitable and enjoyable meeting and the programme which he has sent out certainly supports his statement. Among the subjects to be brought before the convention are: "Long Distance Transmission," by Paul Lincoln, Pittsburg; "Individual Electric Drive and its Relation to the New Shop Methods," by R. T. Lozier, Cincinnati: "Some Points Relating to Submarine Power Cables," by G. H. U. Holman, Quebec; "Single Phase Attornation Motors as a Means of Increasing Station Earnings," by W. A. Layman, St. Louis; "Transformers for High Voltage Transmission Lines," by J. W. Farley.

On Thursday night the association dinner will be held at the King Edward. The president of the association is B. F. Reesor, Lindsay, and the secretary is C. H. Mortimer, Toronto.

NEW SMELTING FURNACES.

Owing to the large orders that they have been receiving for babbitt metal, solder, "Columbia" phosphor tin, etc., the Syracuse Smelting Works, Montreal, have been obliged to add more furnaces and to work day and night.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion; cash in advance. Letters, figures, and abbreviations each count as one word in estimating cost.

SITUATIONS VACANT.

BLACKSMITH—One or two years' experience preferred; steady job for right man. J. Dignan & Son, Exeter. f

BOILERMAKERS—One first-class boilermaker and one flanger, steady job to good men. Robert Bell Engine & Thresher Co., Seaforth, Ont. f

GENERAL blacksmith — At once — Steady job for good man. M. L. Farrell, Glencoe, Ont. f

HARDWARE clerk, junior, state experience, age and salary expected at once. Macnab Bros., Orillia. f

SAWMILL engineer — At once — Apply, stating wages expected, to the Sheppard Lumber Co., Limited, Brute Lake Station. f

STEAMFITTER—To instal gasoline engines in launches, Canada Launch Works, foot of Carlaw Ave. f

FOR SALE.

BLACKSMITH shop for sale or rent—with tools; on easy terms; a good stand and a good shop. Apply to Mrs. John Lonsdale, Lloydtown. f

HARDWARE BUSINESS. (old established) in rapidly growing town of Collingwood, Ont., owner retiirng. Apply to J. Henderson, Collingwood. (21-5)

ARTICLES WANTED.

WANTED — For cash—One good second-hand sawmill engine, 75 h. p.; also gang edger. Address John P. Newman, Wiarton, Ont. f

WANTED—A saddle tank locomotive; about 25 tons weight, must be in good condition; give full specifications and price. The Lakefield Portland Cement Co., Lakefield, Ont. f

PAINT, OIL AND BRUSH TRADES

SHERWIN-WILLIAMS' NEW WORKS AT MONTREAL.

THE Sherwin-Williams Co., the large paint and varnish makers, have let a contract to Peter Lyall & Sons, for the erection of new factory buildings on their property at Centre, Atwater and St. Patrick streets. Excavations were commenced on May 23.

The buildings comprise a four-storey office and warehouse, with a frontage of 289 ft. on Center street and a depth of 50 ft.; a paint factory, immediately in the rear of the office and warehouse building, four storeys high, 220 ft. long and 50 ft. deep, and a modern power house, 103 ft. long and 72 ft. deep. The buildings are made as nearly fireproof as possible by the erection of fire walls and the enclosing of the stair cases in brick walls. The floors are of mill construction. The grouping is such as to admit plenty of light and air. The buildings were designed entirely by the architect of the company's own staff.

The main entrance to the new plant, which will be through the office and warehouse building, and is intended for the use of both factory and office employes, will be of cut stone in the Doric style of architecture. In the gable of the pediment the trade mark of the company will be hewn out of the stone. The vestibule will have marble wainscoting, marble steps and tile floors.

The warehouse capacity of the plant will be more than double that of the old one.

The factory building will be equipped throughout with the most modern and approved machinery. The company has its own machinery shops and designs and builds its own mixers, mills, etc. The machinery will be electrically driven, each department having its own motor. Throughout the entire plant labor-saving devices, such as hydraulic lifts, etc., will be installed. A tin can factory will be a feature of the new facilities. The company has been making its own tin cans in the States for years, and in establishing a tin can factory in Canada it is following a well-defined policy of manufacturing, as far as it can, everything that enters into paint making.

The power house will be a model of economy in operation. It is to be equipped with two Corliss engines, one of about 130 horse-power, the other, about 200 horse-power. These will drive two Westinghouse alternating generators, one of 75 kilowats, the other, of 120 kilowats, furnishing electrical power for the entire plant. The Sherwin-Williams Co. have a reputation for up-to-date power equipment.

The buildings are so arranged as to facilitate the handling of goods in the speediest and least laborious way. The company has its own sidings, the Grand Trunk Railway running switches into the grounds, one for bringing in raw materials, another for handling the finished products, and a third for supplying coal to the power house.

A very interesting feature of the new factory will be the industrial betterment work of the company. A lunch-room, with a well-appointed kitchen annexed, a club room, shower baths, and rest rooms for the women will be installed, and practically the same privileges that are enjoyed in the large Cleveland plant of the company will be inaugurated.

The general manager of the company, Walter H. Cottingham, a man of Canadian birth, and the general superintendent, J. C. Beardslee, spent some time in Montreal recently in closing and approving the contracts for the new plant.

TURPENTINE FOR SOAP MAKING.

A turpentine soap has been invented by Belle L. Johnson, of Cincinnati, O., who gives the following particulars to an exchange:

"The object of my invention is to provide a soap which will not only have exceptional cleansing qualities, but will make fast instead of dissipating the colors in colored washable fabrics; and my invention consists in the soap and the method of making the same hereafter described and claimed. My improved soap is composed of coagulated turpentine and pure white soap, consisting preferably of 25 to 35 parts of oil or spirits of turpentine and 65 to 75 parts of pure white soap, sufficient water being used to reduce the soap to a semi-fluid state. The coagulated turpentine is prepared by heating turpentine until incipient boiling sets in, then adding finely divided white soap, until when tested by cooling a gum-like transparent mass is produced. This will require approximately one part of soap to fifteen parts of turpentine. The white soap is prepared by stirring together finely-divided white soap and boiling water, preferably in the proportion of four parts of soap to one of water. This should produce a semi-fluid sticky mass. The ingredients thus prepared are then mixed, stirred thoroughly, and poured in to moulds."

PAINT AND OIL MARKETS.

TORONTO.

THERE is still a big movement in sundries, but the demand for white lead, linseed oil and turpentine is light. There is a shortage of turpentine stocks on the local market, and prices are steady for that reason, but it is expected that when the supply is larger, prices will be lowered, owing to lower prices at Savannah and stiff competition here. Linseed oil keeps firm and may advance before the end of the week. Other goods are steady. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5.10 to $5.25. No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.75 to $5; ditto, in kegs of 100 lb., $5.25 to $5.50; No. 1, in casks of 560 lb., $4 to $4.25; ditto, in kegs of 100 lb., $4.25 to $4.50.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In five-gallon lots, 60 to 85c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.30 to $2.40; white, $2.35 to $2.45 per gallon; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8 to 8½c. per lb.; cabinet glue, in bbls., 11½ to 12c.; emery glue, in bbls., 17c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

MONTREAL.

This branch of trade is quite active at the moment, and customers who are complaining that they do not get their orders filled as rapidly as they would like, should bear in mind that makers and jobbers generally have had very serious obstacles to overcome this season, owing to the labor troubles here. In the first place, the dock strike upset matters badly as it tied up and blocked a lot of material that was badly needed. Then the general feeling of unrest among the working classes has up to very recently made it very difficult for makers to keep a full staff of employes at work. This, of course, has put them back with their orders. Of late, however, since the street railway strikers were defeated, the work people have been showing a less independent spirit in this connection, and work is progressing more favorably. The only unsettled spot in the market as regards values is turpentine, which has declined again this week 3c. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $5 to $5.25; No. 1, $4.27½ to $4.57½; No. 2, $4.40 to $4.50; No. 3, $4.02½ to $4.12½; No. 4, $3.65 to $3.75, all f.o.b. Montreal. Terms, four months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$4.75 in casks and in kegs, $5.

DRY WHITE ZINC.—Pure dry, in casks, 6¼c.; in 100-lb. kegs, 6¾c.; No. 1, zinc, in casks, 5¼c.; in 100 lb. kegs, 5¾c.

WHITE ZINC (ground in oil).—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

PUTTY.—We quote: Bulk, in barrels, $1.60; bulk, in 100-lb. packages, $1.85; bladders, in barrels, $1.90.

ORANGE MINERAL.—Casks, 7c.; 100-lb. kegs, 7¼c.; smaller quantities, 8¼c.

RED LEAD.—Genuine red lead, in casks, $4.50; in 100 lb. kegs, $4.75; in less quantities, $5.75 per 100 lb. No. 1 red lead, casks, $4.25; kegs, $4.50 and smaller quantities, $5.50.

LITHARGE.—Ground casks, 5c.; in less quantities, 5½c.; flake litharge, casks, $5.25; smalls, $5.75 per 100 lb.

LINSEED OIL.—Raw, 1 to 4 bbls., 59c.; boiled, 62c.; raw, 5 to 9 bbls., 58c.; boiled, 61c. Terms, net cash in 30 days. Delivered in Ontario, between Montreal and Oshawa, at 2c. per gallon advance.

TURPENTINE.—Single bbls., 75c.; 2 to 4 bbls., 73c. Terms, net cash in 30 days.

BENZINE.—25 to 26c.

SHELLAC VARNISH.—Pure white, $2.20 to $2.35; orange, $2.10 to $2.25.

MIXED PAINTS.—$1.20 to $1.40 per gallon.

CASTOR OIL.—8¾ to 9¼c. in wholesale lots, and ½c. additional for small lots.

SEAL OIL.—48 to 50c.

COD OIL.—35 to 37½c.

PURE CANADIAN PARIS GREEN.—Petroleum barrels, 15¼c. per lb.; arsenic kegs, 15½c.; 50 and 100 lb. drums, 16c.; 25-lb. drums, 16½c.; 1-lb. packages, 17c.; ½-lb. packages, 19c.; 1 lb. tins, 18c.; ½-lb. tins, 20c.

PURE ENGLISH PARIS GREEN.—Petroleum barrels, 14½c.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. paper boxes, 16c.; 1-lb. tins, 17c.

WINDOW GLASS.

TORONTO.

There is a fair movement from stock. Import orders are coming ahead nicely but are not likely to be all in before the end of the month. Prices are steady. We quote as follows: Star, under 26 in., $3.80; 26 to 40 in., $4; 41 to 50 in., $4.50; 51 to 60 in., $4.75; 61 to 70 in., $5; 71 to 80 in., $5.50. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days.

MONTREAL.

Business has been fairly active and prices are steady. We quote as follows: First break, 50 ft., $2; second, $2.10 for 50 ft.; first break, 100 ft., $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

ICE CREAM WITHOUT LABOR

The "XXth Century" freezer is a new and improved device put on the market by United Factories, Limited, Toronto, for bringing about the most satisfactory results in making ice cream without the customary laborious agitating process and at the same time will save many times its value in ice and salt. It cannot get out of order and is always ready for use. It has proved its claim as being an invention of great merit, and is certainly worthy of the attention of every user of this refreshing delicacy. United Factories, Limited, Toronto, will be pleased to furnish full particulars to all parties interested.

"ANCHOR"

LIQUID PAINTS.

These paints at the price are a formation upon which to build a large and growing trade. Like the paint itself, your reputation will be passed from mouth to mouth. Would you like your store to be known far and wide as THE place to get paints? If so, let us hear from you.

T. B. Desmarteau & Co., painters, etc., Montreal, have been registered.

EXTRAORDINARY INCREASE

Herewith "HARDWARE AND METAL" takes great pleasure in reproducing a snap shot of a window in the well-equipped hardware and paint establishment of Messrs. Chestnut & Sons, Fredericton, N.B. The camera has faithfully depicted what may truly be said: A phenomenal growth of the ready-mixed paint trade.

For the present year, 1903, we understand that Messrs. Chestnut's sales for the popular "ELEPHANT" brand will largely overtop even their generous sales for 1902. Explaining the popularity of this paint, Messrs. Chestnut say the sign speaks for itself—"The 'ELEPHANT' Pure Linseed Oil Paints are the Best for All Purposes."

QUEBEC.

Lamplough & McNaughton, general merchants, Montreal, have dissolved.

George B. Reid, general merchant, Greenfield, has effected a compromise.

A meeting of the creditors of J. B. Prefontaine & Co. is to be held on June 6.

The Duplex Gold and Copper Mining Co., Montane, have obtained a charter.

F. W. Lamplough & Co., general merchants, Montreal, have been registered.

Patwin Perron & Co., lumber, etc., Lake St. John, have obtained a charter.

McNeice & Orchard, bicycles and sporting goods, Montreal, have been registered.

H. Hudon & Co., general merchants, St. Angele, have assigned to V. E. Paradis.

Leon Diotte, general merchant, Joynt, is offering to compromise at 50c. on the dollar.

Etienne Allard, general merchant, Herbertville, is offering to compromise at 35c. on the dollar.

Application has been made by the New England Asbestos Co., Thetford Mines, for liquidation.

The assets of the general business of W. H. Shouldice, Glen Bean, Que., are to be sold by auction.

Adrien Blondin has been registered as a partner in the plumbing firm of A. Blondin & Co., St. Hyacinthe.

Joseph Vanier, general merchant, Montreal, has assigned and is offering to compromise at 25c. on the dollar.

The foundry of Chas. Julien, manufacturer of threshing machines, etc., Pont Rouge, was destroyed by fire.

Trefle Valle,, manufacturers sashes and doors, Ste. Thecle, has assigned to Gagnon & Caron, and a meeting of the creditors was held on the 4th inst.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITISISM

Edited by W. Arthur Lydiatt, TORONTO.

NOTE. Herein are discussed the principles and practice of advertising. Subscribers are invited to send Mr. Lydiatt specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

To insure the greatest results one must advertise right. The methods, mediums, space, circularizing, etc., must be correct in every detail, or the largest results will not be obtained. It is, therefore, false economy to use poor and careless methods, improper mediums, insufficient or superfluous space, inferior circulars or other printed matter.

To attempt to save money by issuing cheap circulars is no economy. A circular poorly printed, on a cheap grade of paper, is seldom read by its recipient. It usually goes at once to the waste basket, or into the stove, with not even a glance at it. And the impression at once received is that a firm who cannot afford or knows no more than to send out such stuff as that, is certainly not offering anything worthy of consideration. The logical conclusion is that the firm that pays as little attention to these details is consistent enough to give the same kind of attention to the other details of the business.

Even if read, the cheap circular creates in the mind of the reader a feeling of distrust towards the house which attempts to economize by the use of such literature. A neatly printed circular, on good paper and well written, creates a favorable impression at once. The largest cost of cheap circulars is simply money thrown away.

Another kind of false economy is the irregular, intermittent advertising—practised so much by a certain proportion of retailers—and others.

You place an ad. in the paper. A reader sees it—reads it through—is favorably impressed—thinks he will send for the article advertised—or he decides to "call in and get one next time I'm down town"—but not just then. Perhaps he forgets about it, and if he never sees your name in the paper again, chances are he will never be reminded about it again.

"The" stores in any town are the stores which advertise the most regularly in the newspapers. The proper kind of advertising will build up any business so that it will become one of "The" stores—the representative store in the trade.

Advertising, to be successful, must be continuous. One big ad. inserted once, or only occasionally, will not take the place of an ordinary ad. published regularly. Might as well think of taking one huge meal a week, instead of the three regulars every day. You'd feel starved most of the time, and so the business which is represented by an occasional large ad., or even an occasional small one, is simply starved in between times.

A small ad. appearing regularly is worth much more than the same amount of space concentrated into one big ad. for one issue. The public has a short memory for things advertised—there are so many of them. It is soon forgottrn, and its usefulness gone. The smaller ad. may not attract so much attention at first, but if persisted in day after day and week after week, the more permanent results will follow. The name of the firm and the character of the store and its offerings, become well fixed in the mind of the public, and the results will finally come. Successful advertising means persistent advertising.

I reproduce this week another ad. of Magladery Bros.—they of the good hardware ad. reproduced a couple of weeks ago. This one is not quite so good; it does not show the same attention. Still, for all that, it is interesting. I think the heading, or introduction might be improved. They might have said, "Our goods and prices are trade winners—a sufficient inducement to visit our store," and followed with a little talk about the general policy as regards prices.

The ad. could be displayed just as effectively in about half the space, but I suppose this is a regular space, used in every issue. Why not, then, furnish sufficient copy to make it appear that you needed that much space each issue?

I might take exception to the announcement, "Let us help you houseclean," for I think that housewives will agree with me that simply selling them a carpet-beater, scrub brush or duster, does not "help them houseclean." These articles prove valuable assistants, of course, so I think that line might better have read, "To help you houseclean." It would be more effective—more literally true.

HEATING AND PLUMBING

NATIONAL CONVENTION IN MONTREAL, JULY 1, 2 AND 3.

At a meeting of the Executive Committee of the National Association of Master Plumbers and Steamfitters of Canada, held recently in Halifax, it was decided to hold the convention in Montreal on July 1, 2 and 3, and the Executive Committee have made arrangements with the railway company for reduced rates from all points in the Maritime Provinces.

As matters of importance will come up before the convention the president, Frank Powers, of Lunenberg, N.S., is very desirous that every local association in the Dominion should be represented at the meeting. The revised Halifax resolutions will come up for ratification, and means will be discussed whereby they could be efficiently put in force. It is the desire of the National officers that every province should be organized into provincial associations. There can be no question of the great benefit to be derived from such organizations. The work accomplished by the Ontario Association since it has been organized is an evidence of this fact.

President Powers extends his hearty congratulations to the officers and members of that association for the work they have accomplished during the year. He also asks that each of the officers should have a full and complete report ready for the convention, of the work done by the departments under their jurisdiction. This applies to the chairmen of the various standing committees. President Powers was in Sydney, C.B., recently, completing the organization of the local association in that city. What, with the organization at both ends of the Dominion, Sydney, C.B., and Vancouver, B.C., and in the Province of Ontario, the reports presented at the forthcoming convention should be of interest to the delegates and an incentive to the incoming officers to complete the work of their Dominion organization.

It is to be hoped that every plumber and steamfitter in the Dominion who can make use of this excellent opportunity of meeting brethren of the craft, and of discussing matters of interest to the profession, will make it a point of being present and adding his mite to the success of the convention.

SHOULD HOUSE DRAINAGE BE TRAPPED?

Some time ago an article appeared in "Hardware and Metal" in reference to the trouble experienced in breather pipes. In suggesting that these be dispensed with, an attachment to the drainage system was mentioned. Just whether sufficient benefit would be derived from their use to compensate for the evil effects that might come from them, and considering, at the same time, their unsightly appearance in front of houses, the contention was that fresh air could be drawn into the pipes from the plumbing fixtures in the house.

While our idea has been endorsed in the main the question is asked, what about buildings that are shut up, say, for weeks at a time, and where the plumbing fixtures are not used?

This, of course, is a serious aspect of the case, but the percentage of such buildings is so small, that the latter need hardly be considered. In discussing all questions, it is a hard proposition to cover every isolated case, and they must be dealt with in a general sense, or on the basis of the greatest good to the greatest number. There can be very little question in cases of the nature referred to, that water in the traps would become viviated quicker without the breather than with it, and possibly to a greater extent.

The question can be more efficiently overcome by enacting a by-law, compelling the use of heavy cast iron pipes for all house drainage systems and dispensing with the house-traps. With so many avenues of escape for sewer gas, as would be opened up, there would be very little fear of any contagion from poisonous gases.

It is said that there are no less than 30,000 soil-pipe stacks in the city of Toronto. What an immense relief to the sewage system this would be, compared with the out-of-date system of closing up all means of escape and providing, at intervals, escape shafts where the discharge gas is of a deadly nature.

The question may be raised that there is a possibility of the stack pipes being closed up in the winter by frost. This difficulty can be overcome by insisting that all pipes, from about 2 ft. below the roof upwards, shall be not less than 4 in., and must, in all cases, be one size larger than stack pipe. This would give a 5-in. outlet to a 4-in. stack. Then, where the stack had to extend more than 5 ft. above the roof, the increase should be two sizes larger. Such a by-law as this, we understand, would receive the endorsation of sanitary experts and members of the plumbing fraternity. It is a question that cannot be too quickly discussed.

WANTS TARIFF ENFORCED.

H. T. Bush, manager of The Standard Ideal Factory, left on Tuesday evening, for Ottawa, where he interviewed the Minister of Customs with regard to the manner in which the tariff on enamelled ware is enforced. At present the regulations governing the importations of enamelled ware are inefficiently enforced, and such products are introduced into Canada from the United States without paying the full duty as provided by the Canadian tariff. Mr. Bush, who was introduced to the Minister by H. A. Ward, M.P., pointed out the disadvantage suffered by Canadian factories in consequence of the non-enforcement of the tariff regulations, and asked that instructions be given to Customs officers to see that the duty as provided by Act of Parliament be collected. The Minister promised to give consideration to the matter.—Port Hope Times.

WHY LICENSE A MASTER PLUMBER?

According to a decision recently given by Mayor Peterson, of Salem, Mass., it is not necessary for a householder to employ a licensed plumber to instal plumbing fixtures, but he may do the work himself. A resident of that city, who had done his own plumbing, made application to have the water turned on and the work inspected. The officials in the city hall declined to recognize the right of a citizen to do his own plumbing, and insisted that a licensed plumber should have done the work. On appeal to the mayor, the party got the water turned on and got passed. This would seem to be an injustice to the licensed plumber. If a master plumber is compelled to procure a license the law that compels him should protect him.

VARNISH REMOVER
PAINT REMOVER

Are you never asked for it? Here it is! Cuts through varnish in a minute. Paint takes a little longer, but it does it just the same. Saves time, saves the wood, saves temper, injures nothing, contains no acid, does not stain or burn the fingers, and there's money in it. Every painter, every varnisher wants it—must have it. You can sell it for $3.00 and make a good profit. Want to see a sample? We'll mail you one. Commence on

POWER AND HEATING THE "KING EDWARD" HOTEL.

THEORETICAL ideas as to the best system of heating buildings may be written, but, after all, there is nothing like practical results. With this idea in mind, it will be of considerable interest to read a description of the plant installed in the "King Edward VII." Hotel.

To generate necessary steam to operate the power and heating plant in so large a building as the "King Edward" Hotel, was a proposition that required not only a great deal of thought, but experience. The Bennett & Wright Co., Limited, of Toronto, the contractors, claim to have installed a perfect system, one that is meeting all requirements and demands.

It required no less than four 100 horse power horizontal steel tubular boilers to generate sufficient steam. These boilers are all equipped with the Jones underfeed system of mechanical stoking, by the use of which device exceptionally economical results are secured, requiring little labor and using the cheapest grades of fuel and at the same time preventing the smoke nuisance. The steam from the boilers is conveyed in high-pressure mains at a pressure of 90 lb. per square inch, and after passing through separators and having all condensation removed, is used for operating the following machinery: Two 250 h.-p.; one 150 h.-p. and one 75 h.-p. Robb Armstrong high speed self-regulating engines, directly connected with electrical generators, for supplying light for the building and power for operating the elevators, laundry machinery, etc.; two 70 h.-p. Wheelock engines, for operating the ice-plant; two 30 h.-p. Robb Armstrong engines, for operating the mechanical stokes; two boiler feed pumps; two vacuum pumps; two brine pumps; two Johnson air compressors; also, the engines operating the ventilating fans, etc.

The exhaust steam from all these engines, after the same has been passed through oil and grease separators and all oil, etc., used for cylinder lubrication has been extracted, is connected to a steel equalizing tank, and from there is distributed through miles of steam pipes to supply steam to the radiators throughout the building. Provision is also made for automatically supplying live steam to the equalizing tank through a pressure regulating device when there is not sufficient exhaust steam for the purpose.

There are no less than 690 radiators in the building, containing about 35,000 sq. ft. of heating surface, and the supply of steam to all is regulated by the Johnson automatic heat control. Thermstats are placed in the various apartments, which may be set at any desired temperature, and so sensitive are the valves that they are opened or closed automatically by a variation of one degree in temperature. The operation of the valves is effected by compressed air supplied by the Johnson air compressors, before referred to.

In order that the best results could be obtained in connection with the heating apparatus, the patent vacuum system has been installed. The principle of operation of this system is based on a flow of steam and condensation from a pressure slightly above into a pressure slightly below that of the atmosphere, or into a partial vacuum which has been effected throughout the supply-pipes, radiators, and return pipes in advance of turning on the steam, which, when turned on, flows into said vacuum pumps and is controlled and regulated by the thermostatic action of the air valves. The advantages of this system, when using exhaust steam for heating purposes, will be better understood when it is stated that the loss due to back-pressure on the engines is from 2 to 3 per cent. for every pound of back pressure. Ordinary plants require from 2 to 6 lb. of pressure to fill the radiators and pipes, while with this apparatus no back-pressure is indicated.

In addition to the before-mentioned machinery, the boiler and engine-rooms contain three Tobey automatic water-heaters for the supply of hot water throughout the building, feed water-heaters, purifiers, etc.; also a marble gauge-board containing high-pressure gauges, indicating steam pressure on the power mains; compound gauge, indicating pressure of vacuum in the heating mains; vacuum gauge, indicating the number of inches of vacuum in the drip pipes; an altitude or water-pressure gauge, indicating the pressure in the water mains, and a recording gauge, keeping a record of the steam pressure at all times.

Every detail was thoroughly considered. The firm not only installed the heating and power plants, but they also put in a perfect system for sweeping the carpets, described in a former issue of "Hardware and Metal." The device has been given a very thorough and practical test and fully performed all that was claimed for it.

PLUMBING NOTES.

TORONTO.

Fifteen plumbers at Sherbrooke, Que., are on strike.

The Bricklayers' Union, Toronto, decided to return to work after being out one month. They went out on strike in sympathy with the builders and laborers, who have not won their strike.

Senator Lougheed has a bill before the Senate to prevent international officers of trades' unions visiting Canada. A deputation from Toronto left for Ottawa on Wednesday to oppose the measure.

The Eureka Mineral Wool and Asbestos Co., 71 York street, Toronto, are just completing their contract at the King Edward Hotel. The firm covered over 2,000 ft. of pipes with their covering, which was selected on account of the high pressure required to operate so extensive a system.

Geo. Clapperton, superintendent of The Bennett & Wright Co., Limited, Toronto, met with a very painful though fortunately, not a serious accident, Monday of this week. He, by some means, fell from a platform of a street car and received some nasty cuts. He has been laid up at his home, but is around again.

A despatch from Port Dover, Ont., states that The Port Dover, Ont., Gas and Oil Co. have been successful in striking an excellent flow of gas at a depth of 1,140 ft. The town is much excited by the discovery, which means sufficient natural gas to supply the place with fuel and light.

Bruce Price, New York, ex-president of the Architectural Society of America, architect of the Chateau Frontenac in Quebec, the Royal Victoria College, Montreal, presented by Sir Donald Smith; the East End station and Hotel Place Vigor, Montreal, died in Paris, France, on Tuesday.

Calgary, N.W.T., is considering the establishment of a gas plant. The question as to whether to operate the plant by a private company or whether by the municipality, has been considered. A suggestion has been made to operate it in conjunction with the electric light system or the water-works system, to obtain the greatest economy in working.

The Board of Public Service, Mansfield, Ohio, have revoked all licenses issued to master plumbers. Renewal licenses will only be issued on the furnishing of bonds and a compliance with the new regulations which require master plumbers to report to the water-works department all new connections made on service pipes. The plumbers' licenses are now issued by the water-works department.

Some Toronto master plumbers are enthusiastic baseball players? Others are professional fishers. None more so than President Mansell, of the Ontario Association. Mr. Mansell is arranging a fishing party to go to Lake Scugog the end of next week. He has already secured the address where fresh fish can be bought and is now open to receive the names and addresses of his friends to ship same to.

Joseph Wright, president of The Bennett & Wright Co., Limited, Toronto, was up in Muskoka this week arranging for the installing of the steam-heating plant in the Monteith Hotel, Rosseau. The firm are also installing a steam-cooking apparatus. Mr. Wright states that Muskoka is looking charming and has every prospect of a successful season.

"Dominion Brand" Tarred Felt AND "Gauntlet Brand" Pitch

Geo. W. Meggitt, shed on Albion street, $20.

Wm. Buck Stove Co., for erection of a moulding shop, mill room, and stove room, as a part of new factory on Elgin street, $18,600.

Norman Fonids, brick dwelling on Rose avenue, $1,250.

Geo. Howell, brick house, on Fair avenue, $1,250.

TORONTO.

The Reliance Loan Co., alterations to office, 81 King street east, to cost $2,000; C. J. Gibson, architect.

W. J. Herbert, two-storey brick and stone dwelling, 626 Dovercourt road, to cost $3,500; W. J. Herbert, architect.

J. M. Kilgour, two-storey and attic pair of detached brick dwellings, 483 and 485 West Marion street, to cost $5,000.

J. Grafton, one pair semi-detached brick dwellings, corner Rathbourne avenue and Cottingham street, to cost $3,000; Mr. Macklem, architect.

Chas. Mould, two pair semi-detached two-storey brick dwellings, Nos. 98 to 104 Royce avenue, to cost $6,000.

W. A. Elliott, two pair of semi-detached two-storey-and-attic brick dwellings, north side of Empress crescent, near Crescent road, to cost $10,000.

Chas. Coatsworth, two-storey brick addition, 233 Wilton avenue, to cost $1,200; M. Hall, architect.

Geo. Phillips, two detached two-storey and half stone and brick dwellings, 552 and 554 Huron street, to cost $8,000.

BUILDING NOTES.

TORONTO.

The effect upon building operations of the May strikes here is reflected in the total amount represented by the permits issued at the City Hall. In May last year permits were taken out for building aggregating in value $493,560, and the total for May this year was $210,800, less than half the total of a year ago. The total value of permits issued to the end of May last year was $1,500,671, and this year to date $1,189,568.

A permit was issued during the week to S. and F. Perrin for the erection of a new theatre on Adelaide street, to take the place of the old Toronto Opera House, recently destroyed by fire. The new building is to be of brick and stone and is to cost $40,000. Mason & Painter are the architects.

Plans for the new freight sheds for the G.T.R., on the old Government property north of Front street, will be started at once. Building will begin on July 1.

Toronto Mission Union are contemplating erecting a new building at the corner of Hayter street and Laplante avenue, to cost $15,000. Over $7,500 of the amount required has been subscribed.

TORONTO JUNCTION.

J. Lennox is building two pair of houses on Dunn avenue, near Humberside and Toronto Junction.

Mr. Proctor is erecting a pair of houses on Annette street.

Mr. Joy, the contractor, has commenced the excavation for the new post office.

Several Philadelphia gentlemen have purchased vacant land on which to build small houses to rent to working men. They have also purchased the land on the south side of the town to build residences for themselves.

QUEBEC.

One of the most elegant stores in Quebec is the new up-town branch of the Mechanics' Supply Co., at 101 St. John Street. The first and second flats of this building have been fitted up as a show room, and contain a rich display of the very latest ideas in sanitary, heating and electric appliances. Also a large assortment of mantels, grates, tiles, gas logs, etc., is being shown. This company have taken out a permit for an $8,000 building at the corner of St. Andrew and St. Paul streets.

J. P. Ouellet, architect, Quebec, is now preparing plans for the construction of a large wing to the Ursuline Monastery at Roberval, Lake St. John.

The Truro Condensed Milk Co., at Huntingdon, Que., are erecting buildings to cover an area of an acre and a half.

ST. JOHN, N.B.

Plans have been prepared and tenders called for the new building to be erected and occupied by the new paper which will be started here in the near future. The building will be erected between The Telegraph office and the old Progress building. It will be 40 x 60 ft., and five storeys high.

MONTREAL.

Extensive additions, aggregating $160,000, will be made to the Montreal Court House during the long vacation; Martineau and Prenoveau are the contractors. The same people have the contract for the St. Denis street subway excavation.

Henry Morgan & Co., Montreal, will make alterations to their store to secure greater floor space.

The Town Council of St. Henri, a suburb of Montreal, has decided to ask Mr. Carnegie for $50,000 with which to build a public library.

ONTARIO.

Plans are being prepared for a new station at Kerwood, Ont.

A by-law will be submitted to Belleville ratepayers asking them to provide a $7,500 site upon which the Government proposes to build a $75,000 drill shed.

MANITOBA.

A Winnipeg despatch says that buildings to the value of over $3,000,000 are under construction in Winnipeg, and that it is estimated that the total for the year will amount to at least $8,000,000.

HAMILTON PLUMBERS' WAGES.

The master plumbers of Hamilton, Ont., have, after a conference with the journeymen, agreed to an advance of 2½c. per hour in wages, which makes the scale 27½c. per hour. Last year the men were granted an advance of 5c., the wages previous to that time being 20c. per hour.

NEW ROOFING MATERIAL.

The Eureka Mineral Wool and Asbestos Co., Toronto, are offering "Paroid Roofing" to the Canadian trade. This is a permanent roofing, containing no tar and requires no paint at time of laying. It has won a remarkable reputation in the United States, one order from the United States Government calling for 1,200,000 sq. ft. of "Paroid Roofing" for shipment to Manilla, an order said to be the largest ever made in Canada.

FINANCE AND INSURANCE

THE public interest in the advantages of life insurance is undoubtedly becoming more in evidence every day, and as a profession it is attracting many of the best men in the country. To one with tact and ability it promises good remuneration, the standard companies last year having paid their agents fully $60,000,000 in commissions. During the past few years hundreds of banks and petty assessment associations have gone to the wall, but no standard life insurance company has failed. The accumulated resources of the standard companies are considerably in excess of two thousand million dollars and every city of any importance derives material advantages from its investment. Nothing in finance is more carefully watched and conducted than the investment branch of a life insurance business. A manager of one of our largest and most prosperous insurance institutions recently informed "The Grocer" that every investment made by his company received his individual attention, and that every application was not only thoroughly investigated by himself, but that where electricity or anything he did not thoroughly understand was a factor in the security he associated with his own judgment that of the best experts in that particular line the country could produce. This will give the people an idea of the wide difference existing between sound financial institutions and many of the innumerable societies and orders carried on under the assessment plan who are in many cases not quite so particular as to results.

* * *

New five and ten-dollar bills have been issued by the Molsons Bank, the designs of which are somewhat different to anything that has been produced before. Combined with the green and brown printings is a black vignette, work of a very high order, the vignette in the brown-color printing also being as important as that of the black. The whole design is finely executed. The British American Bank Note Company, of Ottawa, produced the bills.

* * *

The report for the year ended April 30, issued by the Bank of Montreal, shows that Canada's leading monetary institution has had another most successful year, the earnings exceeding those of the previous year, also one of great success, by $212,331. That the new capital had but little share in this large increase is indicated by the fact that the increased dividend charge is only $20,000, representing less than two months' use. The amount available for disposition by the directors was, including the amount brought forward and the premium on new stock, $2,944,807. Of this, the usual 10 per cent. dividend absorbed $1,220,000, and another million was added to rest account, bringing it up to $9,000,000, or about 67½ per cent. of the paid up capital, or over 8¾ per cent. of its liabilities to the public. Perhaps the most interesting showing in the report is the evidence that, notwithstanding the large increase in the resources of the bank, the amount employed outside the country was $3,242,762 less than last year at the same date, the public's demands on the bank's funds showing an increase of no less than $11,504,366. That the rapid expansion of the bank's assets, about 25 per cent. in two years, can indefinitely be continued is not to be expected.

* * *

A feature of the financial situation in New York during the end of May was the heavy exports of gold to foreign countries, the shipments during the third week realizing $1,595,000. The impression developed that this movement was likely to be continuous as well as extensive, but this feeling has of late been considerably checked by the heavy and persistent buying of American stocks for account, a movement consequent on the recent decline in stock market values. The recent reduction in the Bank of England rate from 4 per cent. to 3½ per cent. has also been an influence to curtail the shipments of American gold, to Great Britain at least.

SURRENDER VALUES

WE have repeatedly advised the application of life assurance for investment purposes, and have shown many ways in which exceptionally good results can be obtained; but, especially when used in this way, it becomes of importance to ascertain before making the investment the sum for which it can be realized at any time.

The difference between the results of policies at maturity, either by death or at the expiration of a given term, are very large; but the amount of the surrender value given by different companies varies to an even greater extent.

The subject is one upon which little information is given, and a good deal of calculation and research is required to ascertain precisely what may be expected under any policy. We give below some specimens of the sums assured and the surrender values under policies effected at age 35, subject to the payment of premiums for life at the rate of £100 a year, the sum assured being payable at death whenever it occurs.

	After 5 years.		After 20 years.	
Office.	Sum Assured.	Surrender Value	Sum Assured.	Surrender Value
	£	£	£	£
No. 1	4,038	316	4,317	710
No. 2	3,701	160	3,943	330
Difference	337	176	374	380
No. 3	3,901	316	4,237	741
No. 4	3,852	200	4,101	450
Difference	49	116	136	291
No. 5	3,882	277	4,172	661
No. 6	3,881	200	4,169	400
Difference	0	77	3	261

If we compare the sums assured under policies effected in Offices 1 and 2, we find that the differences are very large; but the proportionate differences between the surrender values are still greater. Of course, no one who was well advised would take a policy in Office No. 2 at all, but it may safely be said that anyone who was foolish enough to do so would pay no attention to the question of the surrender value, and, if at any time he found it necessary to realise his policy, he would be grievously disappointed in the result.

In comparing 3 and 4 the difference between the sums assured is relatively small, but the difference between the surrender values is very large, and points quite distinctly to very illiberal treatment of the policy-holder by Life Office No. 4.

Between 5 and 6 there is practically no difference in the sums assured, but in the surrender values the difference, especially when the policy has been long in force, is very considerable.

Most people on taking a policy contemplate keeping it in force until maturity, but unexpected circumstances frequently arise which make this impossible, and then the question of the amount that can be realized on surrender becomes of great importance. In selecting a policy the average man might think that Office No. 6 was as good as Office No. 5, but on looking into the surrender values it is immediately apparent that No. 5 is superior.—The London Report.

MR L GOLDMAN

L. GOLDMAN, whose photograph appears in this issue, was associated with the late Mr. McCabe in the formation of the North American Life Assurance Company 23 years ago, and on the death of Mr. McCabe, on the 23rd of April last, the board unanimously elected Mr. Goldman to the position of managing director, an appointment to which his marked ability and long and faithful services fully entitled him. Apart from this, Mr. Goldman has spent over 30 years of his life in the insurance business, serving in every department, and is consequently one of the best qualified men in that profession in Canada to fill the position he now occupies. Personally directing the agency department, this special branch has been quite a factor in the company's success, and the splendid work of its representatives is a testimony in itself to the able and liberal manner in which this department has been handled. Kind-hearted, generous and thoughtful as regards the welfare of his employes, Mr. Goldman carries with him the respect and good will of every member of the staff.

L. GOLDMAN, A.I.A., T.C.A.
Managing Director North American Assurance Co.

ANOTHER AMALGAMATION.

The Bank of Montreal has purchased the Exchange Bank of Yarmouth. The shareholders will receive $80 a share, the par value of which is $70. The capital stock of the Exchange Bank is $266,896, paid up. The reserve fund amounts to $50,000. The assets are $752,663 and the total liabilities are $423,033. The sale is subject to ratification by the shareholders.

AMES & CO.'S STATEMENT.

A. E. Ames & Co., the Toronto stock brokers who suspended payment on Tuesday, have issued a statement in which they say they hope to be able to pay all creditors in full, and feel that they will be able to do so if left free from attack, and if, as they feel sasisfied will be the case, the banks and corporations carrying their securities will facilitate matters in their own and the general interests, as well as through such reasonable indulgence as they may be disposed to grant on account of the firm itself, with whom their relations have always heretofore been satisfactory.

"The savings deposits amount to $240,000. The necessity for suspension having been impending before the opening of business yesterday morning, the teller was instructed to put to one side any deposits made during the day. A few of these were made, and will at once be returned.

"Some clients took up their stocks today, and with the forced sales made yesterday, as above referred to, the liabilities are already reduced to, in round figures, about $7,500,000. Clients taking up their stock will need to pay the full amount due us, and, in the cases of such clients as may have their shares margined to a lower point than that at which we can secure the release of their shares from the lenders, they will need to pay the additional amount necessary, remaining, in the meantime, our creditors to that extent. In this way, as in every other way, we will show absolute impartiality as between all creditors, so that there need be no fear that any creditor will have preferential treatment. The plan upon which we are proceeding will result in a speedy simplification of our balance sheet, and will place us within a comparatively short time in a position to make a proposition to our creditors."

NOTES.

The Bank of Hamilton expects to open a branch in Regina very shortly, and new buildings will be erected this summer by the Imperial and Union Banks.

The Imperial Bank are about to open a branch on the corner of Selkirk avenue and Main street, Winnipeg.

The Bank of Ottawa, as also the Bank of Commerce, have opened branches at Regina.

The People's Bank of Halifax have opened a branch at Warwick, P. Q.

F. E. Karn, formerly of the Molson branch, Hensall, has been appointed manager of the branch of the Sovereign Bank, Zurich.

The Bank of British North America has taken possession of its new offices in the Leslie block, Sparks St., Ottawa. At a cost of $10,000 the premises have been transformed, and the architecture and furniture are of the most modern description.

EVOLUTION OF THE FIRE ENGINE.

AN exceedingly interesting paper on the "Progress of Fire Protection" recently read by Mr. P. H. Sims, secretary British American Assurance Company, before the Insurance Institute of Toronto has been received by HARDWARE AND METAL. Mr. Sims not only displays a thorough knowledge of his theme, but has evidently spared no pains or trouble to make this paper of a most complete and valuable nature. Presenting a reliable book of reference, he is certainly to be congratulated on the very readable and entertaining manner in which he has dealt with every phase of his subject. The paper is generously illustrated with cuts showing the evolution of the fire extinguisher, and through the kindness of Mr. Sims we are able to reproduce several of those in our present issue.

We learn from the paper that hand-squirts, as illustrated in Figure No. 1, were first introduced into London in the sixteenth century — although they appear to have been used long antecedent to the Christian era; in fact, on the building of the City of Rome after the great fire of Nero, every citizen was required to keep in his house a bucket, mop, hook or syringe. The manual fire engine appears to have been known both in principle and practice to the ancients, and the fire engine described and illustrated by Nero about 150 B. C. (figure 2) might stand for the ordinary fire engine of the present day. Fire engines appear to have been entirely forgotten during the dark ages and squirts or portable syringes were (except buckets) the only contrivances used for the extinguishing of fires.

It is not known when the fire engine was re-invented, but during the sixteenth and seventeenth centuries frequent reference is made to them by writers of these times. During the first half of the seventeenth century an engine was invented in Germany (figure No. 3). It was mounted on a sled and, when manned by twenty-eight men, was capable of throwing a stream of a diameter of one inch to a height of eighty feet. Engines of this description were introduced into London and three of them used at a fire at London Bridge. It is said of them: "They were such excellent things that nothing that was ever devised could do so much good, yet none of them did prosper."

From this time on there were many inventors at work on fire engines, who brought out improvements, and a style very much used in England at the middle of the eighteenth century was known as "the fore and aft," having the brakes at the end of the engine instead of at the sides, but these and other forms were superseded by the more efficient of Newsham, which was the prototype of the modern hand fire engine.

There are still in existence engines made

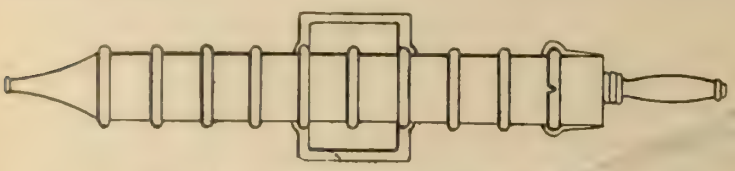

Figure 1.—Syringe from St. Dionis Backchurch.

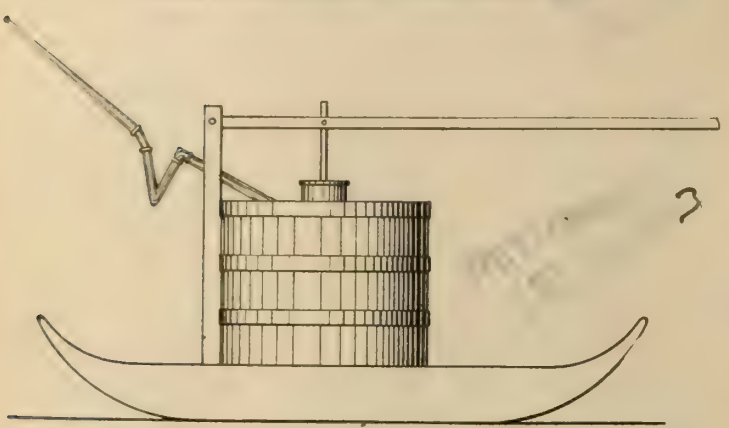

Figure 3.—German Hand Fire Engine, described by Decaus in his "Forcible Movements," published in 1615.

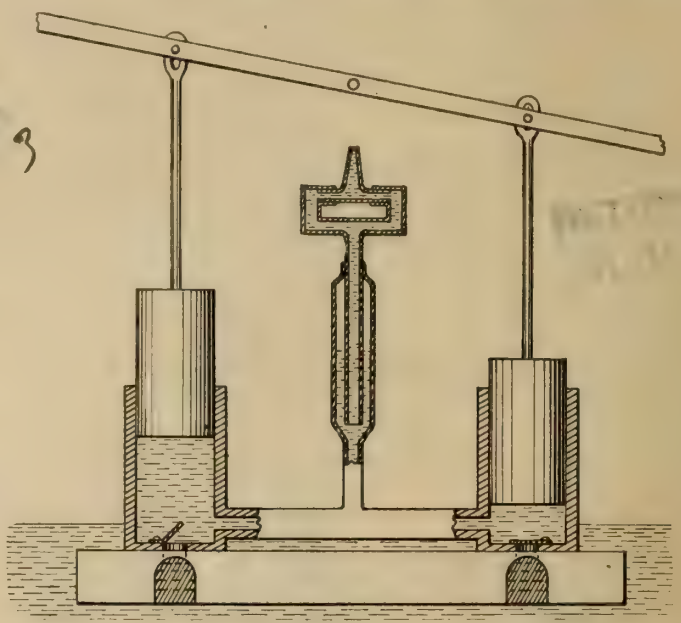

Figure 2.—Nero's Double Cylinder Fire Engine, 2nd Century B. C.

Figure 4.—"The Sham-Rag" Hand Fire Engine, built by Newsham & Rag, of London, England, about 1750.

by Newsham in the early period of his work. It is stated on good authority that the oldest fire engine in the city of Philadelphia, and one of the oldest in America, is a little machine known as the "Sham Rag" (Figure 4), in the possession of Wm. H. Emhardt, president of the Germantown Mutual Fire Insurance Company. It was built by Newsham & Rag, of London, England, and brought to Philadelphia prior to 1764. From 1820 to 1850 a great many firms competed with each other in the manufacture of hand engines, and at the great exhibition of London, 1851, public competitive trials of hand engines were held, the records of which show splendid results, and it is doubtful if such engines could have been improved.

Among the competitors were G. Perry & Bros., of Montreal, who exhibited a manual engine to be worked by 40 men. It was awarded a prize medal, and the exhibits of American machines were probably superior in finish to the European makes. During the decade 1850 to 1860 processes were at work for superseding the hand machine by one more effective, and as the use of steam was coming into vogue in all industries the application of this power was being experimented upon as applied to the fire engine. The first steam fire engine constructed in the United States was designed and built by Paul E. Hodge, of New York, in the year 1840. It was a powerful engine, throwing a one-and-a-half-inch stream 166 feet in height. Apparently Mr. Hodge received but little encouragement, as this was the only one he built, and it was not until ten years later that any substantial progress was made.

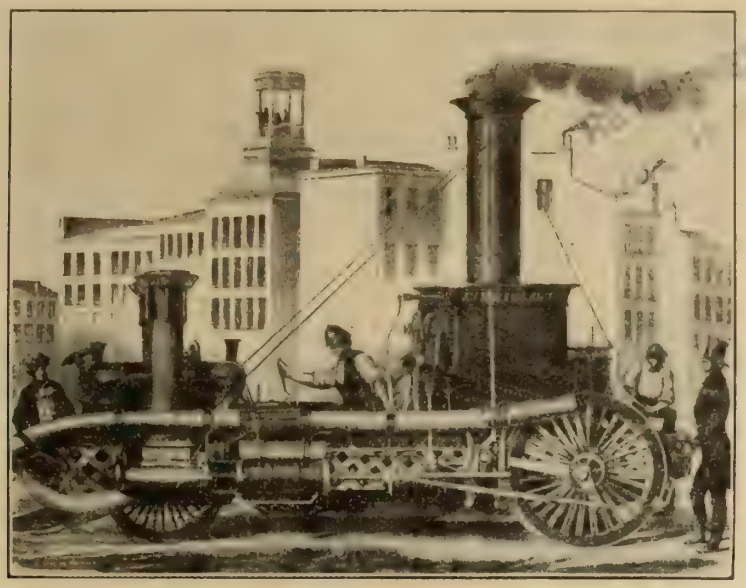

FIGURE 5.—"Uncle Joe Ross," the first Steam Fire Engine, built at Cincinnati by A. B. Latta, in 1853.

In 1853, A. B. Latta, of Cincinnati, began the manufacture of steam fire engines, which presented features of excellence in advance of any machine previously constructed. The machines called steamers at once secured a great reputation for efficiency and speed in getting to work. The first steam fire engine made by Latta, the "Uncle Joe Ross" (Figure 5) is a type of up-to-date fire engines, and established the style of the American fire engine (Figure 6) which is acknowledged to be equal to, if not superior to, any make in the world.

Mr. Sims also gives in his paper lengthy and interesting descriptions of other fire appliances of value, such as aerial trucks, water towers, chemical engines, etc., and we also learn from it that the leather hose for suction and delivery was the invention of Van Der Heule, of Amsterdam, in the year 1672, India rubber hose being first brought out by Thomas Hancock, of Fulham, in the year 1827.

The water-works systems and the greatly improved methods of fire alarms are also gone into very exhaustively, as are also the changes from the volunteer to the paid fire brigade system of to-day.

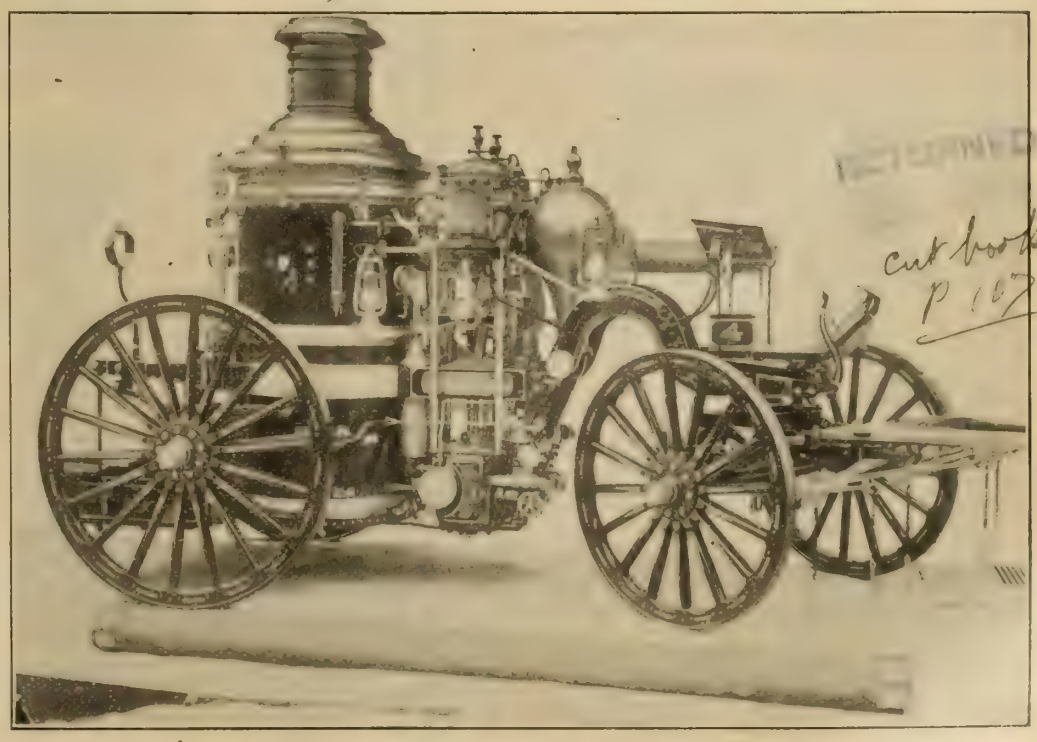

FIGURE 6.—The Modern American Steam Fire Engine, 1903.

We very much regret that want of space

prevents our giving more copious extracts from Mr. Sims' paper, this short review gives but a very bare idea of the contents of a very instructive pamphlet, the matter of which has evidently been compiled with the greatest of care, containing, as it does, much valuable material, the collection of which must have occasioned a vast amount of trouble and research.

BOKER RAZORS IN CANADA.

"IT is just 20 years," said a representative of Dorken Bros. & Co., Montreal, to HARDWARE AND METAL, "since Henry Boker & Co. showed their first razor samples in the Canadian market, At that time hardware dealers here were handling principally Sheffield-made razors.

"When showing Boker razors and quoting a correct price for such goods the German agents were informed that the prices were too high, the Sheffield being much lower in cost. After having tried to induce nearly all the Canadian wholesale merchants to stock these goods, the agents were obliged to place their samples and stock on consignment with a cutler in Montreal in order to have them disposed of.

"The cutler was instructed to sell to barbers only. The result of an examination of the razors by the cutler and barbers was so surprising to all concerned that the barbers tried to find more goods in the different hardware stores in Montreal, and the reputation of the Boker razors was at once established and orders were placed by the trade.

"Up till that time the barbers had been accustomed to heavy razors, and when these full-concaved, light goods were offered them, it was found out at once that they were superior in many ways to the heavier kind, and the sale of the former has steadily grown since that time.

"The first Boker razors offered were sold under the brand name of 'Henry Boker & Co.', but since the brands 'Royal Canadian,' 'Ask for 38' and 'Hindoo' have been added. The latter are the first brands made specially for the Canadian market.

"The first samples of razors with galvanized gold etching in hollow were sold here some 14 or 15 years ago by H. Boker & Co. Since these were introduced this class of razor has come into general use. In fact, a proof of the quality of the 'King Cutter' razor is the fact that the etching on it has been imitated as nearly as the law will allow, the name being a registered trade mark.

"Razors may be had magnetized at the same price as regular goods, but the makers claim that it is better not to have a magnetized razor as such are liable to attract at the edge small particles of metal from the air and from the face, which might hinder in stropping or shaving, while having nothing to do with any improvement in the cutting quality of the goods."

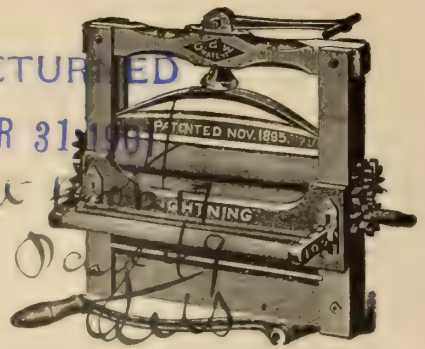
PERSONAL MENTION.

Mr. John Irving, of the Nova Scotia Steel Co., Ltd., New Glasgow, N.S., is in Toronto this week. He is quite optimistic in regard to business. "While the market," he said, "looks rather light in the United States, the appearances are for a continued good trade in manufactured goods, for the low price of pig iron is not likely to affect finished products." We have enough work to cover us for the next three months at any rate. Mr. Irving goes east on Sunday.

Mr. Alfred H. Brittain, representing Walter Grose, Montreal, has left on a business trip to the Maritime Provinces.

MADE IN CANADA.

The Maple Leaf Brand



"THE LIGHTNING."

The simplest and most effective Wringer on the market.

By simply turning over the lever on top-bar, the Wringer is fastened securely to the tub, and the pressure is put upon the rolls.

When taken from the tub, the pressure on the rolls is instantly released.

Pressure can be adjusted in a minute from 1 to 100 lbs.

Has a self-locking drop-table with malleable iron sides. Does away with all wire attachments.

Rolls are of solid rubber, vulcanized to shaft, guaranteed not to come loose.

STOVES AND TINWARE

CHIMNEYS FOR GAS STOVES.

THE remarkable increase in the use of gas stoves for cooking and heating purposes has at last aroused the attention of some architects and builders, as well as of stove manufacturers and dealers. Even though the same principles seem to be in use with gas stoves as are at hand in coal stoves, practice has shown that difficulties often arise after the gases of combustion reach the chimney, writes Chas. F. Hauss, in an exchange. The fault lies principally in the chimney, which is usually built for a coal stove, and hence is larger than is necessary for a gas stove, as the latter does not deliver enough heated gas into the large chimney to properly fill and warm it so as to cause the necessary difference in density of the air to create the draft. Naturally, much heat is lost to overcome this difficulty, which, with a properly proportioned chimney, would have been of service in heating the room.

It is often the case where several coal stoves or ranges are connected to one single flue, that at times, one or more of the stoves are not under fire. But enough heat is always furnished to the flue to create a draft, and, incidentally, to overcome the cooling effects of the cold air entering the chimney from the stoves not in use.

Naturally, where there is economical use of the fuel, as is the case with steam or hot water heaters, where the gases of combustion reach the chimney at a comparatively low temperature, more than one connection to the chimney is not desired or permitted. This is especially true in case with gas stoves in which the heat is nearly all used in the room for heating or cooking purposes, and where no draft is necessary to create combustion. Here the chimney is only necessary to carry off the noxious gases from the burning gas.

Even though theoretically this lower temperature in the chimney flue offers no objections it is one criticism a fact that, in practice, as soon as a well constructed gas stove is attached to a chimney to which no other stoves, especially coal stoves, are connected, it is found that the chimney is always wet, often to the extent of moistening the walls, or even to having the water run out of the bottom of the chimney; the products of combustion from a gas stove, like those from a coal fire, making large quantities of vapor which can only be carried out of the chimney if the gases are warm enough to absorb this moisture. When, however, a gas stove is connected to an ordinary large flue having other openings admitting cold air, this moisture or vapor is condensed and shows itself by wetting the walls, as mentioned above.

To avoid all this it will be necessary to have a separate small flue for each gas stove. In view of the fact that a very small amount of soot is deposited in a flue of this kind, it can be made without special care for ease of cleaning, and owing to the practical absence of heat, the walls can be thinner, so as to avoid the unsightly chimney breast in the room.

These flues can be made round, square or oblong, a hole four inches in diameter being a fair size. A flue formed of cement makes a good one in every respect.

HAMILTON FOUNDRYMEN AGREE.

The difficulties between the foundrymen of Hamilton and their moulders has been settled. As a result of the late negotiations, a scale of wages has been arranged that is satisfactory to all concerned, and an agreement has been entered into that will last until April 1 next year. The men asked for a raise from $2.50 to $2.75 for day work, and an increase of 10 per cent. for piece-workers. The new scale is in the nature of a compromise, the day hands getting $2.65 and the piecework ers a raise of 5 per cent.

THE FALL STOVE TRADE.

It is not too early for hardware dealers to start planning for the'r fall stove and furnace trade. To some dealers this trade is one requiring little thought or judgment, but others have found that it well repays in increased returns all time and attention devoted to it.

One stove merchant's experience is well worth recording. Until two years ago he made a point of waiting for trade to come to him, but as a result of a suggestion made in "Hardware and Metal" at that time, he decided to see if he could get more trade by going after it. He began by visiting two residents of his town who were building new houses, finding out whether they intended to instal furnaces or not. In one case he found that the order for a furnace had been given; in the other case the builder intended to use his stove (which he had had for about ten years), but after considerable persuasion he was induced to put in a furnace, and the dealer got the order.

This he considered good results for the work done, so he thereupon started in to induce other people to instal furnaces. He found that in several cases where he failed in selling a furnace he secured an order for a range. The result was that during the first year of this enterprise his stove business was increased nearly 50 per cent. But, at the beginning of last season, his most energetic rival had "caught on" to his methods and was adopting similar tactics. Naturally, he expected the competition might lead to cut prices, so, after thinking over the matter for some days, he went over to the other dealer, asking him to keep up prices and promising to do the same. The latter did not promise to do so, but agreed not to lower them if he got a fair share of the business. So the two of them started in with friendly relations to get as much new business as they could. Neither found it necessary or wise to cut prices, and when the season ended, they both found their sales much larger than ever had been the case before. A study of the situation showed them that their increase had come, not so much from competitors' business as from larger purchases of stoves and furnaces as a result of the persuasion brought to bear on the buyers. It was also noticed that owing to the good advertising done, their sales had extended over a wider area than formerly; buyers had come to their stores from a greater distance than had previously been the case.

CANADIAN HEATERS FOR CHINA.

The third shipment of Moore's hot blast air-tight heaters has just been made by The D. Moore Company, Limited, of Hamilton, to China. This shipment was made via New York, per ss. Shimosa, sailing on June 2 for Shanghai.

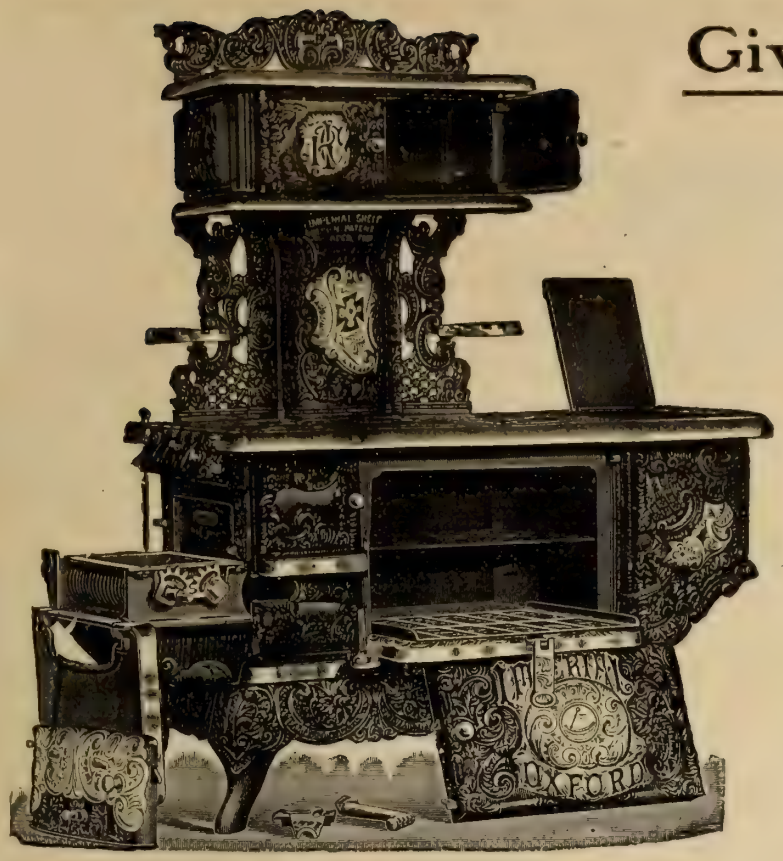
The popularity of these heaters for burning all kinds of fuel is greatly increasing. Last year this firm were unable to fill their orders, and to avoid disappointments to customers this season, The D. Moore Company are already piling up a heavy stock of these goods in order to supply the demand.

ERECTING NEW WORKS.

Work has been commenced on the new warehouse to be erected at the Western Foundry Co.'s works. The new structure will be 60 x 150 ft. When the work on this building is completed work will be commenced on the new moulding shop. The Western Foundry Co. is turning out a splendid line of stoves and ranges which have met with public favor and the company is crowded with orders. The Western Foundry Co. is one of Wingham's most important industries.—Wingham, Ont., Times.

STOVE AND FURNACE CATALOGUES

"Hardware and Metal" would like to receive from manufacturers of stoves, ranges, furnaces, etc., any catalogues or other literature they are preparing for the trade. Any such received will be given a notice in subsequent issues of the paper.



Give Your Customers the Best.

There are no two ways about it. If you want to do a successful business you must supply dependable goods. The

Imperial Oxford Range

in the judgment of cooks of wide experience fulfils every requirement in the best manner. There are good talking points about the Imperial Oxford which no other stove contains. You can sell it easier than any other range and with greater satisfaction to the purchaser.

THE MOTE AND THE BEAM.

A GENTLEMAN from Johannesburg, South Africa, was interviewed by a Montreal newspaper the other day, after pointing out to the reporter how little we were taking advantage of the opportunities offered in South Africa for a market for our products, and also how little we appreciated our rivers and forests and all the other natural Canadian features that we have been conceited about for years, wound up the interview with the old statement that there was not enough known about the different parts of the Empire. No doubt thinking he was giving a good example of our ignorance of each other, he said: "Many South Africans vaguely imagine that Canada is part of the United States."

The gentleman, be it remembered, was not speaking of the colored natives in his balmy country.

We have heard of letters from Great Britain and the other colonies being addressed to "Montreal, U. S. A.," or "Toronto, Ont., U.S.A." and "Quebec, N.Y., U.S.A.," but as a rule even the uneducated people in the British Isles know now that Canada is not a suburb of Chicago. Those that don't know it are not worth bothering about as customers, and the same applies to the hazy South Africans. Yet the gentleman quoted above says that our products on his home market would be given the preference over American products; in fact, that should we enter South Africa in competition with the United States, that he would "do for" the children of Uncle Sam on that market, notwithstanding that "many" South Africans don't know the difference between us.

It is to be hoped that some of those Canadian school teachers will drift southward and open up some geography classes in Natal and Cape Colony. After that our exporters may have a chance of getting a preference.

It is not likely, however, that the South-African gentleman meant all he said. How many visitors do we know from both Great Britain and our sister colonies who do their best to patronize us when they kind here? Should we become too enthusiastic about this country their favorite wet blanket is the pleasant announcement that their countrymen, as a rule, do not know where we are on the map, or at least believe that we are part of the United States or a populous Greenland settlement. This may put a damper on us for the moment, but what are we to think of our fellow British subjects?

Before the Boer war we knew that Cape Colony was not Oom Paul's constituency, that New Zealand was not the capital of Australia and that British Guiana was not one of the West India Islands. These places are all of less geographical importance and other kinds of importance than Canada, and it would be no more absurd for "many" Canadians to believe in that jumble in geography than for South Africans or Australians or Jamaicans or the others to suppose that Canada is one of the American States. Yet visitor after visitor from our sister colonies, after telling us in one breath how much his people love us, feels compelled to add in the next that it's too bad they do not know where we live or what flag we fly. It is time the farce ended.

INQUIRIES ABOUT CANADIAN GOODS.

The following were among the recent inquiries relating to Canadian trade received at the Canadian Government office in London;

1. A wholesale seed firm requiring large supplies of wooden boxes, cut to specified sizes, have asked to be placed in touch with Canadian shippers of box shooks.

2. A London firm of agents and brokers for the sale of provisions asks to be furnished with the names of packers of lobsters in the Maritime Provinces of Canada.

3. The addresses of casein manufacturers in Canada are asked for by a firm in Scotland.

4. An import and export house at Malmo, Sweden, has asked to be furnished with a list of leading Canadian shippers of wheat, flour, fruit, cheese and salmon.

5. A London firm asks to be put in communication with Canadian producers of raspberry and of black currant pulps.

6. A Birmingham house wishes to hear from Canadian manufacturers of ash shovel handles.

7. An inquiry has been received for the addresses of Canadian producers of Kieselguhr (Tripolite).

8. An application has been made for the names of Canadian importers of hair cloth for tailoring purposes.

The names of the firms making the above inquiries can be obtained from the editor of HARDWARE AND METAL.

A GOOD FRUIT SLICER.

H. S. Howland, Sons & Co., Limited, Toronto, are offering to the trade a slicer suitable for cutting to any thickness all kinds of vegetables and fruit, an excellent

slicer for making marmalade. It is well made, having tempered steel blades, well protected, and is easily taken apart for cleaning.

Common galvanized iron

has all the faults there are;

the worst one is its varying.

Apollo is uniform.

is the thing. No line will give you better satisfaction.

CURRENT MARKET QUOTATIONS.

June 5, 1903.

These prices are for such, qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors n this list, as the desire is to make it perfectly accurate.

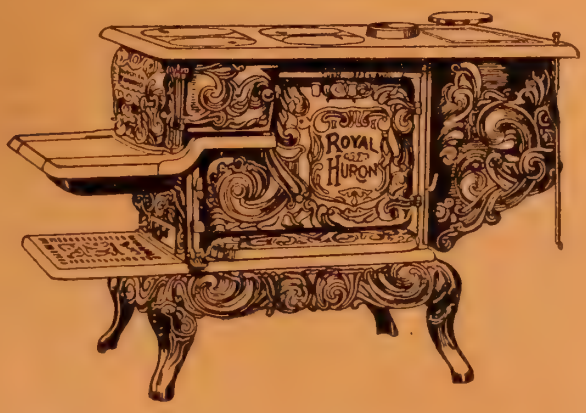
"QUALITY FIRST AND ALWAYS."



DON'T CLOSE YOUR EARS...

to our arguments for HURON Stoves and Ranges.

Leading dealers everywhere acknowledge frankly that we have in the HURON the most modern, profitable and best-finished line that is on the market.

Why, then, continue to handle lines that are continually advancing and which you are unable to sell at a fair profit?

We are specialists in the stove business and our goods and prices are right.

Why Dunlop?

Yes, some merchants have wondered why so many of their customers insist on the Dunlop Trade Mark on their bicycle tires, lawn hose, rubber heels, pneumatic and solid rubber carriage tires, rubber mats, etc. There is just one reason for it. They want the very best and they know they get it in

Dunlop Quality.

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, JUNE 13, 1903. NO. 24.

Subjects Being Discussed at Ottawa

Written for Hardware and Metal by a Member of Parliament.

A COUNTRY newspaper has recently been publishing the views of an eminent gentleman who spent the whole of two hours in the Commons' gallery, and was simply shocked at what his eyes beheld from that point of vantage. Slim attendance to start with, and, on the part of those actually present, indifferent attention, ranging all the way from listless interest, through reading of newspapers and writing of letters, to—Oh horror of horrors—peaceful slumber! This great statesman (in futuro) at once jumps to the conclusion that things have gone to the dogs at Ottawa, and that a radical change in the personnel, doubtless by the introduction of himself and others of his ilk, is absolutely necessary, if Canada is to be saved.

* * *

Strange as it may seem, there is, however, another side to the case, and the gallery wiseacre cannot be allowed to hold the fort unassailed. The House sat till 2.30 this morning (Wednesday, June 3). Committees were in full swing again at 10.30 a.m. till 1 p.m., again at 2.30 thereafter, until 5.15, by special leave of the House, without which no committee can lawfully sit while it is in session, while the House itself has been sitting from 3 to 6 p.m., and will sit to-night from 8 to midnight at the least, and possibly a good deal later. Does the average fair-minded man think that with such a programme as this it is to be wondered at if some of the members take a quiet nap at their desks while a matter of small importance is under discussion at the hands of a man who is possibly one of the champion bores of the House, or that attendance is somewhat slim when committees are sitting concurrently with the House; for even members of Parliament have not yet been able to solve the problem of being in two places at once. Add to the duties above enumerated a visit or two to the Departments on business connected with one's constituency, and the writing of from 15 to 20 letters a day—that would be about a fair average of an ordinary member—and it may be admitted that the sage whose strictures we have been examining is not altogether fair when he holds up the members as shirkers and careless representatives.

The work of one of the committees to which we have been referring has to-day been in connection with Bill No. 48, the object of which is to make compulsory the inspection of skins and hides. A large number of gentlemen connected with the butchering, hide and tanning industries were present, and a hot fight took place between the rival interests, as a result of which it seems likely that the inspection so far as it was to have affected calf skins will be abandoned. There was a general consensus of opinion that the present act, under which we have voluntary inspection, was very satisfactorily worked in the City of Montreal, but the credit for this was due almost entirely to a united effort on the part of the dealers, by which a fair and excellent inspection was had. It was stated by one of those present that whereas under old conditions about 75 per cent of the hides graded second and but 25 per cent. first, under the new regulations 80 per cent. graded first and but 20 per cent. second. The change was made in the better skinning secured by the imposition of certain penalties, which had practically eliminated cuts in the hides and other defects.

* * *

Those in favor of the bill argued strongly that its passage would bring up the standard all round to that of Montreal, with a like change in percentage between firsts and seconds. Let us see what this would mean to the trade in Canada as a whole. Suppose we take off 1,200,000 hides per annum, which is very near the mark. With 75 per cent. seconds we would have 900,000 of that quality and 300,000 firsts. Change the ratio to 80 per cent. first and we would get 960,000 firsts and but 240,000 seconds, or a gain of 660,000 to the better quality. As the difference in price between a first and second-class hide will average about 50c., we would increase the value of the product no less than $330,000 to the farmers (the producers) of Canada. . . While we are very far from saying that these figures are accurate, still we feel bound to assume that if compulsory inspection will result in more careful skinning, a large amount at least will be added to the revenue of the country, which, at present, is simply thrown away.

* * *

The Bill proposes to have the compulsory inspection apply only to the large centres of the trade, and the cities of Quebec, Montreal, Ottawa, Kingston, Toronto, Hamilton and London, but, after argument, it was decided to amend the section to make it apply to all centres which had a weekly trade of 300 hides. The main opposition to the measure seems to be on the part of those who sell largely for export to the United States. These maintain that the Americans insist on doing their own inspection at any rate, and that in consequence, they will be out just the amount of the Canadian inspection fees—no very small amount. It is possible that to meet this objection an amendment may be framed which will enable hides bought for export to be exempt from the operation of the act. But in this the difficulty lies in the

fact that it is impossible for the buyer of the hides to say when he is purchasing from what their destination, whether home or foreign, will be.

* * *

Of course it is a part of the regulation that hides inspected under the act will be classified and marked. This brings up the question: What of those hides sold in places too small to have an inspector? These will naturally be at a disadvantage in competition with those bearing the Government mark, which will soon get a trade reputation that will give them a standing in the market, whereas the hides from the small centres without this mark will have to be sold at a flat price. The buyer will have to assume a certain amount of risk in making his purchase, and as in all such cases, he will take pretty good care not to get the worst of the guessing game, while the good hides will fetch no more than the bad. It is all very well for the rain to fall alike upon the just and the unjust, but in matters commercial, quality should count for something. This was pointed out by a member of one of the rural constituencies, who, alive to the interests of his people, saw the danger and prepared to meet it. As a result, it was decided that while the hides from the small places could not from the very nature of the case be brought under the compulsory section of the act, they might still be accorded Government inspection on their shipment to the inspecting points. This will no doubt obviate the difficulty, and save the country dealer from the loss which hap-hazard dealing always entails.

* * *

The question of strikes came very near home to us in parliamentary circles, when recently the employes of the Printing Bureau, nearly 500 in number, threatened to go out unless their demands for increased pay were acceded to. This seems to be the period of labor run mad, for disinterested individuals are forced to admit that in many cases of to-day the men are as tyrannical and unreasonable in their demands as they claim capitalists have been in the past. This trouble in the Bureau is a striking example of kicking rather because the employes have "waxed fat," than because they had any real reason for doing so. The time, no doubt, seemed opportune to the men, who were not above applying the old maxim: "Thy necessity is my opportunity." The amount of printing which has to be done while the House is in session is immense, and much of it is of so urgent a character that to leave it undone would almost suspend business.

* * *

Now, in the matter of hours, pay and holidays, the Government employes were highly favored, in pay, receiving more than their brethren of either Toronto or Montreal, but the office was under control of the unions, and these seemed anxious to stir up trouble. Naturally, for the reason given, and quite possibly, for political reasons, too, the Government was most anxious to avoid the threatened strike, and compromise was resorted to, but in vain. The printers finally made up their minds to go out unless they got all of their demands satisfied, and the Government, driven desperate, turned the tables with amazing suddenness by locking the men out, and refusing to allow them to return to work unless on the Government terms. This heroic measure had a wonderfully rapid result, and to-day things are going along all right on the old basis, with the Government a Government in more than mere name. One excellent result of the little encounter is that hereafter instead of being a union office the Bureau will be an "open" one, and any honest and capable man will be eligible for employment there regardless of his trade associations. Thus we see that action founded in unreason often brings about the complete overthrow of its advocates, and leaves them in a position worse than that complained of. We do not wish to glory over the repulse of these men because they were "union," for we recognize that unions have a useful and necessary place in the economic conditions of our country, but we do rejoice in the defeat of tyranny, whether that tyranny comes from labor union or capitalist, and, unfortunately, cases of both are far from rare.

* * *

Senator Lougheed has certainly taken the bull by the horns in his bill lettered "H," recently under consideration in the Senate. He proposes to amend the Criminal Code by enacting as follows: "Everyone is guilty of an indictable offence and liable to two years imprisonment who, being a person not a British subject, whether residing in or out of Canada, does in Canada, incite, urge or induce workmen, by any act or means whatsoever, to quit any employment in which they are engaged, or to enter upon any strike with the object of enforcing additional wages or terms of employment from their employer." A large number of gentlemen turned up before the committee on the morning of June 4, representing interests affected by the proposed bill, and some heated argument resulted.

* * *

On the part of the international union it was maintained that while capitalists were free to unite in various undertakings, the capitalists being partly British and partly foreign subjects, a similar privilege should in justice be allowed the men. The assertion was made that no international union could order a strike—this was decided on by the local union, which had then to obtain leave from the international union. No dictation had ever been attempted by the larger organization, which had, on the contrary, had a very beneficial result on labor problems on both sides of the line. Mr. Ritchie, in arguing the case for the supporters of the bill, said that it was aimed at the walking delegate, who crossed the line to create mischief as a proof that he was an active fellow and earning his salary. He instanced the case of McLaughlin Brothers, of Ottawa, as one in which the objectionable and zealous foreigner had stirred up trouble that would never have arisen but for his presence. Surely, as the unions had pressed for legislation preventing manufacturers from importing alien labor, the present bill was not inconsistent, but strictly in line with their course of action. Again, it might be in the interests of manufacturers across the line to stir up industrial trouble in Canada, and in the clever and unscrupulous walking delegate he found a ready means. He pointed out clearly that the bill did not touch the case of a man who came to conciliate, only the firebrand was mentioned or aimed at.

"UNREASONABLE" MANUFACTURERS

"WHAT unreasonable persons the manufacturing classes are!" growled the handsomely dressed labor leader, blowing a cloud of smoke to the ceiling from his fragrant Havana, as he tilted his chair back in his sumptuously furnished office at the Labor Union Headquarters one morning in the spring of 1920.

"I see by the morning papers that the Manufacturers' Organization claims that the different manufacturers in the United States are receiving so little work now in return for the wages they are paying their employes that they are not able to properly support themselves and their families, owing to the greatly increased cost of living of late, and they threaten to strike."

'So I have noticed," testily exclaimed the Secretary of the Labor Union. "While I believe that an employer is worthy of receiving service in return for his money I have no sympathy for them

in this instance. Why, our men are working six hours a day for them. What do they expect for their money? I hold that any sober, industrious manufacturing man should be able to support his family comfortably on the service our men are rendering them. Of course, we don't expect them to be able to own yachts and automobiles such as we wealthy laboring men have, or to live in Fifth Avenue mansions such as ours, but they should be able to get along respectably—and what more should they want?"

"My opinion exactly! They don't seem to know when they are well off. They are making a great kick at our forcing them to purchase only raw materials that have the Union label on them, claiming that they can buy the same materials much cheaper from independent producers."

"What ingratitude!"

"Yes; and they even go so far as to assert that we are making it so expensive for them to manufacture things that the market is being flooded with cheap, common foreign manufactured articles that they only see ruin and bankruptcy staring them in the face. There is to be an Unemployed Capitalists' Parade tomorrow of employers who own manufacturing plants that are shut down."

"Poppycock! We have got their walking delegates and capital agitators to thank for all this," exclaimed the Secretary, savagely. "Men who never so much as manufactured a single article or managed a coal mine a day in their lives go about exciting discontent among the guileless manufacturers and capitalists. You would think that an intelligent manufacturing man would see through their talk, but he doesn't."

"Let's see, what do they demand?" asked the Labor Leader anxiously. "I was so disgusted when I saw the heading 'The Manufacturers' Organization to Strike' in the morning paper that I couldn't read the article intelligently."

"First and foremost," responded the Labor Secretary, "they demand that the laboring men do 10 per cent. more work a day; second, that they be allowed to purchase raw manufacturing materials wherever they choose; third, that a day's pay shall consist of only $11, instead of $13.75, as now; and fourth, that the laboring men shall work only for the Manufacturers' Organization manufactories."

"Preposterous!"

"Certainly! They would take away a Union laboring man's inalienable right to work for whatever mine or manufacturing company he pleases! What is this free country of ours coming to, I should like to know!"—N. Y. Times.

Working Together.

Next to the recognized high quality of ***The Sherwin-Williams Paints and The Sherwin-Williams Varnishes,*** the principal reason why S.-W.P. agents are more successful than other paint dealers is the way we work with them.

To get a good agent is only half our aim, the other half is to help him build up his paint business. We work with all our agents from the very moment they place our goods on their shelves. We believe that it is an essential part of our duty to help keep our products moving off the agents' shelves. It is by practising that belief that we have been able to build up the largest paint and varnish business in the world.

Our booklet "B—13" describes fully the way we shall work with you if you will take the agency for our products. Write for copy to-day.

NEW ZEALAND AND THE PREFERENCE.

Press despatches from Wellington, New Zealand, say that Premier Seddon, of New Zealand, has declared that the only way by which Great Britain could break down the fiscal barriers against her commerce would be by a preferential tariff between the colonies and the Mother Country. At the next session the Parliament of New Zealand would, he stated, be asked to ratify an agreement made at the conference at London between the colonial premiers and Colonial Secretary Chamberlain, on the lines of the preference given by Canada.

Premier Seddon concluded his statement by declaring that if the Mother Country scouted the proposed preferences the colonies would soon make reciprocity treaties with other countries. In other words, Premier Seddon threatens that unless the United Kingdom helps forward the movement for closer commercial relations within the Empire she will soon see the colonies giving preferences to foreign nations which she will not herself enjoy.

INQUIRIES ABOUT CANADIAN GOODS.

The following were among the recent inquiries relating to Canadian trade received at the Canadian Government office in London:

1. A West of England manufacturer of chair webs and twines, saddlery webs and twines, has made inquiry with a view to increasing his Canadian connection.

2. A Liverpool firm desires to hear from Canadian manufacturers who require active representation in Great Britain and West Africa, where they have important connections.

3. A Bristol produce broker wishes to get into touch with responsible Canadian shippers of bacon,

butter and cheese, who require representation in his district.

4. A correspondent in Staffordshire has asked to be placed in communication with producers of felspar and gypsum in Canada.

5. A London importer wishes to correspond direct with large producers in Canada of flour, mealies, oats, wheat, barley and lumber.

POWDER FACTORY BURNED.

A. L. Howard & Co.'s powder factory at Capelton, Que., was destroyed by fire on Wednesday night, June 3. The cause of the fire is unknown. Fortunately there were no explosions in the building as the work of manufacturing had been finished for the season, but the loss on the building is reported to have been heavy.

MEN AFRAID TO TALK.

The man who tells everything he knows has no business in business. He makes trouble for himself and for every person with whom he comes in business contact. On the other hand, just as great a nuisance is the foxy, suspicious, narrow-minded, close-mouthed individual who is afraid to talk business for fear he will give away to his competitors some trick of the trade. Men who are engaged in the same line of business, although in sharp competition, still have much in common and many mutual interests. They need not necessarily pool their interests or form a trust, but the more successful ones are always those who are broad enough in their business policy and liberal enough in their attitude of mind to co-operate with their fellows when the opportunity presents itself.—Agricultural Advertising.

"COMET" BRAND SHEETS.

Attention is called to the advertisement of W. Gilbertson & Co., Limited, of their "Comet" brand galvanized sheets and galvanized Canada plates. This brand has been on the market for several years now, and the Canadian agent states that the sales are increasing every year, and that there are more of their galvanized Canadian plates brought into this market than any other make.

ALUMINUM AS AN ABRASIVE.

It has been discovered in Germany that aluminum is valuable in sharpening cutlery. The metal apparently has the structure of a fine stone and possesses a good dissolving power. It moreover develops during the whetting process an exceedingly fine metal setting substance, greasy to touch, while showing strong adhesion for steel. The knives in a short time obtain such a razor like edge that it is said that even the best whetstone cannot compete with the result.

GERMANY AND CANADA.

The following is a contribution which The Montreal Herald gives on the present trade situation between Canada and Germany.

KAISER VS. CANADA.

Some deep and earnest thinking is
The Kaiser doing now,
He'll gladly jump on Canada
And raise another row,
He'll also raise the tariff up
As quick as he knows how.

The apples that we sent him once
He'll slam into the sea,
A tax of 99 per cent.
Is just the thing that he
Will put on wheat and barley and
The product of the bee.

Our corn and oats are other things
That hit his royal eye,
He'll raise the tax on them all right,
And also cheese and rye,
Der Kaiser 'll put a tax on them
Or know the reason why.

His Royal Jinks is mad, all right,
And mad enough to burst,
At thoughts of us he frets and fumes,
But that is not the worst,
He's mad to think we're overjoyed
That we have hit him first.

MACHINERY

MACHINE SHOPS FOR OWEN SOUND.

EXCAVATIONS for the work on the new buildings of The Owen Sound Iron Works Co., Limited, commenced last week, when Contractor James Beeton set a gang of men to work. The main building will be 337 feet long. The front of the building will be twenty feet high, with two storeys at each side of the monitor roof, for offices and pattern room. This section will extend back twenty-eight feet, when the stone walls will drop to a height of eight feet, with sloping roof and monitor roof extending through to Water street, where the moulding shop will be located. South of the main building, facing Marsh street, will be the boiler shop, thirty-four feet by forty-nine feet. Beside the east end of the building the box shed, thirty-one feet by seventy-two feet, will face Water street. The pattern storage will be well back from the street. It will be two storeys high with a ground dimension fifty-two feet by thirty-four feet. Adjoining it will be the pattern shop, with a floor space of thirty-five feet by twenty feet. Numerous windows will give the building a striking appearance. The lighting is so perfect that there will be one square foot of glass for every two and a half feet of floor space. The company will install its own electric light plant for night work. New shafting and new power will be installed, so that the change from the old shops may be made with the slightest possible delay. The shops will be ready for business about the first of September.

HARDWAREMEN AND MANUFACTURERS.

HARDWARE AND METAL has been a persistent exponent of the advantage the retailer may derive from taking a broad view of his legitimate field of action. The departmental store idea is permeating even the smaller towns. Every extra sideline which can be brought under the most general term of hardware will help to sell staple articles. A customer dropping in to get an estimate on a plumbing contract is not unlikely to leave his order for shelf hardware and the same is true in the case of other lines at one time not considered strictly hardware. Opportunities for profitable ventures in manufacturing specialties are also of more or less frequent occurrence. The retailer is in the position to know the requirements of the trade and may often devise some simple article which, if properly handled, may prove a capital money getter. Cleland Bros. & Co., of Meaford, Ont., are an example of what may be done in this way even in one of the smaller towns. To the regular hardware lines, including plumbing, they have added a line of carriages, which are stored on an upper storey. They have also engaged in manufacturing. A very complete little factory equipped with moulding, carpenter and paint shops employs from 25 to 30 men turning out wheelbarrows for all uses, also patent wash tubs. The firm make all their own parts except steel trays for metal barrows, and appear to be doing a thriving business.

ALCOHOLIC AND KEROSENE MOTORS IN PERU.

An exposition of alcoholic appliances for industrial purposes has just been concluded at Lima, Peru. The purpose of the exposition was to encourage the industrial use of alcohol with a view to revive the sugar cane industry which has been depressed by the low price of cane sugar. The German exhibit was the most extensive and included various styles of motors for driving agricultural machines and light portable railways. England and United States exhibited kerosene motors and France alcohol lamps. The exposition is likely to create an important demand for alcohol and kerosene motors. It is understood, however, that the low price of kerosene in Peru makes the kerosene motor much the more economical.

A PRACTICAL BELT TEST.

AN engineer's life is a continual exercise of judgment. He meets every day problems that neither books nor previous condition of servitude will solve for him, writes F. L. Johnson in Power. If he makes an error in judgment, the error must be on the safe side. In a plant running very near its limit, where the failure of a belt or a condenser or the temporary disablement of an engine means a reduction of output, he must be continually alert. In a plant of this kind every engine, pump, belt, shaft and pulley should be thoroughly inspected by a competent engineer as soon as shut down. The certainty that a line of machinery is ready for duty when needed will take lots of care from an engineer's mind.

A belt shows signs of fatigue. What shall be done? Here is a case: "A 54-inch double belt cracks in one or two places. It travels about 5,000 feet per minute. The formulae say this belt should transmit, when new, about 700 horse-power. But it has carried over that amount for more than ten years, and is to be displaced by a direct-connected engine in about two years. Will it with judicious and timely repairs last two years and still transmit 700 horse-power? The engineer must decide. A new belt will certainly cost $1,500, while repairs, whether successful or not, may cost $300 for the two years. If the engineer so decides, the management will purchase a new belt, which the engineer knows will last. But can he save the corporation an expenditure of $1,500 by using the old belt and taking chances? Can he afford to take chances? The engineer, as a rule, is not hired to take chances; he is expected to know what will do and what will not do. The doctor and the street paver can take chances; the earth will cover their mistakes. But an engineer's mistakes become a part of the history of his plant and of his life.

With this in mind, what will he do about the belt? He makes a new lap where the crack occurs and carefully examines the piece cut out. He selects a strip an inch wide and about a foot long from the poorest part of it and with a pair of belt clamps fastened to either end of the strip he proceeds to pull it in two.

The first weights are watched with the intensest interest as they are applied, as more and more weight is added, and when he sees that this piece of leather, the poorest in the belt, a piece 1 inch wide and ⅛ inch thick, will sustain 200 pounds, he feels better. At 225 it begins to stretch perceptibly; 25 pounds more are added and the strip still holds. The strip has

narrows to ¾ inch in width at one point, and still holds up the 250 pounds. The test ceases here, because the scale pan would in this case let a nail bag, will hold no more scrap iron.

The test is crude, but the engineer has found out that one-eighth of one square inch of this belt will safely stand a pull of 200 pounds. The leather shows a tensile strength of about 1,600 pounds per square inch. The thinnest part of the belt is found to be ⅓ inch, and he decides that it will stand a pull of over 500 pounds for each inch of width. He is satisfied that the belt is safe for some little time yet.

PATENT ON CAST IRON ALLOYS.

A PATENT has been taken out by George Grunauer, of Berlin, Germany, on the manufacture of cast iron alloys. The invention relates to processes of producing an alloy of cast iron and nickel, and has for its object a product of greater strength and malleability than ordinary cast iron. As is well known, cast iron possesses only in a very small degree the property of being wrought. Its elasticity is comparatively small, and, as compared with wrought iron, cast iron is very brittle and of less tensile strength. To obviate these disadvantages this invention consists, essentially, of adding nickel to the melted cast iron as it leaves the cupola. An alloy is produced which is claimed to resemble wrought iron in its properties much more closely than ordinary cast iron. The addition may be made in various ways. Thus solid nickel may be placed in the ladle and the liquid cast iron poured upon it, or nickel and cast iron, both in a liquid state, may be run together. One-half to forty per cent. of nickel may be mixed with remelted cast iron as it flows from the cupola furnace, and an alloy thus obtained is said to readily admit of being worked, suffers much less from oxidation and takes a higher polish than cast iron. The inventor says that the fluidity is also considerably increased by the addition of nickel to the iron, and as the addition of nickel greatly improves the quality of the iron, the employment of low-grade pig iron and scrap is rendered possible. Thus the practical importance of such an alloy is obvious.

The improved product having greater strength, castings may be reduced in size, not only reducing the cost but also reducing the weight.

MACHINERY NOTES.

O. OBERMEYER, of Stuttgart (Silberburgstrasse, 125), Wurtemberg, Germany, is desirous of obtaining the names of manufacturers of all kinds of tools for saddlers, tanners, carpenters, coopers, cabinet-makers, turners and butchers, as also of manufacturers of drills for wood and iron material, saws, edge tools, etc.

Fletcher & Ross, Sherbrooke, Que., will erect a plant and engine for the manufacture of pulp wood provided the City Council will grant the necessary permission.

J. D. Irving, Buctouche, N.B., has made material improvements to his flouring mill and erected a carding mill adjoining the grist mill.

The Truro Foundry and Machine Co., Truro, N.S., will ship in a few days to The Royal Oak Mining Co., Goldenville, an engine and other machinery, now being manufactured.

The County Buildings and Property Committee of the Oxford County Council, Woodstock, Ont., have recommended that the county install an electric lighting plant for the lighting of the county buildings, the court house, jail and registry office.

The Spityee Mine at Rossland, B.C., is erecting a new 24 x 82 foot shaft house, and installing a new five-drill compressor plant with hoists and pumps of increased capacity. It is the purpose to sink the shaft from the 100 foot level, where it now is, to the 200 foot level.

Charles Barber & Sons, Meaford, Ont., makers of turbines and general foundrymen, finding their turbine business outgrowing their former capacity, are increasing their plant by adding a 40 x 80 feet moulding shop. The new shop will be equipped with two furnaces and the old moulding shop will be used to increase the floor space of the machine shop.

Plate by plate two large steel barges are taking shape on the stocks of The Collingwood Ship-building Co. The hulls of these magnificent vessels, some 400 feet long, are rapidly nearing completion, and the immense boilers are now being set up in the company's machine shops. These barges, which are said to be the finest ever built in Canada, are for Capt. Crangle, of Kingston, and Playfair, of Midland, respectively.

The farmers in the vicinity of Meaford, Ont., are making use of the many springs in the hills around that locality to provide themselves with private water-works systems. A storage tank, if the head is high enough, or a hydraulic ram in default, enables one to enjoy the delights of a rural habitation with the comforts of modern city conveniences. Wm. Butchart, hardware dealer, Meaford, reports an increasing demand for the installation of such systems.

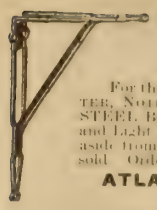
The Canadian Copper Company, which is controlled by The International Nickel Company, No. 71 Broadway, New York, is now purchasing considerable American equipment for installation in its new plant at Copper Cliff, Ont. Thayer & Co., Incorporated, Nos. 39-41 Cortlandt street, New York, acting on behalf of The Aultman & Taylor Machinery Co., of Mansfield, O., have taken the boiler contract. There will be four Cahall boilers of 400 horse-power each. The engines are to be of Corliss type. This contract was awarded to The Nordberg Manufacturing Co., of Milwaukee, Wis.

The contract for supplying electric light for Meaford, Ont., which has been held by Moore & Sons, has expired, and the firm have offered to renew the old terms for a period of ten years. The council, however, did not agree to the proposition, but made a counter offer for five years, one of the main conditions being that the firm shall develop 200 horse-power in all seasons. Waterpower is utilized for the development of the energy.

The Montreal District Council of the Brotherhood of Carpenters and Joiners is contemplating the establishment of a co-operative sash and door factory. The plan is to build a factory employing about 100 hands. About $25,000 will be required to start the scheme and this is to be subscribed by those going into the enterprise. The profits are to be shared by those engaged in actual production, who hope thus to eliminate the friction between capital and labor by uniting these factors of production in the same persons.

Guelph, Ont., is making efforts to have the Farmers' Co-operative Harvesting Machine Company, Limited, located in that city. The authorized capital of the company is $1,000,000 and it aims at securing as shareholders 100,000 Canadian farmers at $10 per share, and to make all kinds of implements, carriages, etc.

A new manufacturing firm has just been established in Guelph, that of Taylor & McKenzie, who will engage in the manufacture of wood-working machinery and do all kinds of repair and general work, making a specialty of experimental and model work and the making of special devices and tools. The business was first established in the beginning of March by Jas. A. Taylor, late of The Petrie-Taylor Co., and C. McKenzie, who has been foreman for the past three years of the iron tool department of The R. McDougall Co., Galt, and has a wide experience in machinery business, has lately gone into partnership with him.—Galt Reporter.



Will Hold Up a Shelf!

That's what a shelf bracket is for. For this purpose there can be NOTHING BETTER, NOTHING CHEAPER than the BRADLEY STEEL BRACKET. It is well Japanned, Strong and Light. The saving in freight is a good profit, aside from the lowest price at which the goods are sold. Order direct or through your jobber.

The Cramp Steel Plant at Collingwood

THE people of Ontario have been dimly conscious for the past few months of the extensive industrial development which has been taking place along the shores of the Georgian Bay, but a visit to this section is necessary in order fully to appreciate the magnitude of the operations there being carried on. No more striking example of this can be instanced than the Cramp steel works at Collingwood, which before the end of the month will be turning out steel angles, bars, squares, rounds and various other shapes required by Canadian trade from 6 in. down to ¼ in. at the rate of 120 tons per day.

The plant, which consists of two open hearth basic steel furnaces, an hydraulic plant, rolling mills and machine shops, is splendidly located on Georgian Bay, at the northern limits of the town of Collingwood. The site comprises 87 acres, 30 of which is water lots, and has 800 ft. of lake front on deep water. It is immediately beside the G.T.R and within a half mile of the company's own limestone quarries.

EXTERIOR VIEW OF THE WORKS.

THE OPEN-HEARTH FURNACES.

On approaching the works one's attention is immediately drawn to the open-hearth basic furnace building, with its twin 85 ft. steel stacks. Here the process of manufacturing steel begins, so far as the company is concerned, although it is not improbable that blast furnaces for making their own pig may be erected in the not distant future. The furnaces are inclosed in a square steel framed, sheet-steel enclosed building, 100 x 100 ft., with 30-ft. posts, and are served by three enormous steel cranes, one of 30 tons for handling the ladle, and the others 20 and 10 tons respectively for handling the ingots.

Each furnace has a capacity of 20 tons charge and is lined in the bottom with magnesite fire-brick, and above the fire line with silica fire-brick. The furnaces are, with some slight improvements, replicas of the latest furnaces at Sharron, designed by Ambrose Monell, and recently purchased by The United States Steel Corporation.

THE BASIC OPEN-HEARTH PROCESS

is wonderfully ingenious and comparatively simple. In the bottom of the furnace, lined with magnesite brick, whence comes the name basic, is placed a layer of limestone. On top of this comes a layer of scrap iron and finally a layer of pig iron. No coal or coke enters the furnace. Instead a water gas producer plant is installed behind the furnaces. Gas from this plant, together with air in proper proportions, is fed into the furnaces from above and burns with intense heat over the charge. The waste heat gases are then carried through flues into a chamber lined with checker firebrick, where they give up their heat before finding egress through the stack. There is a double system of these chambers and flues so contrived that when the waste heat is passing out through one system to the stack, the air for combustion in the furnace is passing in through the other. At the end of 20 minutes the checker lined egress chamber is heated to yellow heat. By means of the reversing valve the egress and ingress passages are interchanged, and the air passes in through the superheated chamber to the furnace. The result is that a very large proportion of the heat is kept in the furnace, and the whole mass of the charge reduced to a boiling liquid. The nascent lime, bubbling up through the iron, unites with any phosphorus in the charge and carries it off in the slag as phosphate of lime. The carbon is burned off and at the end of eight hours practically pure iron is left in the bottom of the furnace.

CONVERSION TO STEEL.

This is now drawn off in the ladle and may be converted to any desired grade of steel by the addition of the required amounts of coke and ferro-manganese to the ladle. This immediately unites with the iron, and the steel needs only to be poured out into ingot moulds to be ready for the rolling mill.

CAN MAKE ALL GRADES OF STEEL.

Technically these furnaces are the latest and most improved types of Siemens Martens open-hearth regenerative furnaces, designed to operate the Gilchrist and Thomas process of eliminating phosphorus and other impurities from the metal, and in them can be produced all ranges of steel from soft steel suitable for boilers, to high carbon steel, suitable for tools; also all forms of steel alloy, such as manganese or nickel steel. This process places the quality of the steel absolutely in the hand of the chemist, so there is no room for guesswork.

A short distance from the furnaces is situated the hydraulic plant, which supplies power for the cranes in the furnace-house. It is equipped with two rams capable of delivering water at the cranes at a pressure of 1,500 lb. to the square inch. A 11,000-gallon tank occupies a prominent place in one corner, and a 20-ton accumulator, for balancing the pressure, in the other. Here also is placed the Reihlie testing machine of 100,000 capacity, on which every charge rolled will be tested before leaving the mills, so as to gauge the tensile strength.

TRANSPORTATION FACILITIES.

The local transportation facilities have been admirably arranged. The company have a standard gauge railroad system connected with the G.T.R., and running by six switches to all parts of their works. They have their own yard-engine and elevated trestles, which obviate the necessity of hoisting either fuel, raw material or finished goods. A small narrow-gauge road serves to convey the ingots from the furnace-house to the rolling mills, and runs the pig and scrap onto the charging platform.

THE ROLLING PROCESS.

The rolling mill, the central building in the system, is of wood, sheeted with steel.

YOU SHOULD HANDLE THE DODGE WOOD SPLIT PULLEY.

You should know that these pulleys weigh but a fractional part of an iron pulley; that they offer a greatly increased belt friction; that they are far safer than iron pulleys; that they cost less to install and to maintain; that they offer an attractive line for hardware dealers everywhere.

Kept in stock they will meet with ready sale at desirable profits and will open up a permanent trade.

THE DURHAM RUBBER CO. Limited

BOWMANVILLE, ONTARIO.

[illegible] a finest span of 80 ft., with two [illegible] of 25 ft. each, a total of 120 ft. wide by 240 ft. long, with an annex of [illegible] a total length of 320 ft. It is claimed to be one of the most modern and best equipped rolling mills in the country. The mill is intended to bloom [illegible] and finish them in sizes from 6 in. down to [illegible] angles, bars, rounds, squares and various other shapes.

Hot ingots from the open hearth furnaces are brought in here as soon as stripped on the narrow gauge railroad and charged into two reverberatory heating furnaces, where they are reheated ready for blooming. Here they are broken down on a three high 18 in. roughing mill into billets. The material to be finished from 1¼ in. up, goes to an 18 in. finishing train, which will roll from that size up to 6 in. This train is equipped with a 60 ft. cooling bed, and is served by two alligator shears. The motive power is to be supplied by a 28 x 56 Reynolds-Corliss engine, now being completed in the shops of Inglis & Co., Toronto, and designed to develop 750 h. p.

After shearing, material for smaller sizes is sent on to a 12 in. train, known as a Belgian semi-continuous mill. It is designed for a large tonnage, has plenty of power and is equipped with looping devices and underground tunnels, leaving the floor clear, the iron as it passes from the rolls dropping into these tunnels. It will run a bar 120 ft. long. The bar runs out on straightening plates and after being whipped clear of kinks is dropped on a cooling bed made of rails 15 ft. wide by 120 ft. long. This mill can be run at a speed of 300 ft. per minute, and has a capacity of 100 tons per day. The cooling bed is served by a double upright shear, actuated by steam, and the whole train is belt driven by a 350 h.-p. Atlas rolling mill engine.

A Chandler & Taylor engine drives the shears and the fan blower for forcing air into the reverberatory furnaces. Water for the rolls is pumped by two large Dean rams. Billets and ingots are served to and from the furnaces and the rolls by a system of overhead trucks, cranes and telegraphs, and it is so arranged that the ingots are broken down and rolled without reheating. Steam for driving the rolling mill engines is provided by the four boilers in the power-house and by two upright water tube waste heat boilers on the heads of the heating furnaces.

ONE VIEW OF THE FURNACES.

POWER-HOUSE AND MACHINE-SHOP.

South of the rolling mills is the imposing stone power house and machine-shop. It is 170 ft. long by 70 ft. wide and contains four large standard tubular boilers, 16 ft. by 5½ ft., producing 150 h.-p. each. A 90-h.-p. Atlas engine furnishes power for the machine shop, and also drives the arc and incandescent electric light plant.

A 10 by 12 in. McGowan Monitor Duplex pump lifts water from a spring creek on the grounds to the 9,000 gallon tank, which supplies the boilers.

In the machine-shop proper, which occupies the east end of the building, is installed a screw cutting lathe, engine lathe, large 72-in. swing, roll-turning lathe; planer, Pillar radial drill, vertical drill, punch and shears, emery grinders, bolt cutter, large forge and Beaudray power hammer, all served by a 10 ton crane. The equipment is calculated to do any work required by the plant.

TO MAKE STEEL HERETOFORE IMPORTED.

The output of the works will consist wholly of staple material such as is used by the blacksmith, machinist, agricultural implement maker, and like users of steel in Canada. Most of this material has heretofore been imported, but the company are prepared to produce steel of any required degree of hardness, ductility or tensile strength. The mill was designed to supply the material demanded by the Canadian trade.

A GOOD MANUFACTURING CENTRE.

The situation of the plant gives ready access both to raw materials and to the market for finished wares. Steel scrap will be secured mostly from the railroads; pig iron from either Midland or Sydney; coal from Pittsburg, and lime stone from the company's own quarries. At present prices the total cost of raw material is less than at Pittsburg. By the Grand Trunk direct connection is secured with the industrial centres of Central Ontario, and by water with all the ports on the great Lakes, and the distributing centres for the Northwest.

When under way the firm will employ from 350 to 600 skilled workmen.

PERSONNEL OF THE COMPANY.

William Cramp and Charles B. Cramp, general manager and supervisor respectively of the William Cramp Company, of Philadelphia, until about five years ago, when the firm became a public company, and Major Collins, of Brazil, Ind., are the practical men in the company. Major Currie, the general manager of the company, assumed charge of the construction last August and has practically reared the present imposing group of buildings since that time. He was ably assisted by Mr. James Royce, of Toronto Junction, who is a technical graduate of the Massachussets School of Technology and who spent four years in the leading engineering works of the United States, having filled the important position of chief draughtsman in the Baldwin Locomotive Works, of Philadelphia; also by Mr. A. C. McMaster, a graduate of the School of Practical Science, Toronto. Mr. Royce is superintendent of the works, and it is the boast of the company that all the engineering work was planned and drafted in their own engineering department by Canadians.

The departments, as soon as the works are in operation, will be in charge of practical experts, Americans and Scotch

men dividing the honors. All connected with the works are young men.

The policy of the company on embarking in the iron and steel trade in this country, of commencing at the finishing end, will commend itself to the many users of iron and steel throughout Canada.

In addition, it might be said, that the output of the company's plant as planned and constituted, enjoys the benefit of a protective tariff.

COLLINGWOOD PROSPEROUS.

The town of Collingwood is experiencing an era of prosperity. Within the last few years the population has increased very rapidly in consequence of the industrial awakening and the business men are profiting thereby. The hardware trade is well represented and appears to be in capable hands. Their business sites are among the most prominent in the town, and the stocks carried are extensive and well displayed. J. Henderson, White Bros., A. W. Kelly and Gilpin Bros., carry the ordinary hardware lines; the two former particularly full stocks, including bar iron, piping, wire, cement, ship supplies and other heavy hardware. Mr. Henderson has, in addition, a plumbing department. Others in the tinsmithing and plumbing trade are McFadyen & McQuade, A. Duncan, W. Parrott and F. Occomore. Collingwood is a distributing centre for the upper lake ports, and a large trade in ship supplies is enjoyed. Heating and plumbing has become an important factor in the hardware trade, and is done entirely by local workmen who do work which would do credit to some of the larger centres.

THE 10-IN. ROLLING MILL.

LARGE IMPORTS OF RAILS INTO BRITISH COLUMBIA.

From our own Correspondent

VANCOUVER, B.C., June 6.—From the unprecedented quantities of steel rails being received at this port this season, the inference would be fairly drawn that there must be some very extensive railway operations in hand, or in contemplation, in the province.

Up to date there have been three large rail cargoes discharged at Vancouver. The big Blue Funnel steamer Achilles discharged nearly 5,000 tons of rails for the C.P.R. two months ago, and the sailing ship Islamount also brought a full cargo of rails for the same company, which were unloaded at the old Port Moody wharf, the original terminus of the C.P.R.

Last week the China Mutual steamer Keemun discharged at Moodyville wharf 2,000 tons of rails for the Great Northern. In all nearly 10,000 tons of steel rails from Hamburg and Rotterdam have been received so far this season.

Two sailing ships, the Astoria and the Maelgwne, are now due from Rotterdam with full cargoes of rails for the C.P.R. Another sailing vessel, the Lamorna, is also due with a large consignment of rails, presumably for the Great Northern. Two other sailing ships, the French ship Alice and the British ship Forteviot, are announced to arrive with rail cargoes to be discharged here. The Alice was loaded at Antwerp and sailed December 30, 1902, but had to put into Falmouth on January 22 for repairs. She sailed again on March 13.

Four large freight steamers of the China Mutual and Ocean SS. Co. lines are due to arrive some time within the next two months, each bringing large cargoes, portions of which are steel rails. They are the Ajax, a Blue Funnel boat of 7,039 tons burthen; the Telemachus, also a Blue Funnel steamer, 7,449 tons; the Machaon, 6,737 tons, a Blue Funnel steamer, and the Ning Chow, a China Mutual boat of the enormous capacity of 9,100 tons. All of these steamers are from United Kingdom ports.

The explanation of the large quantities of rails being received by the Canadian Pacific Railway is found in the plans of improvement on the roadbed of the coast section. Nearly all the old rails are to be taken up and replaced with much heavier rails, and it is asserted that some portion of the line is to be double-tracked. Another improvement which the company has had in hand for a long time and which may be undertaken this season is a short line from Beavermouth to cut off the long roundabout on the Upper Columbia river.

The cargo of the Keemun is almost all for the Great Northern Railway, which has now under way the grading of its line between this city and New Westminster. The rails will be used on this line, which is some 12 or 14 miles in length.

The Great Northern is making the extension under the charter of the Vancouver, Westminster and Northern Railway, which has secured Dominion and Provincial charters. The Great Northern lines are at present operated in this province to the south side of the Fraser river, opposite the city of New Westminster.

The big Government bridge across the Fraser River, at present under construction, will be used to cross the river, and the intention is to have the rails laid on the line into Vancouver as soon as the bridge is ready, when direct connection will be established. This will at once give competitive railway service to Vancouver, a factor which will have important bearing on freight rates in future.

It is hard to estimate the influence this change will have on the whole question of freights, but the biggest benefit will be in the receipt of goods from eastern Canada, as the Great Northern can, of course, with its eastern rail connections, give through rates as good or better than have obtained hitherto. There is, of course, to be taken into consideration the fact that Vancouver, being a seaport, has to a certain extent been independent of railway domination in the matter of freights. It is also to be remembered that for a year or more the cars of the Great Northern have been brought direct into the city on the railway barge operated from the present terminus of the Great Northern at South Westminster. This has made it possible to get through shipments in straight cars without breaking bulk, but direct rail connection will be an improvement.

GEO. S. B. PERRY.

MR. GEO. H. SMITH.

MERIT is, as a rule, responsible for the advances made by men in business life. The appointment of George H. Smith, recently with Rice Lewis & Son, as buyer for The Kennedy Hardware Co., 49 Colborne street, Toronto, is recognized by the trade throughout Ontario as a case in point.

Mr. Smith has found no "royal road" to success in the hardware trade. Instead, he has persistently worked his way onward and upward since his start about twenty years ago as a clerk with Hatch & Bro., retail hardware dealers, Whitby, Ont.

After serving several years with Hatch & Bro. and getting a thorough acquaintance with the details of the trade, Mr.

GEORGE H. SMITH.

Smith engaged with M. & L. Samuel, Benjamin & Co., being engaged during the last few years as assistant to the late H. E. Rutledge, buyer. When the latter firm sold out their shelf hardware business Mr. Smith severed his connection with that concern and five years ago engaged with Rice Lewis & Son, Limited, during which time he has represented them in Toronto and vicinity.

An intimate knowledge of both metals and shelf hardware, the habit of industry and strict attention to business have won for Mr. Smith a wide acquaintance and an enviable reputation, which makes his appointment seem the natural sequence of events.

Since accepting his present situation Mr. Smith has looked over the field carefully and pronounces himself as more than satisfied with the prospects of the new company. "Every week has witnessed," said he to HARDWARE AND METAL, "an increase in our business and the indications seem to point to a sound and satisfactory business for us right from the start."

OBITUARY.

THE LATE JAMES H. PECK.

MUCH regret is expressed at the death of Mr. James H. Peck, of the Peck Rolling Mills, Limited, Montreal, which occurred at his home in that city, Tuesday morning, June 9th. The firm to which he belonged is one of the oldest nail and tack manufacturing establishments in the Dominion, and one which has been foremost in the trade for years. The business was established by the deceased gentleman's grandfather under the name of Thomas Peck & Co., and on the death of the founder his son (Mr. James H. Peck's father) continued the business, though the firm name became Peck, Benny & Co. Mr. Robert Benny died some years ago, and the business was carried on by the deceased gentleman and his brother, Mr. Thomas Peck. Not long ago the name of the firm was again changed, and become The Peck Rolling Mills, Limited, as it is at present.

The late James H. Peck was born in Montreal in 1851. He became one of that city's most prominent business men, and for many years was a member of the Montreal Board of Trade. He was a genial and kindly man who made many warm friends in business and social life, by whom his death will be sincerely mourned. He had not been in good health for more than a year, and last year went south to recuperate. His trips appeared to have done him good at the time, and though his health was by no means robust, his death came unexpectedly. He was at the office the day before his death, and complained of feeling ill when he went home. On the following morning he died.

Mr. Peck leaves a widow and seven children, six sons and one daughter.

PERSONAL MENTION.

Mr. W. F. Beardshaw, managing director of J. Beardshaw & Son, Limited, The Baltic Steel Works, Sheffield, England, who is president of the Sheffield Chamber of Commerce, writes their Canadian agent, Mr. Alexander Gibb, that he expects to arrive in Montreal about August 17, to take part in the conference of the Chambers of Commerce of the Empire.

Cable Address { Adscript, London. / Adscript, Canada.

A STRIKE ECHO.

A FEATURE of the recent strikes in Montreal, which made itself perhaps more apparent in the paint business than in any other in which readers of this paper are interested, was the effect they had on other employes who sympathized with the strikers.

The unsettled condition of labor, coupled with the aggressive attitude adopted by the striking unions, became contagious, and a spirit of independence and carelessness about work took hold of other workpeople.

In the paint factories, some of them, employes, girls particularly, would stay away from work for a day or two for no apparent reason, but to dare their employers to make trouble about it, and in various other ways little difficulties and annoyances were placed before the master workmen. The result was another reason for slowness in delivering goods, and many complaints from jobbers to manufacturers were made.

The growth of this spirit became very noticeable throughout the city, and it was going from a bad to a worse stage when the strikes ended. This state of affairs continued throughout the weeks between the commencement of the 'longshoremen's strike and the ending of that of the street railway employes. The defeat of the latter made a big difference in the attitude of other workmen to their employers, and the latter were as a rule able to keep a full staff at work.

KEEPING STOCK WELL ASSORTED.

MUCH can be said and written regarding the advisability of attractive interiors and window displays, of bright, fetching advertising, of progressiveness in methods to win and hold trade, but, after all, the important feature of business is to have for sale what the people want at fair prices.

There are many merchants who seem enterprising and progressive, but there are few who "get ahead," who seem to make more money every year than they did the year previous and more than any of their competitors do. It is a safe statement that in four cases out of five the successful retailers have had the best assorted stock in their town, not necessarily the largest stock, but the one most suitable for the demands of their constituency, the town and country in which they have done business.

Nothing so pleases a customer as being able to get exactly what he wants at a fair price, and nothing wins so many customers from one store to another as the ability to get in the latter what was not to be procured in the former.

THE ONTARIO CROP OUTLOOK.

NOTWITHSTANDING the great strides Canada has made in recent years as an industrial country, our business men still watch with keen interest the crop conditions, realizing that in agricultural prosperity we have the surest guarantee of a continuation of business expansion and industrial activity.

It is, on this account, interesting to note that according to the Ontario spring crop bulletin the outlook for the present year is favorable. Reports regarding fall wheat agree that while the acreage is less than last year the condition of the crop is excellent, only a very small proportion being damaged during the winter. Clover is reported to be generally satisfactory, the prospects being particularly bright in Western Ontario.

As the bulletin was made up on reports received May 2 the statement does not cover recent conditions, yet it shows a good start, except in the Niagara peninsula. It will be remembered, however, that during May abundant rains, especially in Western Ontario, improved conditions greatly, and that the rains of the present week are of widespread benefit. Live stock outlook is classed as good, but not exceptionally so. Orchards are credited with having come through the winter in excellent order.

The harder one works the easier is it to make business successful.

U.S. STEEL CO. IN CANADA.

HARDWARE AND METAL is informed on good authority that The United States Steel Co. has definitely decided to locate a branch in Canada. Rumors to this effect have been rife for some time, but the matter now seems to be definitely settled. The location of the site now appears to be the only question to be settled, and even in this particular it is likely that Port Colborne, Ont., will be the point chosen. The advent of this billion-dollar corporation in Canada will add much to the importance of the iron and steel industry in this country.

This is only another addition to the number of large American concerns which have during the last few years established branches in Canada. In fact, almost every important manufacturing industry in Canada to-day is in some way or other associated with American capitalists. Almost before our own people seemed to realize the wealth of our natural resources, capitalists in the United States had discovered in Canada an attractive field for their enterprise.

MR. BORDEN AND THE IRON INDUSTRY.

DURING a speech in the House of Commons on Tuesday, Mr. R. L. Borden, leader of the Opposition, contended that all would agree with him that the iron and steel industry in Canada was not in a flourishing condition,

It is rather strange to hear a man of Mr. Borden's undoubted ability, make such an assertion. The only explanation we can give of his lapse from the facts is that, not being a business man, he is not in close touch with the business world.

Undoubtedly there are some of the companies manufacturing iron and steel in Canada that can scarcely be called in a prosperous condition. It is, however, well known that it is not on account of the condition of the iron and steel trade in general, but to mismanagement. Well managed iron and steel companies in Canada to-day are about as busy as they well can be, and have been so for the past two or three years. The representative of one of the largest iron and steel companies in Canada only a few days ago informed HARDWARE AND METAL that they had orders enough on hand to keep them going for at least another three months and that they considered the outlook favorable for the continuance of the present active conditions for some time to come.

During last year the furnaces in Canada turned out over 300,000 tons of pig iron, which is an increase of over 100 per cent. compared with 1901. In spite of this, however, their output was much curtailed on account of the scarcity of fuel and the congested state of railway traffic, the result of which was they were unable to supply the demand ; at times they were even compelled to refuse to book orders for immediate shipment. This does not look as if the iron industry was in an unsatisfactory state.

It is true that the export trade has fallen off during the first ten months of the present fiscal year. During the ten months ending March last the quantity exported was but 17,086 tons compared with 76,287 for the same period last year. But this is easily explained. During the ten months of 1902 the shipments to Great Britain were 70,754 tons against 2,387 tons for the same period this year ; but it must be remembered that the British market has been on an export and not on an import basis for some time. Our exports to the United States however have on the other hand increased from 5,109 tons during the first ten months of 1902 to 14,594 tons this year.

In the United States, as in Canada, there has been during the last year a demand for pig iron, and in fact all kinds of iron and steel, in excess of the ability of the home market to supply, and it was therefore necessary for users of pig iron and steel to draw upon the foreign market in order to complete their requirements.

Our imports of pig iron during the ten months ending March last were 63,033 tons against 20,883 during the same period in 1902. The United States during the ten months ending April last imported 825,214 tons against 95,795 tons for the same period last year. In bar iron, steel rails, ingots, billets, etc., large increases are also shown. In exports, the United States during the ten months exported only 15,723 tons, about one-fourth less than Canada did during the nine months, while during the ten months ending April, 1902, they exported about 60,000 tons. It is evident, therefore, that the relative positions of Canada and the United States, as far as the iron and steel trade are concerned, are practically the same. We both have had to import iron and steel to supply our demands. And yet no one claims that the iron and steel industry of the United States is in an unsatisfactory condition.

Mr. Borden also insinuated, if the newspaper reports of a speech are correct, that nothing had been done for the iron and steel industry in Canada. If he meant that the government had not done sufficient, possibly he might be correct, but it must be remembered that not only does the customs tariff fairly protect some of the lines of iron and steel manufactured in Canada, but that in addition to this substantial bounties are given on pig iron and some lines of steel. In bounties on pig iron last year over $700,000 was paid, and on steel nearly $90,000.

HARDWARE AND METAL has no desire to discourage the movement for the readjustment of the iron and steel tariff, but it does desire to see the reasoning logical and the statements true to facts. The iron and steel tariff, as introduced by Sir Charles Tupper 16 years ago, was sufficient for that day, and the changes which have from time to time been made since then have been in accordance with the expansion and development of the iron and steel industries. Since the last adjustment of the tariff the iron and steel industry has developed at a rate proportionately far in excess of any previous period in the history of the country.

Although the iron and steel tariff of 1897 was, on the whole, the best we ever had, probably due to the fact that the master mind in its framing was both a hardware merchant and a large manufacturer, the late Geo. Bertram, M.P., it by no means follows that it is unchangeable. We believe that the time has come when a revision of the iron and steel duties should take place, simply because there are industries in existence appertaining to the iron and steel trades that were not even in embryo five or six years ago. It does not follow that there should be an advance all along the line. Possibly in some instances it may be in the interest of the country to make a reduction in the duties, but if we are to make rails and other lines of steel, it is idle to expect that we can do so with any degree of success without legislative assistance of some kind.

HARDWARE SPECIALTIES.

Hardware retailers are continually introducing specialties which, if put on the market, would readily meet with favor at the hands of the trade. In many cases the introduction of these novelties is de layed by difficulty in placing them before the trade. In order to assist any reader who may have such an article to introduce, HARDWARE AND METAL will publish in its reading columns a description, if accompanied by photograph or design, of the specialty. This offer covers any article to be introduced to the trade, not articles which have been on sale for some time.

BUSINESS MEN AND CORRUPT GOVERNMENT.

PURITY of government depends neither upon partisan nor non-partisan bodies. It depends upon a healthy public opinion. The stream, as the old maxim says, is no purer than its source.

In Ontario we have for some months been treated to a spectacle which has excited interest from one end of the Dominion to the other. We have reference to the Gamey investigation. In that province government is by party. In British Columbia there has been an investigation into the conduct of Ministers of the Crown. These Ministers were members of a non-partisan Government.

While the investigation in Ontario has been closed without the source of the money being revealed with which Mr. Gamey claims to have been bribed, the proceedings have thrown a great deal of light on the doings of the politicians. The same can be said with equal truth with regard to the investigation which has been going on in British Columbia. As a result of these investigations many honest men have no doubt come to the conclusion that the average politician or man in office is by no means the ideal citizen. He certainly does not possess the qualities of the business man. His concern is not the public good. By his methods one concludes that he deems the assets of the country a fund for the enrichment of political friends.

Under the circumstances business men can hardly be blamed for feeling discouraged and tempted to wash their hands of political parties. At the same time, however, they cannot ignore their responsibility; and while they may stand aloof from political parties they cannot well stand aloof from participation in the affairs of state. And this means that they must exercise their influence as well as deposit their ballots for men who are noted for their integrity and business ability.

As long as public opinion is dull and apathetic we cannot expect to have businesslike and honest government. To be neither hot nor cold in regard to the public affairs of the country is worthy of condemnation scarcely a degree less severe than the condemnation of crooked and inefficient government. If we are to have bussinesslike and honest men in Parliament and in our municipal bodies, there must be concurrent action on the part of those who desire the same.

If the investigations in Toronto and Victoria result in the creation of a healthier public opinion, not only in the provinces directly concerned but throughout the whole Dominion, a great deal of good will have been done in the direction of correcting the political evils that undoubtedly exist in this country. Where there is a strong and healthy opinion, crooked politicians and greedy office-seekers can no more run riot than can a mob when guarded by armed bodies of organized men.

BUILDING OPERATIONS DELAYED.

THE unusual development of recent years has undoubtedly created the necessity for exceptional building activity in nearly all parts of Canada. Yet in many cities conditions are such as to more than offset this necessity and to retard building in a great degree. In Toronto, for instance, the amount of building done has been just about half what was proposed in the winter, and has not been materially greater than in what was considered the dull years. The cause has been largely labor troubles, yet the price of materials has also been a factor in the situation.

A fair illustration of the conditions has been provided during the week by the opening of tenders for work on Harbord Street Collegiate Institute. The work to be done was exactly the same as a similar tender given out in 1898. The comparative figures are interesting :

	1898.	1903.
Plumbing	$1,685	$3,475
Masonry	482	1,800
Carpentering	375	707
Painting, etc	90	129
	$2,632	$6,111

It is not surprising, in view of the high prices at present prevailing, and the delays caused by strikes, that building operations are not as active as anticipated.

Crooked politicians steer straight for their own interests.

GERMANS MAY MEET THE SURTAX.

A HALIFAX, N.S., despatch states that a large German hardware firm, in a letter to an agent in Halifax, declares that they were prepared to meet the surtax, if they could not sell at the advanced prices, by reducing their prices 5 per cent. to 10 per cent. They considered that the surtax was only a temporary arrangement, and they feared that if once they lost the Canadian trade they might not regain it. Among the articles in which they were prepared to cut prices were skates and cutlery. The cutlery, of course, is of the cheaper grades. Local hardwaremen anticipate no trouble in obtaining in other markets, if necessary, the goods they have been buying in Germany; but it is probable that they will continue to patronize the German, and that the Canadian consumer will pay the surtax. In speaking of German manufacturers, local wholesalers in different lines say that the Germans are better people to deal with than the English. They have one price where the English have many, and there is no need of haggling when dealing with them. They are more enterprising than the English, are right up-to-date and ready to make a line of goods in the way that they are asked to instead of spending much time trying to sell some other kind of goods. The only change in the prices in the hardware line lately has been in building paper, which has advanced from 5 per cent. to 10 per cent. The trade is slack now between the spring and summer trade.

"CONQUEROR" STEEL.

A large consignment of "Conqueror" steel from John Beardshaw & Son, Limited, Sheffield, Eng., has just been received by Lewis Bros. & Co., Montreal, who have been appointed sole agents for Canada for this brand of steel.

The trade seeking the best quality of steel at a low price are invited to correspond with Lewis Bros. & Co. All regular sizes of round, square and octagon, also the staple sizes of cant dog steel, are carried in large quantities. Lewis Bros. & Co. state that they are in a position to make prompt shipment of "Conqueror" steel at any time.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, June 12, 1903.

HARDWARE.

THE movement in general hardware is satisfactory, and the only cause of complaint with jobbers is the inconvenience that they are still being put to by the congested state of affairs on the wharf, which has not yet been entirely dissipated since the tie up by the laborers' strike. Several firms cited instances where they had handed bills of lading to the railway companies over three weeks ago, and the latter were only beginning to move the goods this week. The secret of the trouble appears to be that the railway companies are suffering from a temporary car famine, having more traffic to handle than they have rolling stock to accommodate it. In other cases also the docks have been and are still so crowded that importers have been unable to get at their own particular lots until the "raft" of other material which engulfed them had been cleared away. A scarcity of carters has been felt very severely in this connection. This condition of affairs, however, was due to unusual circumstances, and matters are being gradually straightened out and will soon, we hope, be in smooth running order. In the meantime country dealers should in fairness make some allowance for the trouble which the trade here were being put to. As regards prices, there have been few important changes. Cotton rope is 1c. higher, and cotton bed cord is 50 per cent. higher, while cotton twine is 1c. higher. Wooden washtubs have also been advanced 10 per cent. Other lines show no quotable changes.

LAWN MOWERS.—Complaints are still being made about deliveries. We quote as follows: 10-in. wheel x 12-in. cutter, $7.50; by 14-in. cutter, $8.00; by 16-in. ditto, $8.50; by 18-in. ditto, $9.00; by 20-in. ditto, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½ inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—There are still a few lots moving. We quote $2.80 per 100 lb. f.o.b. Montreal, and $2.55 f.o.b. Cleveland. Carlots of 15 tons are quoted f.o.b. Cleveland at $2.45.

GALVANIZED WIRE.—Orders of fair volume continue. We quote as follows: No. 5, $3.70; No. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—Trade is fair, but for small individual lots. We quote: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE STEEL WIRE.—Unchanged as last quoted at 25 per cent., with extras: 1 and 2-lb. hanks, 25c. per 100 lb.; ½-lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—Discounts remain at 60 per cent. and trade is quiet.

PRESSED SPIKES.—Small lots are still asked for. Discount remains at 20 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

FENCE STAPLES.—There is a quiet trade in these. We quote: $3 per 100-lb. keg for galvanized and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

CUT NAILS.—Business on account of new orders is light, but a good quantity is still moving. Prices are unchanged at $2.45 per keg f.o.b. Montreal.

WIRE NAILS.—Are still asked for and stocks are not as ample as dealers would like. We quote carlots at $2.40 and small lots at $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

HORSE NAILS.—Are well inquired for and moving freely. We quote: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, prices quoted on application. "C" brand, 40, 10 and 7½ per cent. off; "Monarch," 65 and "Peerless," 50 per cent.

HORSESHOES.—There is a good turnover of these. We quote as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; X L steel shoes, new, light pattern, sizes 1 to 5, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—Business quiet. Discounts are: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off, and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—These are wanted in many ways. Discounts are as follows: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent.; machine bolts, 50, and 5 and 10 per cent.; coach screws, 66 2-3 and 10 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 and 10 per cent.; bolt ends, 50 and 5 and 10 per cent.; plough bolts, 50 and 5 and 10 per cent.; tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3¾c. per lb. off list; hexagon nuts, 4c. per lb. off list.

SCREWS.—In fair inquiry. We quote as follows: Round head bright, 82½ per cent.; flat head bright, 87½ per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

CORDAGE, ETC.—In fair demand. Cotton rope and twine are 1c. higher. We quote: Pure manila, 14c.; British pure manila, 12c.; sisal, 11½c.; double lath yarn, 11½c.; cotton rope, 15½c.; cotton twine, 17 and 20c. for 3 and 4 ply.

BUILDING PAPER.—Trade has been well maintained at the rise. We quote as follows: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.50 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O K and I X L, 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

SHOT.—In good request. Prices are as follows: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7.00 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount, 15 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

FIREBRICK.—Unchanged. We quote: $16 to $22 per 1,000 for English and $17 to $22 for Scotch, as to brand.

CEMENT.—Trade continues brisk. We quote: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl. ex-store, and American, $2.20 to $2.40 ex-cars.

METALS

The heavy iron and metal market has ruled easy in its general tendency, but there has been no change in spot prices as yet. In the United States heaviness in pig iron continues, and the general situation in it is attracting the attention of the entire trade, for coming as it does after the tremendous boom of 1902 it is somewhat perplexing in its aspects. At present, therefore, the general disposition is a waiting one. Advices from England in regard to tinplate say that the principal demand has been for squares and odds for the home and European markets, and that owing to the heavy feeling in pig tin prices have shown some weakness among holders of stock plates, but that the majority, as a rule, decline to meet the views of buyers.

PIG IRON.—Trade is a waiting one at present in this line, owing to situation in the States. We quote: Parron, No. 1, $21; do, No. 3, $19.75; Middlesboro', $17.75; Ayersome, No. 1, $19.75; do, No. 3, $19.50.

BAR IRON.—There has been a fair demand for these, and the unsettled feeling outside has not affected spot prices. We quote as follows: Merchants' bar $2; horseshoe iron, $2.25 and forged iron, $2.30.

BLACK SHEETS.—Are moving out well at former quotations. We quote: 28 gauge, $2.45; 26 gauge, $2.40; 22 to 24 gauge, $2.35, 18 to 20 gauge, $2.30 and 8 to 10 gauge, $2.40.

GALVANIZED IRON.—There is a good trade doing in these. Quotations are: 28, Queen's Head, $4.40; Apollo, $10\frac{3}{4}$ oz., $4.30; Fleur-de-Lis, $4.15; Comet, $4; Bell brand, $4.05. In less than case lots, 25c. extra.

LEAD PIPE.—Continues as last reported. We quote 8c. for composition waste and 7c. for ordinary, with 30 per cent. discount.

IRON PIPE.—Without change. We quote as follows: Standard pipe, per 100 ft., in lengths under 19 ft.: Black, $\frac{1}{4}$, $2.40; $\frac{3}{8}$, $2.65; $\frac{1}{2}$, $2.85, $\frac{3}{4}$, $3.65; 1-in., $5.20; $1\frac{1}{4}$, $7.35; $1\frac{1}{2}$, $8.95; 2-in., $12.55. Galvanized, $\frac{1}{4}$, $3.20; $\frac{3}{8}$, $3.45; $\frac{1}{2}$, $3.85; $\frac{3}{4}$, $5; 1-in., $7.20; $1\frac{1}{4}$, $10.05; $1\frac{1}{2}$, $12.20; 2-in., 416.85. Extra heavy pipe, plain ends, are quoted per 100 ft. as follows: Black, $\frac{1}{2}$, $4.20; $\frac{3}{4}$, $5.25; 1-in., $7.55; $1\frac{1}{4}$, 410.55; $1\frac{1}{2}$, $12.75; 2-in., $17.60. Galvanized, $\frac{1}{2}$, $5.20; $\frac{3}{4}$, $6.65; 1-in., $9.55; $1\frac{1}{4}$, $13.25; $1\frac{1}{2}$, $16; 2-in., $21.90. For threads and couplings on extra heavy 5 per cent. net is added. Trade discount, 5 to $7\frac{1}{2}$ per cent.

SOIL PIPE.—Rules steady. We quote: Light soil pipe, 3 to 6 in., 50 per cent.; medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8-inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.; extra heavy fittings, 8-inch, 45 per cent.

TINPLATES.—Cable advices report an unsettled feeling in values in Wales owing to the heavy feeling in pig tin, but there has been no reflection of the fact locally. It is understood that Canadian importers have been doing a little more in Alloway charcoals on the basis of 12s. 6d. per box. Locally we quote charcoal $4.25, and cokes $3.85 to $4 as to quantity.

INGOT COPPER.—The tendency in this metal continues easy at leading foreign markets, but there has been no change locally, prices ranging from $15.50 to $15.75 per 100 lb.

INGOT TIN.—Easiness at leading distributing points does not affect the spot price on this metal, which remains at $33 to $33.25 per 100 lb.

PIG LEAD.—Continues steady at $3.50 to $3.75.

STEEL.—Steady; fair inquiry. We quote: Mild, $2.05; sleighshoe, $2.10 to $2.20; tire, $2.15 to $2.25; spring, $2.85 to $3; reeled machinery, $2.75 to $3; toe-calk, $2.60 to $2.75; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.50.

TOOL STEEL.—Remains as last noted. We quote: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Leonard's, $7\frac{1}{2}$c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATE.—There is a brisk movement in these. We quote as follows: 52s, $2.60 to $2.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

TERNE PLATE.—Remains steady at $7.25.

COIL CHAIN.—Quiet and steady. We quote: No. 6, 10c.; No. 5, 9c.; No. 4, $8\frac{1}{2}$c.; No. 3, 7c.; $\frac{1}{4}$-in., $6\frac{1}{4}$c.; 5-16-in., $4.90; $\frac{3}{8}$-in., $4.20; 7-16-in., $4; $\frac{1}{2}$-in., $3.90; 9-16-

in., $3.75; ⅝-in., $3.60; ¾-in., $3.50; ⅞-in., $3.45, and 1 in., $3.40, with 10c. allowance on carlots.

SOLDER.—In fair request at 20c. for bar and 19c. for wire.

ZINC SPELTER.—Firmness is advised from outside, but the local situation is so far unaffected. We quote $6.25 to $6.50.

SHEET ZINC.—Unchanged at $6.75 to $7, as to gauge.

SCRAP METALS.

Continue much the same. Our quotations are as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $17 to $17.50; No. 2, $7.50 per ton; machinery scrap, $17.50 to $18; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6¼ to 6¾c. per lb.

RAW FURS.

Buying is about over for the season. What lots are being offered now are small and not of the best quality, consequently prices are shaded below those here given. For any good quality of furs, however,, the following prices still hold good:

	Large	Medi'm	Small	Kitts				
BEAVER—Labrador and choice Eastern	$6.00	$5.00	$2.75	$1-1.50	Fall Beaver $2.00 to $2.50 per pound.		Spring Beaver $3.00 to $3.25 per pound.

TALLOW.—Quiet at 6 to 6½c. for refined, with rough tallow 3 to 3½c.

ASHES.—Firm. First pots, $5.50 to $5.70, and seconds $4.65, and pearls nominal at $6.25 per 100 lb.

ONTARIO MARKETS.

HARDWARE.

Toronto, June 12, 1903.

NOTWITHSTANDING the recent crisis in financial circles and the pessimistic utterances of some politicians, there is a cheering air of confidence in business circles. Manufacturers of many lines are just beginning to catch up with orders, and while trade is not as active as was the case a few weeks ago, it is still of larger volume than is usual at this time. The crop reports are, on the whole, satisfactory. A banner fruit crop is expected from the Niagara district. The recent rains have served to refresh many sections of Ontario which were in need of refreshment. Prices are well maintained throughout; changes all being toward higher prices. Sashcord is 1c. higher, and further advances are predicted. Coil chain is about 5 per cent. higher, but some dealers are still taking orders at the old figures. There is still a scarcity of spades and shovels.

BARB WIRE.—A fair demand continues. The base price is as follows: $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

GALVANIZED WIRE. — The demand seems to have been about met and trade is easing off. Our quotations are as follows: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots and at $2.15 in carlots.

SMOOTH STEEL WIRE.—Trade is now quiet. The base price is $2.50 per 100 lb. Oiling 10c.; coppering 60c.; and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

COIL SPRING WIRE.—An excellent trade has been done, but it is about over. Prices firm. We quote: No. 9, $2.75; No. 11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less, with freight up to 20c. allowed.

WIRE NAILS.—Makers seem to have about caught up to the demand. An active trade continues. We quote: Carlots, $2.40 and small lots, $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—An excellent demand keeps up at $2.50 per keg f.o.b. Toronto.

HORSE NAILS.—A fair demand is recorded. The correct discount on "Monarch" is 60 per cent., not 65 per cent., as erroneously printed on page 58 of this issue. Quotations are: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 60 per cent., and "Countersunk head," 60 per cent.; on "Peerless," 45 and 7½ per cent.

HORSESHOES.—A fair trade doing. We quote, f.o.b. Toronto: Iron shoes, No 2 and larger, $3.80; No. 1 and smaller, $4.05. Steel, new light shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20. Snow shoes, No. 2 and larger, $4.05; No. 1 and lighter, $4.30. If shipped from factory, 10 to 15c. less.

SCREWS.—An excellent demand, with some lines still scarce. We quote: Flat head bright, 87½ per cent. discount; round head bright, 82½ per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

RIVETS AND BURRS.—Still in good demand. We quote: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.

BOLTS AND NUTS.—Manufacturers are still away behind their orders, nearly all sizes being affected. We quote as follows: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron, ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

BINDER TWINE.—A good business continues. Prices are steady. We quote: 650 ft., 13c.; 600 ft., 12c.; 550 ft., 11¼c.; 500 ft., 10½c.

CORDAGE.—A good demand is noted, the market being firm in anticipation of another advance. Sashcord is 1c. higher and is still stiff. We quote as follows: Pure manila, 14½c.; British pure manila, 12c.; sisal, 11½c.; double lathyarn, 11½c.; single lathyarn, 11c.; double shingleyarn, 11½c.; single shingleyarn, 11c.; sashcord, 25 to 30c.

LAWN MOWERS.—Jobbers report less trouble in getting goods to meet their orders. Prices are firm and steady We quote: Woodyatt, 12-in., $7.50; 14-in., $8; 16-in., $8.50; 18-in., $9; 20-in., $10; Star, 12-in., $5.50; 14-in., $5.75; 16-in., $6; Daisy, 12-in., $4.90; 14-in., $5.10; 16-in., $5.30; Ontario, 12-in., $14.25; 14-in., $15.80; 16-in., $16.80; 18-in., $18.90; 20-in., $20.50; Philadelphia, 12-in., $6.50; 14-in., $7; 16-in., $7.50. Discount, 40 and 10 to 50 per cent.

SOIL PIPE AND FITTINGS.—A big trade is doing, with prices steady and the discounts quoted as follows: Light soil pipe, 45 and 5 per cent.; light soil pipe fittings, 50 and 5 per cent.; medium and extra heavy pipe and fittings, 55 and 5 per cent.; 7 and 8-in pipe, 40 and 5 per cent.

BRASS GOODS.—The demand for both plumbing and steam specialties continues brisk. Discounts are unchanged.

BUILDING PAPER.—An advance was noted last week, but the figures were not

altered, which is consequently done now. Quotations are: Tarred felt, \$1.85 per 100 lb.; 2-ply ready roofing, 95c. per roll; 3-ply, \$1.20 per roll; carpet felt, \$2.30 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 50c. per roll; tarred fibre, 65c. per roll, O K and I X L, 70c. per roll, heavy straw and sheathing, \$35 per ton; slaters' felt, 65c. per roll.

SCREEN DOORS.—Quotations are: Screen doors, common, 2 or 3 panel, walnut stained, 4-in. style, \$6.80; stained, yellow or green, \$7; in natural colors, oil finish, \$8.15; 3-inch style, 20c. per dozen less.

PLUMBING FIXTURES.—The demand keeps active, and some lines of earthenware stocks are light. Prices are steady.

RUBBER HOSE.—The advance is maintained. Lawn standard is now quoted at $5\frac{1}{2}$c. per ft. for $\frac{1}{2}$-in. and $6\frac{1}{2}$c. per ft. for $\frac{3}{4}$-in.

FORK HANDLES.—There is a brisk business at the new discount. 50 per cent.

PRESSED SPIKES.—A new list has been issued, as follows: Per cwt.—$\frac{1}{4}$-in. x 4, $4\frac{1}{2}$-in., \$4.75; 5 16 in. x 5, 6 in., \$4.50; $\frac{3}{8}$-in. x 6, 7, 8-in., \$4.25; 7 16 in. x 7, 8-in., \$4.10; $\frac{1}{2}$-in. x 9, 10, 12-in., \$3.90. The discount is 20 per cent.

TINWARE AND ENAMELWARE.—The demand keeps up excellently, all lines being in demand.

MILK CAN TRIMMINGS.—A particularly heavy demand is noted, particularly from the dairying districts of Eastern Ontario. One jobbing house reports an increase in business to this section and for this line of fully 50 per cent. over former years.

CEMENT.—The demand continues active, absorbing all offerings, both of foreign and domestic production. A big demand is noted. We quote in carlots, Toronto, as follows: Canadian Portland, \$2.50; German, \$2.40 to \$2.50; English, \$2.30 to \$2.50; hydraulic, \$1.50. Small quantities are 15 to 25c. higher.

METALS.

The market continues in a healthy condition. Many buyers are holding back their contracts for the latter half of the year in the hope of further concessions. Prices are, however, steadier than they have been. The United States iron market seems to have recovered in a large degree from the causes which gradually lowered prices there, and now there is not apparent a disposition to still further cut prices. Some authorities foresee higher prices, when the buyers who are now staying out of the market start making their purchases for the latter half of the year. Copper and tin continue to decline at both London and New York, but no change is reported here. Steel, Canada plates, lead, tinplates and galvanized sheets continue firm. No changes are reported throughout.

PIG IRON.—A steadier tone is manifest in the larger markets and, despite statements in Parliament to the contrary, a confident feeling pervades the market. Many buyers are holding off for a further cut. Canadian smelters are reported to be sold well in advance and jobbers predict a scramble for the metal before many months. Importations have been delayed by slow dockage facilities at Montreal. We quote f.o.b. Toronto, Hamilton and Midland No. 1, \$22.50; Sydney No. 1, \$20.50; No. 1 Jarrow, \$21.50; No. 2 Summerlee, \$25.

BAR IRON.—The price noted last week in Canadian grades. Prices are firm at now seems general, which means a reduction of 5c. The base price is now \$2. For extras, cut to length while rolling, 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

STEEL BOILER PLATES.—A steady trade is doing with the base price still \$1.96 f.o.b. Toronto.

TOOL STEEL.—A big business is doing with prices firm: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8 to 9c.; Park's "Silver," 12 to 14c.; Park's "Special," 15 to 20c.

MACHINERY STEEL.—The activity continues, with prices firm at \$2 to \$2.05 f.o.b. Toronto.

COKE.—In good demand. Quotations range from \$6.75 to \$7.15 for 72-hr., and \$5.50 for 48-hr. furnace coke, f.o.b. Toronto.

BLACK SHEETS.—A good demand continues. We quote: Common, \$3.15 for 28 gauge and dead flat, \$3.50 for 26 gauge.

CANADA PLATES.—There is trouble in securing prompt delivery of orders, the goods being delayed at Montreal. A good trade doing. Import orders are coming forward freely. Prices are steady. We quote: All dull, \$2.90 to \$3; half-polished, \$2.85 to \$3.10 and all-bright, \$3.75 to \$3.85.

GALVANIZED SHEETS.—A big trade has been recorded this season, the activity of building creating large needs for eavetroughs, conductor pipes and cornices. Prices are steady and unchanged throughout. We quote: Queen's Head, \$4.50 for 28 gauge; American, \$4.40 for 24 gauge; Bell brand, \$4.30 for 28 gauge; Gordon Crown, \$4.50 for 28 gauge.

TIN.—Prices continue to fluctuate, the tendency still being downward. We quote \$33 to \$33.25.

TINPLATES.—Prices are firm. A good demand is reported. We quote as follows: Charcoals, \$4.75 to \$5 and cokes, \$4.25 to \$4.50 per box.

COPPER.—Prices continue to decline, but there is no change on this market. Ingot and sheet copper are both quiet. We quote: Ingot copper, \$15, and sheet copper, \$21 to \$22 per 100 lb.

BRASS.—Unchanged in price and in good demand. Discount, 10 per cent.

LEAD.—The market is firm with a good business doing. We quote: \$3.50 per 100 lb. for pig lead and \$3.75 for bar lead.

IRON PIPE.—A brisk trade is doing. Prices are steady since the reduction in large sizes. We quote as follows: Per 100 ft.: Black pipe, $\frac{1}{8}$-in., \$3.25; $\frac{1}{4}$-in., \$2.40; $\frac{3}{8}$-in., \$2.65; $\frac{1}{2}$-in., \$2.85; $\frac{3}{4}$-in., \$3.65; 1-in., \$5.25; $1\frac{1}{4}$-in., \$7.35; $1\frac{1}{2}$-in., \$8.95; 2-in., \$12.55; $2\frac{1}{2}$-in., \$20; 3-in., \$23; $3\frac{1}{2}$-in., \$30; 4-in., \$36.

ZINC SPELTER.—The demand is quiet. Prices are steady at $6\frac{1}{4}$ to $6\frac{1}{2}$c per lb.

ZINC SHEETS.—We quote base price as follows: Cask lots, \$6.75 to \$7, and part casks, \$7 to \$7.25.

SOLDER.—In good demand. Prices are unchanged. Guaranteed half-and-half is quoted at 18 to 19c., and wiping 17 to 18c.

PETROLEUM.

The petroleum situation is much the same as last week. The market is very quiet. There is still cutting being done

WALTER GROSE, Selling Agent, Montreal.

Nicholson File Co.,
DOMINION WORKS, PORT HOPE, CANADA.

last week's quotations. We quote as follows: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 15½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less.

HIDES, SKINS AND WOOL.

The hide market is fairly active; prices hold firm. The calfskin market is quiet. Veal skins of all weights have dropped 1c. per lb. The wool season is just coming in now, and it is expected that there will be a very active market soon. Tallow has dropped ½c. per lb.

We quote as follows:

HIDES—No. 1 green, 8c.; No. 2 green, 7c. per lb.; No. 1 green, steers, 8½c.; No. 2 green, steers, 7½c. per lb.; cured, per lb., 8 to 8½c.

CALF SKINS—Veal skins, No. 1, 6 to 14 lb. inclusive, 9c.; No. 2, 7c.; No. 1, 15 to 20 lb. inclusive, 8c.; No. 2, 6c. Deacons (dairies), each, 60 to 70c.; sheep skins, 40c. to $1.10.

WOOL—Unwashed wool, per lb., 8 to 9c.; fleece wool, 14½ to 15½c.; pulled wools, super., per lb., 15c.; extra, 18c.

TALLOW—We quote 5 to 5¼ per lb.

OLD MATERIAL.

This market shows no change. Demand is only fairly good. We quote as follows: Heavy copper and wire, 11½c. per lb.; light copper, 10c. per lb.; heavy red brass, 10½c. per lb.; heavy yellow brass, 8½c. per lb.; light brass, 6c.; lead, 2½c.; scrap zinc, 3¼c.; iron, No. 1 wrought, $14 per net ton; No. 2 wrought, $5; machinery cast scrap, $16; stove plate, $11; malleable and steel, $7; old rubbers, 6¼c. per lb., and country mixed rags, 50c. per 100 lb.

MARKET NOTES.

Owing to an error several changes were not made in our "Current Market Quotations" this week. Attention is therefore drawn to the fact that "Monarch" horsenails have a discount of but 60 per cent., not 65 per cent.; building paper is 5c. dearer than the quotations given; rope, etc., should be ½c. higher than the prices on page 60.

NOTES.

The Northern Iron Works Co., whose entire plant was destroyed by fire three weeks ago, got their temporary plant in operation and commenced moulding again during the week. Their permanent new building is also under construction.

Merrick-Anderson Co., Winnipeg, are applying for letters of incorporation to take over the wholesale hardware and commission business carried on for 20 years by Merrick, Anderson & Co.

NOVA SCOTIA MARKETS.

Halifax, June 9, 1903.

THE wholesale hardware trade for the last week has been somewhat quiet, except for the filling of orders for haying tools and light sundries previously booked. The orders coming in from the territory covered are comparatively small, and there is a general feeling that trade conditions are not as satisfactory generally as could be wished. Except from the mining and manufacturing centres, the renewals are very much above the average, and what is somewhat worse, the banks are not as lenient in this respect as they were when conditions of trade were brighter.

* * *

Though the business men are not naturally inclined to look at things pessimistically, there is no getting round the fact that money is inordinately scarce throughout the country. What is the cause is not quite definite. Things have happened which point to the fact that the late decline in securities has had much to do with it. It is also quite evident that a great deal of money has been sunk throughout the country, in small as well as large towns, in marginal stock, which the holders had to sell even after having put up twenty or more points margin. Some failures in the province have already taken place which point directly to this fact. One fact is quite evident—that the bright prospects which prevailed in business three months ago are not now so promising, and many of the wholesale couses, in hardware as well as in other lines, are selling with extreme caution, following the course of the banks.

* * *

With good crops, however, the autumn may show a more promising state of business. The forest fires have done much damage, and the lack of rain has been a setback to the crops, but now that rain has come the situation is somewhat relieved and with a good day's rain the prospect of good crops may yet be assured.

* * *

The threatened strike of the carpenters, which was scheduled for June 1st, has not taken place. This has materially affected the hardware trade and the local demand for builders' materials is still unabated. There is also a light demand from many sections of the province. The retailers are still doing a fair business in supplies for spring repair work and report sales in other lines very satisfactory.

* * *

There is no material change in any line of hardware, and most lines remain firm. Turpentine has become much firmer and may be subject to an advance. Linseed oil is unchanged. In both of these there has been a strong demand, but present stocks will be about equal to the season's requirements. Cordage is firm, but at present is in light demand. R. C. H.

BRITISH COLUMBIA MARKETS.

Vancouver, B.C., June 6.

A MATTER of great importance to Canada, as well as to the Province of British Columbia, is the present system which has to be adopted in the handling of all metals partially refined from the ores of British Columbia mines. At present the only way these metals can be turned into commercial commodity is by shipping them to United States refineries to be treated. Thence they are returned to this port and shipped to eastern Canada to the metal manufactories, etc., for consumption. The silver-lead ores of the East Kootenays are shipped in immense quantities from the Trail and Nelson smelters to Vancouver, and from here they are sent by steamer to San Francisco, where they are refined at the big Selby Reduction Works. The refined lead is returned to Vancouver, again by steamer, and from here it is shipped to eastern Canada. The same proceeding is taken with the copper matte from the Boundary and other smelters. The matte is received in carlots and shipped to the Tacoma smelter, where it is turned into blister copper, the raw material which can then be turned into copper manufactures. The blister copper comes back from Tacoma to this port again, and is once more loaded on cars and shipped east.

Of course the shipments out of the country and back again, and the treatment at the refineries on the other side of the line are done in bond, but the long double transportation is all at the cost of the producer. The Canadian Pacific Railway benefits by the double rail haul from the Kootenays to the coast, but the lead bullion and the copper matte are both shipped out on United States bottoms and returned the same way, so that there is not the satisfaction of seeing a Canadian steamship company benefit from that portion of the transportation. The custom of the Canadian ores to the United States refining works is a factor in building these institutions up.

Recently the miners and business men of the interior of the province have been making strenuous efforts to urge upon the Dominion Government some change in the lead duties, which would encourage the refining of the bullion in the country, or at least give a fair competition with United States refined lead. Action is still awaited, and with great interest, for it means the life of the lead-producing camps of British Columbia. As the development of these mines could be vastly increased, it is manifestly a question in which the commerce of the Dominion as a whole is interested.

The copper industry is not in much better condition. There is, however, some prospect of the establishment of refining works in British Columbia, which will turn the matte from the smelters into blister copper within the Dominion. Could this be realized, and the same in the lead industry, it would mean little short of a revolution in conditions under which silver-lead and copper mining are at present carried on.

* * *

The local market in hardware lines is somewhat quiet at the present moment. Perhaps the most interesting feature just now is a temporary shortage in glass stocks. Nearly all the glass used on the Pacific Coast is imported direct from the Old Country by sailing vessels and freight steamers, but non-arrival of expected large shipments has caused a demand which the trade cannot meet. The large quantities of glass used in putting up sash stock for shipment to the Northwest and Manitoba make this staple an important one in industrial lines in British Columbia. Building operations, too, have been so active for several years past that local consumption is very heavy. Very seldom, indeed, are shipments of glass received overland, the long rail haul making it out of the question to compete with the cheaper method of bringing it by sailing ship from Europe. Of course, the latter means that dealers have to order in large quantities and a long time ahead, practically a year's supply at once.

* * *

Quite recently, one of the largest firms of glass manufacturers in England, Pilkington Bros., of St. Helens, have opened a warehouse in Vancouver. They have now on the way to this port some heavy consignments of all lines of glass and glass goods. It is the intention to carry such a stock that the wholesale trade in the West will not have to order from England or carry a large stock. This well known firm manufactures polished plate, plain and bevelled mirror plate, as well as window, picture and car glass. They have a glass manufactory at Maubeuge, France, as well as at St. Helens.

* * *

Local building trades are at present somewhat handicapped by a strike or walkout of the employes in all the sash and door factories and planing mills. The trouble was caused by the refusal of the manufacturers to accede to a demand for a nine-hour day. The employes, who are all in the skilled labor class, belong to the carpenters' unions, which not long ago obtained an 8-hour day with a wage schedule of 40 cents per hour. The factory hands concluded that they should have at least a nine-hour day, the time heretofore being ten hours per day. Had it not been for this, there was a very prosperous season ahead for all building trades, and for dealers in builders' supplies. As it is the amount of construction under way is satisfactory, but unless a settlement of the trouble in the shops is reached, it will seriously interfere with much more being undertaken.

* * *

The outlook for the shingle trade was discussed at a meeting of the B. C. Lumber and Shingle Manufacturers' Association yesterday. Not long ago it was decided to knock off the night shifts in all shingle mills operating the full twenty-four hours, this being necessitated by over-production and a lull in expected demand for shingles from Eastern Canada and from the Northwest. The reduction cut off at least 25 per cent. of the output per day, some of the mills only having been running a single shift before. Conditions not having improved in the eastern markets, it has now been proposed to cut down still further. The intention is to shut down all the shingle mills in the association for a time. Another meeting is to be held shortly to come to a decision in the matter.

GEO. S. B. PERRY.

THE "RAPID" AUGER BIT.

H. S. Howland, Sons & Co., Limited, Toronto, call the attention of the trade to the "Rapid" auger bit, now offered for sale by them. Its great points are its speed and ease in working. It is claimed that in a recent test the "Rapid" bored 1¾ in. in twelve revolutions, as against from 11 16 to 1 1/16 in. by four other bits in the same number of revolutions. This bit is sold separately or in sets.

INDUSTRIAL GOSSIP

THE output of steel for The Domin ion Iron and Steel Company for the month of May was 14,500 tons, an increase of 2,500 tons over the previous month. The output of pig iron was 17,800 tons, a considerable increase over the April output. In the last two weeks of May the output of steel amounted to 9,000 tons, this being at the rate of 18,000 tons for the month.

• • •

The Lake Superior Dry-dock Company, Limited, Toronto, with a capital of $1,000,000, have been incorporated with the following directors: R. H. Paterson, S. C. Wood, jr., Thos. Reid, solicitors; C. H. Hunter, accountant; R. G. Agnew, law student; W. G. Francis, merchant; Eva M. Gardiner, all of Toronto. The company's charter permits them to carry on business as a general dry-docking, shipbuilding, and freighting company, and to develop power of all kinds.

NOTES.

A big strike of copper ore is reported at Cheticamp, Cape Breton.

D. Hibner & Co., Berlin, Ont., intend adding a 47 x 250 ft. three-storey extension to their factory.

The Sarnia Gas and Electric Light Co., Limited, have been empowered to increase their capital stock from $75,000 to $250,000.

The Wiarton Cement Co., Limited, Wiarton, Ont., are being delayed in the erection of their building by difficulty in securing steel.

J. E. Cooper, of The Goold Manufacturing Co., Seneca Falls, N.Y., is installing a new pump at the Sherbrooke, Que., pumping station.

The International Harvester Co. of America, implement manufacturers, incorporated in Wisconsin, U. S., have been licensed to do business in Ontario.

F. Counsell & Son, Hamilton, Ont., are adding a general blacksmithing department to their business, and they intend to make wagons, sleighs, and cutters.

The Manitoulin Ranch and Lumber Co., Wisdsor, Ont., have been incorporated; capital, $200,000; provisional directors, J. S. Lovell, Wm. Bain, Robert Gowans.

Vancouver papers state that important discoveries of coal and oil have been made on Queen Charlotte Islands, B.C., by Wm. Hogan and A. McDonald, two Ontario prospectors.

The National Business College, Limited, Port Arthur, Ont., has been incorporated, with $25,000 capital; directors, E. J O'Sullivan, S. W. Ray, C. W. Jarvis, J. E. McKibbin and J. R. Roaf.

Harding and Leathorn, who constructed the waterworks extension at Aylmer, Ont., have secured the contract for the Strathroy waterworks, which are to cost between $30,000 and $40,000.

E. E. Armstrong, clerk of Parry Sound, Ont., is asking for tenders by Monday next for the construction of two concrete piers and abutments for a steel bridge over the Sequin River at Parry Sound, Ont.

Empire Soap and Oil Company, Limited, Toronto, have been incorporated with $40,000 capital to manufacture soaps, etc. The directors are J E. Hoare, Philadelphia, George Dickson and F. N. Vanzant, Toronto.

The Midland Construction Company, London, Ont., have been incorporated; capital, $250,000; provisional directors, Angus McKay, F. G. Rumball, Robert McEwen, Thomas E. Robson, A. E. Welch, T. H. Luscombe.

The Central Construction Company, Toronto, have been incorporated; capital, $500,000; provisional directors, .F M. Geale, D. M. Mossom, Sarah A. Elliott, of Toronto; to do business as railway construction company.

Allan H. Royce, representing The Toronto Street Railway Co., states that the company's line from Toronto will be built as far west as Oakville by winter if a satisfactory agreement is made with the municipalities along the way.

The Berlin Interior Hardwood Co., Limited, Berlin, Ont., have been incorporated with $40,000 capital, to manufacture furniture and interior woodwork; directors, Hartman Krug, J. A. Lang, Peter Hymmen, W. T. Sass, Horner Ford.

Telephone City Stoves, Limited, Brantford, Ont., is the style of a company incorporated with $40,000 capital to manufacture and sell stoves, ranges, furnaces, etc. The directors are Henry Yeigh, J. B. Turner and E. J. Kerr, of Brantford.

The Dominion Creamery Company, Limited, Ottawa, have been incorporated to carry on dairy and cold storage business; capital, $100,000; provisional directors, J. D. McCann, J. J. McCann, W. J. Elligott, Peter McVeigh, Thomas F. Sullivan.

The Masonic Publishing Co. of Toronto, Limited, have been incorporated with $10,000 capital to acquire and publish The Masonic Sun. The directors are Wm. C. Wilkinson, D. F McWatt, W. H. Shaw, Wm. Roaf, H. T. Smith and John H. McKinno n

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion, 1c. a word each subsequent insertion, cash in advance. Letters, figures, and abbreviations each count as one word in estimating cost.

SITUATIONS VACANT.

A GOOD hardware salesman. Apply by letter only, to H S Howland, Sons & Co., Limited, Toronto. f

BLACKSMITH — Good floorman; good wages and steady work. Honey & O'Hara, Stratford. f

BLACKSMITH—Immediately, plow and pump work and repairing; to a temperate man a steady job. Lewis Miller, Jarvis, Ont. f

WANTED — Man capable of running planing mill machinery and getting out custom orders; must be good wood turner. Address Box 428, Dresden, Ont. f

FOR SALE.

HARDWARE BUSINESS. (old established) in rapidly growing town of Collingwood, Ont., owner retiirng. Apply to J. Henderson, Collingwood (21 5)

SITUATION WANTED.

HARDWARE salesman desires position; Western Ontario preferred; eight years' experience; first-class reference, Box 848, Globe. f

RELIABLE young man with six years' experience, desires situation at once in hardware. Box 35, HARDWARE AND METAL. (24-tf)

PAINT, OIL AND BRUSH TRADES

NEW TYPES OF BRUSHES.

IT is only by keeping in touch with developments can any merchant hope to keep up to date. In brushes alone there are enough new goods coming on the market, says an exchange, to be worthy of attention.

Special new brushes are at hand for the spring house cleaning, one of the latest being the flat, keen bladed brush designed expressly for getting the dirt out from between the pipes of the steam heater, which effort has hitherto been a temper disturber for both mistress and maid.

The billiard table has now its special brush for cleaning without damage to the baize lining. The five o'clock tea table has a special silver-handled brush to defend it from crumbs without marring the mirror-like surface. The refrigerator has a brush made after its own needs. There are special brushes for special sorts of upholstery. And there is a new brush just come to clean the slats of window blinds cleverly and deftly.

Brushes are now made so pliable and gentle in action and of such wear resisting quality that they take the place of the cleaning cloths formerly used. For instance, there is the carafe and decanter brush, the marble brush, the tumbler and goblet brush, the window brush, the dish washing brush and the brushes for pantry use that are more satisfactory and more conveniently kept than most cloths and other cleaners.

These various brushes are of felt, chamois, hair, sea root, tampico and many grades of bristles and vegetable fibre. Different foreign nations have contributed to the array.

The tribe of feather dusters is multiplied amazingly and varies from the extra soft piano or bric-a-brac duster of fine ostrich feathers and the tender yet effective carriage duster, to the ordinary hearth and mantel duster. There is a specially fine picture duster of turkey feathers and an elongated feather duster for reaching up to cornices.

Furniture polishing brushes come round, square, triangular, many fingered, answering well for the human hand. Silver cleaning brushes constitute a family of themselves. And floor waxing brushes and floor rubbing brooms are contrived so as to be worked either by hand or foot.

There are special beaters for rattan furniture, chamois covered so as not to abraid the surface. Clothing beaters are in wide variety, and for each description of rug there is a particular beater designed to oust the dust from the weave with the least hurt to texture and the utmost convenience to the housemaid.

TURPENTINE ADULTERATION.

EVIDENTLY there is as much adulteration of turpentine and linseed oil in the United States market as in the Canadian. A correspondent of The Metal Worker writes to that paper asking, on account of the frequency of such adulteration, for a recipe for testing these liquids. The answer made is the same as the advice given by "Hardware and Metal" some weeks ago, namely, that the safest way to save one's self from such adulteration would be to buy only from reputable houses; that the only sure method of detecting adulteration would be by chemical analysis, so the dealer should insist on a guarantee of purity from the jobbers he gives his order to.

VARNISH MAKING IN GERMANY.

ACCORDING to The Farben Zeitung, it is no longer the fashion for the varnish manufacturer to deal with raw materials only. He buys quantities of products made in special factories, which although not varnishes, are not raw materials, and may be regarded as intermediate bodies, by the use of which the making of varnishes can be carried out more quickly and with less capital sunk in plant.

Among these auxiliary bodies we may name hard resins and esters, dry preparations and so-called solid siccatives, and also those thick and viscid masses, of which the name is legion, that make it possible by the simple addition of oil of turpentine and heating to from 130 to 140 deg. C. to make varnish which takes a highly satisfactory place with reference to quality. These latter preparations do away with the necessity of running copals, a difficult task which involves great danger of fire and annoyance to the neighborhood. Hard resins and esters, dry preparations and varnish extracts, are made by many firms, but the products of all the factories are not equally satisfactory. Many of them make varnishes which refuse to dry, while the same bought from another firm may be satisfactory in every way.

With regard to the dry preparations the following points should be carefully examined by a prospective purchaser by means of a sample. They must dissolve quickly and easily in linseed oil or oil of turpentine, and must not cause any precipitation, which would of course make the varnish unsalable. The varnish made with them should also dry in a reasonable time, say from ten to twelve hours and not again turn sticky. Turpentine siccatives should dry in from 15 to 20 minutes, and should combine easily with pigments.

A NARROW ESCAPE

The Montreal Gazette of June 5, contained the following bit of news of a gentleman well known to readers of HARDWARE AND METAL:

"Yesterday morning, about 8.45, as Mr. W. H. Evans, of the Canada Paint Company, was waiting at the east side of the Atwater avenue crossing of the Grand Trunk Railway, the gates being closed for a train from the west, he was astonished to see an elderly man deliberately go under the gate and attempt to cross while the train was actually at the west end of the avenue.

"The gateman was at the crank, also at the east side of the street, and seeing the old man's danger yelled with fear. Mr. Evans jumped at the man and, seizing him by the collar, hauled the silly fellow out of danger.

"There were a goodly number about at the time, who seemed to be transfixed with fright at the incident, and as Mr. Evans turned the trembling habitant over to the gateman he kept muttering 'Mon Dieu, mon Dieu, merci beaucoup.'

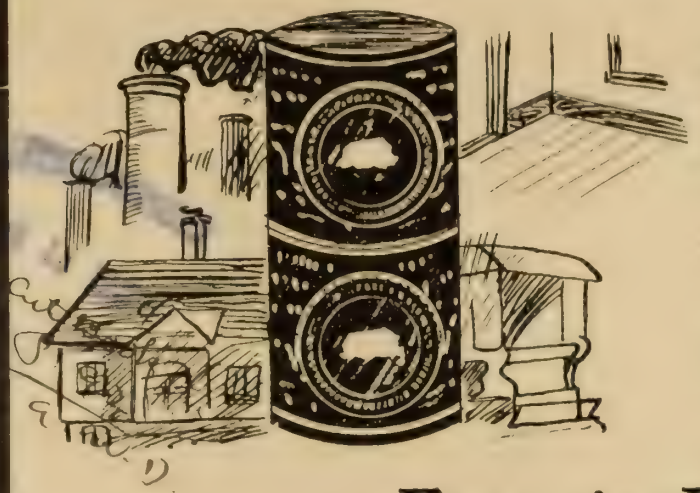
"Mr. Evans, who has travelled for a number of years, vows that in all his experience he never saw such a narrow escape."

PAINT AND OIL MARKETS.

TORONTO.

All staples are quiet, but there is still a big movement in sundries. Prices are unchanged throughout. Turpentine is scarce on the local market, but as prices are steady at low figures at Savannah, the feeling here is easy. The linseed oil situation has weakened, prices being cut by some houses. White lead is steady, as are, in fact, all lines. We quote:

"ARK BRAND" PAINTS ARE ADAPTED FOR EVERY USE.



Dealers can safely recommend "Ark Brand" Ready Mixed Paints for all uses to which paint is put and the result is sure to be a pleased and satisfied customer. Being adapted to all purposes and embracing a full line of colors, "Ark Brand" Paints are in themselves a complete line with which to meet all trade requirements.

Backed by our guarantee to refund the purchase price in case of any dissatisfaction arising in their use, "Ark Brand" Paints offer an attractive line for dealers.

We have a special offer to make regarding "Ark Brand" Floor Paint, which is the greatest trade getter and keeper on the market.

CARPENTERS' STRIKE STILL ON

The employes of a number of the sash and door mills in Montreal are still out on strike, and if the mill owners stick by their resolution to confer only with their employes and not through the officers of the International Union, the situation is likely to be prolonged for some time. The Council of the United Brotherhood of Carpenters and Joiners has issued a circular in support of their side of the strike, which they have sent to all contractors and labor unions. The circular announces their intention of keeping up the struggle until their demands are acceded to, and calls upon other labor unions for their "moral support."

The mill owners, on the other hand, have signified their willingness to meet and of their employes who are out on strike, and endeavor to arrive at some agreement. Before dealing with the International Union's delegates they say that the union must be registered in Canada.

ENERGY AND FORCE.

It is a law of nature that there is no energy lost, that force produces force. Put energy and force into your business. Success is impossible without those qualities. Put energy and force into your advertising and it will bring results. Put energy and force into your window dressing and the display will attract custom. Keep your business living, not existing.

Your business must either be going forward or backward. If backward, arrest it.

"Impossible," you will say. Have you tried? Make "impossible" as infrequent a word in your vocabulary as possible.

Energy and force are large stones in the foundation on which success is built.

HARDWARE NOVELTY.

THE

Ingersoll

American Watches.

RETAIL PRICES, **$1.25 to $2.50**

ARGUMENT.

We now offer a practical time piece for the Hardware Trade of Canada, and base our statement upon the following:

First—It is absolutely guaranteed to keep accurate time.

Second—It stands rough usage and does not get out of order easily, making it the only watch for dealers outside of the jewelery trade to handle, and also making it a practical one for sportsmen, boys and all men who give a watch hard usage.

Third—Its low price and high quality insure a tremendous sale, which we further augment by furnishing many handsome advertising devices for your store.

Fourth—Last but not least, these watches offer a handsome profit. Price cutters are not supplied.

Sold by several leading Hardware Jobbers of Canada. We will tell you who they are upon request.

Trial Offer—To any Hardware Merchant who will write to us upon his business letter head and inclose 75c. we will send a sample watch (duty not paid) and our catalogue, so that he can test its accuracy and durability.

THE OFFICE

DEVOTED TO THE OFFICE STAFF OF BUSINESS ESTABLISHMENTS.

IS IT NECESSARY TO SEND RECEIPTS?

BY J. H. SCALES.

THE question of "the discontinuing of sending receipts in acknowledgment of all forms of remittances, upon which the endorsement of the receiver would be a legal receipt," seems to be one upon which little can be said, certainly little that may be termed new.

This question was taken up by the house I have the honor to represent nearly two years ago. It had been our custom for some time previous to print on our remittance forms: "No acknowledgment necessary." Having experienced no inconvenience from the practice, we concluded it could be extended to our own customers, and so decided to try it.

I believe we were the pioneers in this move, and now, after 21 months of actual experience we are convinced that it was a move in the right direction. So successfully has it worked that I have yet to see the first complication to arise from it, and you can get an idea of the great saving of labor and postage to us thereby when I tell you that we acknowledge the receipt of less than 10 per cent. of the remittances that come to us.

However, it is impossible to eliminate altogether the formal receipt, for it must be given in some instances, such as formal vouchers required by corporations, settlements with administrators, receivers, etc. It is also our custom to acknowledge receipt of currency when the amount exceeds $1, and, if a customer insists upon it, we send him receipts regularly. In other words, if the question of business or no business hangs upon a receipt, we send the receipt.

As another proposition, the present era in commercial life demands the introduction of the most modern methods and the discarding of all practices which are unnecessary or cumbersome, so long as it does not interfere with or retard the progress of business; in other words, that we take the shortest cut to reach a given point, and this principle applies to the credit man as well as to any department, for he must see to it that the machinery of his department works with the least possible friction and that the expense does not compare unfavorably with that of others, and, as we have already shown, the abolition of the sending of receipts, though comparatively small, is one feature that counts

At this point I will digress to say I think it would be well to incorporate some other features which are of a kindred nature, viz.:

First.—Insist upon the customer remitting for specific charges.

Second.—Urge him to use a regular remittance form or make an intelligent statement of the remittance in his letter, and then let him specify on his cheque the invoice it is intended to pay.

The third feature will require some explanation.

When this subject came up for discussion at the meeting of the National Association of Credit Men of the United States, there was an objection offered on the ground that the discontinuing of the sending of receipts would induce a customer to send his individual cheque instead of exchange.

When paid and cancelled the customer's cheque goes into his possession and can be kept as a record, but the cashier's cheque, of course, remains with the bank: therefore, if he has not the receipt, it is only natural that he should want his own cheque properly endorsed.

This can be overcome by suggesting that the customer buy exchange in his own name, and then endorse it over to the firm he intends to pay, specifying, if he chooses, in the endorsement the bills to be paid. Then, should any question or dispute arise, which is exceedingly doubtful, it is a matter of little trouble to obtain a complete history of the transaction by going to the records of the local bank.

PERSONAL INTERVIEWS IN GRANTING CREDITS.

BY GEO. H. SHEBLE, ST. LOUIS, MO.

THE position of credit man in a large concern is not a sinecure, and at times is most unpleasant; in fact, I have had gentlemen in other positions not nearly so prominent tell me that they would not have the place with many times their present salary attached; and I assure you that I recently had two experiences when I wished I was almost anywhere else in the world but at the credit desk. I was informed that a young lady, daughter of one of our customers, was in the house purchasing goods. Now, this customer was considerably behind in his account with us, and, supposing that the young lady had been given instructions, I sent for her and upon questioning her found out that she kept her father's books and was well acquainted with his affairs, but was not inclined to tell me anything about them, till I so positively insisted that she became offended and would say nothing.

The other case was somewhat similar, the lady being the wife of a customer, and upon being questioned felt so much offended that she set up a good "cry," and then, being somewhat relieved, said that her husband, though his account was so far behind, was well able to pay, but that he gave the business very little attention, leaving it almost entirely to her. She, between her sobs, instructed me not to ship the goods she had just purchased—she did not need them, anyhow, and could get them somewhere else when she got ready for them.

Now, such cases as these, I say, are anything but pleasant, and I hope none of you may be called upon to go through them.

The credit man's duties are multifarious, he having many things to do beside pass upon the fact that a prospective purchaser is good to sell upon credit or not. You know, it is often deemed necessary for you to go out of your office to meet a customer, accidentally, as it were, to "jolly" him—pat him on the back—make him feel at home—take him to a department and call some particularly good salesman to handle him, because you know he likes this special attention, or is "cranky" in some way—and in many other ways depart from your legitimate line of work.

One of my most unpleasant duties is to decline an order or "turn down" a buyer; for this, in most cases, "puts you in bad" with the salesman who would get credit for the sale, as he, nine times out of ten, thinks you are wrong—that you have made a mistake—though this is more on account of a prejudice he always has in favor of the customer, as he looks at the transaction from one side only—a salesman's standpoint.

You must not harbor the idea, however, that the credit man is never in error, for he, being human, is naturally liable to mistakes and often makes them, for if he did not his services would be invaluable to his employer; in fact, he would be so much sought after that he could not take care of the many positions that would be offered him.

There are so many conditions to be considered in the granting of credit, more in fact, than I have time to take up here, that I will not enumerate the cases that have come under my personal observation or attention.

AUER LIGHT CO., - MONTREAL.

HEATING AND PLUMBING

Power and Electric Light Plant of the King Edward Hotel.

THE electric lighting and power plant of the King Edward VII hotel, Toronto, is far from being the least interesting portion of the modern equipment of the concern. Its extent may be expressed in some degree by the statement that the electric generating plant has a total capacity of 150 kilowatts, supplying 4,680 incandescent lights, five electric elevators, three dumb waiters, three ventilating fans, one laundry motor and four minor motors. It might be mentioned that the hotel building is 200 x 160 ft., nine storeys high, of fireproof construction, having steel columns and beams, terra cotta walls and concrete floors.

The engine room is located in the basement at the King street end of the building. There are four high-speed automatic cut-off slide-valve engines, built by The Robb-Armstrong Co. The engines are placed on a solid concrete foundation, having an average depth of 5 ft. Each of them is directly connected with a direct current 240-volt compound wound Canadian General Electric dynamo, multipolar type, two of the generators being of 150 killowatts, one of 100 and one of 50. There are also two dynamotors of 25 killowatts each. These are used to balance the load, as the building is wired on the three-wire system, using 115-volt lamps. It was decided to adopt this system on the recommendation of the architect for several reasons. Had 110-volt generators been put in for lighting and 240-volt generators for power it would have required a spare generator for each voltage and two machines would have to be run day and night, no matter how light the load might be, while with the present system one generator only is required to carry the all-night and morning load, and when the elevator traffic gets heavy, one generator supplies the power busses and the other the lighting busses. This arrangement also admits of the whole building being supplied by The Toronto Electric Light Co., both for power and light. A service from the company's mains has been put in and connected to the switchboard for this purpose, so that in case of a serious breakdown in the boiler-room the whole load or any part of the load can be transferred without a moment's delay.

The switchboard is of white Italian marble, 2 in. thick, is built in eight panels, each 4 x 7 ft., and supported at each end by a solid square marble fluted column, and at the base by seven solid ornamental cast brass legs, 16 in. high, the space between the legs being filled with a neat polished brass grille. The lower and upper edge of the board is finished with a polished brass border 5 in. wide. The switch-board rests on a concrete platform, raised 12 in. above the engine-room floor. The platform floor is laid with tile and has a border of polished marble 12 in. wide. It is also faced with marble and has marble steps. The length of the board is 34 ft. and of the platform 40 ft.

On the first panel to the left is mounted the high and low pressure steam gauges, pressure recording gauge, vacuum and water gauge; the second panel is devoted to the power feeders; the third and fourth panels serve to control the four generators.

The generator panels are supplied with two sets of bus bars, the upper set of bus bars supplying current to the feeder switches on the power panel and the lower set of bus bars supplying the feeder switches on the lighting panels only. Each generator connects with two triple-pole knife switches, the right hand switches connecting with the lighting busses, and the left hand switches with the power busses. By closing both switches the generator supplies both sets of bus bars. A single pole electric magnetic circuit breaker is placed in the negative leg of each machine, between the main switch and the generator. Each machine is supplied with an ammeter; a voltmeter and a differential galvanometer are also located on these panels. By means of a multiple-point rotary switch the voltmeter may be connected to any one of the four generators, the power bus bars, the lighting bus bars and to ground. The galvanometer is a special voltmeter, with two coils having equal resistance and number of turns. The instrument is adjusted and the scale made with the zero position in the centre.

By means of the multiple-point galvanometer switch one machine may be connected to one of the coils, and either of the other machines may be connected to the other coil. If the machines have an equal voltage the needle will remain at zero; if the voltage of one machine is different from the other, there will be a deflection, and the machines have to be adjusted until the needle returns to zero. When this is done the generators may then be thrown in multiple. By the use of the galvanometer mistakes are less apt to occur in throwing machines in multiple than with the voltmeter.

On the next panel to the right are mounted all the appliances for controlling the two balancing sets.

As there are many points in favor of this system for private plants using power and light over that of having separate generators for 250 volt and 110 volt, fewer generators are required to be installed, as one machine can be used in place of two for at least 12 hours in each 24, and at a better efficiency, thereby saving considerable in fuel, while the cost of copper for wiring is much less.

As this is the first plant using this system in Canada, it might be of some interest to describe how the balancers act. Each set is supplied with a double pole knife switch, a single pole knife switch, two field rheostats, one armature rheostat, two voltmeters and one ammeter with zero centre reading to 300 amperes each side. Each set is simply two 12½ killowatt, 125 volt, compound generators mounted on one sub-base, having their armature shaft rigidly coupled together. The armatures are connected in series across the positive and negative busses through the double pole switch, a tap is taken from the connection between the two machines to the neutral bus through the single pole switch. The shunt field of the machines is also connected in series, but a connection is made from the neutral wire to centre between the two field rheostats through a small single pole knife switch.

In starting, it is only necessary to close the double pole switch, cut out the armature resistance, and when the machine is up to speed, close the small switch between the field rheostat and adjust the voltage before closing the neutral switch. The feeder switches may then be closed. Should one side be heavier loaded, the machine connected to the light side will take current from the line as a motor driving the other as a generator, which will deliver current to the

VARNISH REMOVER

PAINT REMOVER

Anybody and everybody wants something sometime that will take off Varnish or take off Paint. Burning off is dangerous and unhealthy; Rubbing off or Scraping is slow and unsatisfactory.

VARN-OFF

takes it off "while you wait," and a short wait; takes it off clean, without injury to the wood, without injury to the hands or anything it touches, (except the varnish or paint !) no unpleasant odor, easy to work, and a nice profit to the dealer—a sample for the asking.

AUER LIGHT CO., 1682 NOTRE DAME ST., MONTREAL.

...ected to loaded side. This action is per... automatic from one side to the ...ther as a load shift. The machine re... ...ires no more attention than any other ...ration. On this panel there are also ... ...ingle pole circuit breakers, two ... recording voltmeters, and a s...e ... voltmeter switch for adjusting the ...ltage of the two balancing sets.

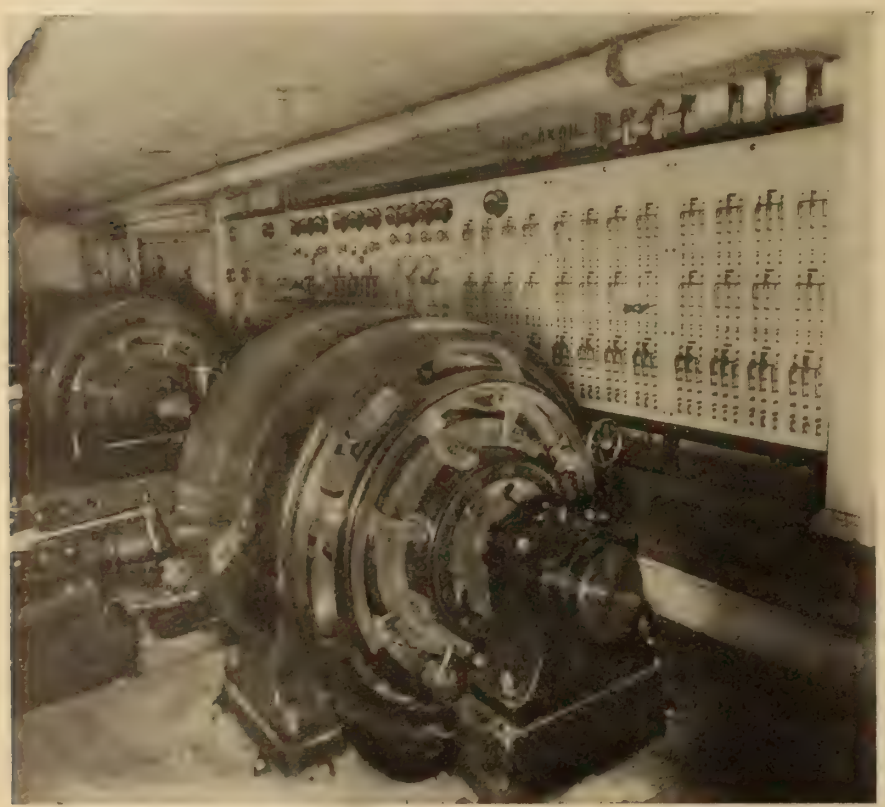
The sixth, seventh and eighth panels are devoted to the lighting feeders and are equipped with 36 triple pole double-throw knife switches; the power panel has 12 double pole knife switches, also double throw, and four circuit breakers on the passenger elevator circuits. It was considered better practice to put in double-throw switches on each circuit, as in case of a breakdown the shifting of the load on to the Electric Light Company's service would not interfere with their system, as it might do had the load to be shifted by means of a service switch, and if at any time the load was over the capacity of the machine running, part could be transferred without the necessity of starting another machine. Two ammeters, one on the lighting panel, and one on the power panel, measure the total load.

Altogether the switch-board is said to be one of the most complete ever installed.

The wiring throughout the whole building is placed in steel conduits, the feeders from switch board leading to distributing cabinets, in which are placed polished slate panel boards with all copper connections mounted on face. Each board circuit in the principal rooms are controlled by knife switches, also located on panel board. The lights in the rotunda, entrances and office are all controlled from a panel board at main office. The restaurant and cafe lights are controlled from panel board in serving room. The dining-room and banquet-room are also controlled from separate panel boards. The ceiling lights in corridors are controlled by push switches, as is also each pendant outlet in bedrooms.

There was used in this installation, 100,000 ft. of conduit and 220,000 ft. of copper wire. The wiring was done to supply 4,600 lamps at less than 2 per cent. loss.

The whole of the electric installation, with the exception of the generator and engine was put in by The Bennett & Wright Co., Limited, under the direction of G. Kay, their electric superintendent, to whom we are indebted for this complete description of the system.



GENERATORS AND SWITCH-BOARD, KING EDWARD HOTEL.

TORONTO PLUMBERS' BALL TEAM.

A meeting of the members of the Toronto Master Plumbers' Association who are interested in baseball, was held on Friday last. There were two nines selected to uphold the name and fame of the association on the diamond. Frank Maxwell, of Maxwell & Johnston, was appointed captain. Frank is a proud man; he thinks his team is the only one. Arrangements have been made to meet for practice on Saturday afternoon next at the Woodbine. Full arrangements are being made to care for the wounded. George Clapperton, of The Bennett & Wright Co., Limited, is the secretary of the team, and all challenges sent to his address will receive due consideration. One at a time, please. A challenge is being issued to the Mountain (Hamilton) Association, to meet on neutral grounds at Oakville, when the two associations have arranged the joint picnic there.

A FORMER MASTER PLUMBER HONORED.

Members of the plumbing fraternity are occasionally elected to positions of honor and trust by their fellow citizens. They are found on the council boards of our towns and cities. The recently elected president of the London Board of Trade, John R. Minhinnick was formerly engaged in the plumbing business and is still interested in the trade, having recently helped to organize the Empire Manufacturing Co., of London, for the extensive manufacture of plumbers' and steamfitters' supplies and specialties in brass goods. Mr. Minhinnick was born in the town of Tavistock, Devonshire, England, 65 years ago, and has been for over 30 years closely identified with the London Board of Trade, which is to be congratulated on having a gentleman of such wide experience at the head of affairs.

TORONTO ASSOCIATION MEETS.

The regular meeting of the Master Plumbers' Association was held in their rooms, 21 Richmond street west, on Monday evening, June 8. There was a very large attendance of members present and great interest was manifested in the success of the association. A. E. McCauley was initiated. The various committees presented their reports. The selection of delegates to attend the National Convention was left over until next meeting.

SYDNEY PLUMBERS ORGANIZE.

The organization of the master plumbers and steamfitters of Sydney, C.B. and vicinity, into an association is now an established fact. The inaugural meeting was held in the Sydney hotel on the evening of June 2. Frank Powers, of Lunenburg, N.S., president of the National Association was present and delivered an address of great interest and profit to the new members. Much enthusiasm was displayed, and the association bids fair to be one of the best locals in the Maritime Provinces.

The following firms identified themselves with the new association: Bayer & Co., Baristo & Co., H. G. Hagen & Co., Estans & Co., E. L. Martin, Chas. Kirk, J. J. Brownlee, Keith Ball, F. H. Jones, all of Sydney; and Thompson & Matherson, Shean Bros., Will Buchanan, of North Sydney, and Keith Bros., of Glace Bay.

After the routine work of organization had been completed, the following officers were elected: President, L. Estans; vice-president, Frank Bayer; secretary, H. G. Hagen.

The association should be of benefit to the trade, especially if the craftsmen can retain confidence in each other. This is the only cement that will effectually bind men together.

BUILDING NOTES.

REPRESENTATIVES of the Horticultural Society waited on the Sub-Committee of the Parks and Gardens Committee to urge the erection of a pavilion in Allan Gardens, Toronto, in the place of the one destroyed by fire. The committee decided to recommend that a pavilion to cost between $40,000 and $50,000 be erected. There is over $20,000 of insurance towards the building.

Elgin, Ont., is experiencing a building boom.

The Grand Trunk will spend $15,000 in extensions at Berlin, Ont.

Geo. Rumpel will erect a $10,000 rink in Berlin, Ont., this summer.

A new $10,000 hospital is to be built at Rat Portage, Ont.

Plans are being prepared for the erection of a furniture factory in Collingwood, Ont., in the fall.

Toronto carpenters and painters are still on strike, and much building is being delayed in consequence.

The Presbyterians are erecting a new church on the corner of St. Clair avenue and Vaughan road, Toronto. The corner stone is to be laid on June 13.

Fraser Bros., millwrights and contractors, of Strathcona, N.W.T., are building an elevator for the Dowling Milling Co. in Edmonton on the mill premises.

G. A. Perrier, of Crump & Perrier, secretary of the National Association, has been laid up at home sick, but the craft will be glad to know that he is able to be about again. Mr. Perrier reports his firm are very busy.

Kemptville, Ont., Town Council are negotiating with M. E. Connor, of Waterloo, Ont., to establish a felt factory. Other manufacturers are said to be looking to Kemptville as a suitable place to locate. This interest in the town has been established since the installation of an electric power system.

The National Association made no mistake in holding its session last year in Halifax. At former conventions there were not more than one or two delegates from the Maritime Provinces. Secretary Perrier reports that Halifax Association will be represented by no less than five at the forthcoming convention in Montreal, and the motto is: "This must be the Banner Convention."

PLUMBING AND HEATING NOTES.

The Montreal Pipe Foundry Co., of Londonderry, N.S., successfully cast the first lot of water pipes on May 28, the cast consisting of 100 pieces of different sizes. The works are not yet finished, and will be added to and the output increased until the largest output ever made at Londonderry will be exceeded. Some 25 or 30 laborers are needed there at once.

There is no change in the situation in regard to the strike of plumbers. The men are still out, and the masters will endeavor to secure help from outside points if the men do not return to work. —Sherbrooke, Que., Examiner.

John Watson, of Montreal, was in Toronto on Tuesday of this week, on his way up to Hamilton to attend the annual convention of the Canadian Order of Foresters. Mr. Watson was taken in hand by President Mansell, and his short visit was fully taken up renewing old acquaintances. He reports business in Montreal to be rather demoralized owing to the recent labor strikes. Now that the strikes are settled, it is expected the season will be brisk.

A meeting of the Master Plumbers' Association was held on Monday evening this week, when a committee was appointed to arrange for the reception and entertainment of the delegates to the National Convention. The members are determined to make this one of the best meetings held by the National.

A NEW BUILDING BY-LAW.

The Committee on Buildings of the Council of St. Louis, Montreal, has reported a new building by-law affecting residential and business streets alike. The by-law provides that all new buildings on St. Lawrence street must be of pressed brick or stone and three storeys high at least; they are also to be built on the line of the street. It is expected that a regularity in design and construction will thus be brought about in the great number of business and residential buildings which are to be erected when the land for widening the street has been expropriated. In the new residential streets to be opened up the houses are to be built ten ft. back from the line of the street.

STOVES AND TINWARE

PEAT AS A FUEL OF THE FUTURE.

THE Ontario Bureau of Mines have issued, under the direction of Thos. W. Gibson, a comprehensive report on the manufacture and use of peat fuel. In reviewing the present situation the bulletin points out that in Ontario approximately 2,900,000 cords of wood are burned each year, the first cost of which is averaged at $1.50 per cord, making the value of wood burned in the province each year over $4,300,000. Regarding coal, the bulletin says: "The imports of anthracite coal into Ontario during the 12 months ending June 30, 1902 (the last fiscal year in which imports were classified according to provinces) were 1,075,440 tons, valued at $4,406,231, and of bituminous coal for home consumption, 2,362,115 tons, worth with the duty added $5,357,373. The quantity of coal brought from Nova Scotia in a normal year is so small as to be hardly worth taking into account, consequently the imports of anthracite and bituminous coal may be regarded as covering the total consumption. Adding then the several items together, and leaving out of consideration petroleum and natural gas, which have a restricted use for fuel, we reach the following as representing the fuel bill of the people of Ontario for a year:

	Value.
Anthracite, 1,075,441 tons	$4,406,331
Bituminous coal, 2,362 115 tons	5,357,373
Wood, say, 2,900,000 cords	4,350,000
Total	$14,113,604

While peat is a comparatively new fuel in Canada, it is pointed out that in Europe it has been used for centuries and that the demand continues to grow steadily for, in addition to domestic purposes, use in steel and glass furnaces, generating electricity, etc.

Coal, the bulletin points out, "is the standard by which any competing fuel must be measured, though there are substances which for special purposes are equal or superior. Some petroleums, for instance, give better results in locomotive or steamship boilers, costing less and occupying smaller space for the quantity required to produce a given amount of power. Charcoal from wood makes a better product in the iron blast furnace than mineral coke, because of its greater freedom from sulphur, which deteriorates the quality of the pig.

"The comparison of peat with coal must be at two points (1) efficiency, (2) price. Unless there is a fair equality in the result of these factors, peat must be ruled out. If it cannot be produced and sold for a price at least as low as that for which the equivalent in heating value of coal could be bought, all efforts to introduce peat will be unavailing except at times when nothing else can be had."

From tests made the conclusion is arrived at that from the standpoint of efficiency peat compares satisfactorily with coal, the value of peat briquettes being placed at two-thirds that of an equal weight of coal. Then it is shown that it can be manufactured to sell at $3 per ton, which would be equivalent to anthracite at $4.50 per ton, and at $1 per ton to anthracite at $6 per ton. Such figures at once bring peat fuel into the economic arena, as it may be doubted whether with the effective control now exercised by the trusts over the production and sale of anthracite, we are likely to see it again drop to a lower retail level than $6 per ton. In the light of the facts brought out in this report, it will be surprising if the citizens of Ontario are not soon given their choice between compressed peat fuel and coal, instead of as at present being confined entirely to the latter."

It is needless to add that the supply of peat in Ontario is practically inexhaustible.

Catalogues, Booklets, Etc.

ART TREASURE STOVES.

The D. Moore Company, Limited, Hamilton, have issued a very attractive folder, containing illustrated descriptions of the six leading base-burners which they will be offering to the trade for the coming season. This will be worth getting before a stock of stoves is purchased.

THE CROWN HURON

The Western Foundry Company, Wingham, Ont., have prepared a neat booklet describing their "Crown Huron" range, which they say is fresh from the pattern shops, and is especially designed to fill the demand for an up-to-date medium size cooker, with all the desired modern appliances, which is attractive in appearance and moderate in price. This firm have also prepared for the use of the retailer a booklet containing 35 warm testimonials from persons who have used the "Crown Huron," as to the practical value of this range.

HEATING BY WARM AIR

One of the best booklets of the year has been issued by The Gurney Foundry Company, Limited, of Toronto, comprising an illustrated catalogue and price list of "Oxford" warm air and combination furnaces, which are made in every style to suit the varied requirements of the Canadian market. In addition to illustrations and descriptions of the furnaces, there are several pages devoted to directions about setting furnaces, making estimates, etc. This valuable booklet will be sent to readers of "Hardware and Metal" on application.

Notes of the Trade.

The Paulin Company, tinware, etc., Simcoe, have assigned to T. R. Nells.

The assets of the business of R. E. Holmes, tinsmith, etc., Vankleek Hill, are to be sold by tender on June 15.

Charles Fawcett, of Sackville, is at the Royal. Mr. Fawcett now has the largest and best equipped stove foundry in eastern Canada. He has made an addition recently to his establishment, and will make another shortly. Seventy-five men have found employment there of late, and after the extensions are completed the staff will be increased to 100 or 110 men. St. John, N.B., Sun.

Stove Company for Brantford.

Letters patent have been issued for a new Brantford industry to be known as "Telephone City Stoves, Limited." The promoters are H. Yeigh, J. B. Turner, A. W. Kerr, E. J. Kerr and A. H. Elliott, all of Brantford. The capital stock is placed at $40,000, and the stove to be manufactured is the Turner patent air-tight wood stove. The Brantford Expositor says: "The new stove company expect to commence operations about July 1. Machinery has been ordered, to be due by that date, and work will be commenced immediately upon its arrival. The company intend to commence on a small scale and work up. All their manufacture is to be handled by the Burrow, Stewart & Milne Co., Hamilton, Ont.

Window and Interior Displays

Timely Hints and Suggestions.

IN arranging displays in any kind of store window it is wise to aim at something likely to attract the attention of every passer-by, to catch the fancy of the general public. Often this can be done by drawing attention in some unique way to a name, the brand name of the wares displayed.

G. A. Richardson, of Guelph, Ont., has won great attention to his window during the past few weeks by an excellent example of this kind of display. The window display, it will be seen, consisted largely of "Stag" brand paints, so he, to impress the name of the brand on the passer-by, introduced into the display a fine specimen of a stag, a trophy of the chase. It is hardly necessary to point out that not only should such a window attract wide attention, but its influence would be unusually lasting. Any person having once seen such a window would not soon forget that "Stag" brand paints were sold by G. A. Richardson. It is a generally recognized principle that the first essential in advertising any goods is to have them recognized. But Mr. Richardson goes further in this display. The impression of the name is backed up by a strong argument regarding quality, as will be noted in the top line. It is to be seen, too, that color cards are used in the foreground, an argument that a range of popular colors are carried in stock.

A TRADE-WINNING PAINT DISPLAY.

Another good feature of the window is the display of brushes together with the paints. There are many householders and some painters who are forgetful, who need to see a display or advertisement of such a line as brushes before supplying their needs. The arrangement is in every respect neat and attractive, well calculated to hold attention first won by the novelty of the display.

Though not a part of this particular display the illustration shows another excellent idea incorporated by Mr. Richardson. The invitation to "drop in and see our stock" is in a most appropriate place, and in all probability, has been in many cases the final argument to induce people who have been attracted by his displays to inquire further about his wares.

Hardwaremen generally will agree that the window shown is an excellent one in every respect, yet how many of them might have sold "Stag" brand paints and had a stag or at least a stag head at home and never thought of using the latter to draw attention to the former? And if a census were taken it would be revealed that the reason given why many of them would not think of it would be that they are "too busy to think of novelties for displays in their store." Such an excuse for inferior windows has been given time and again to the writer. Yet what reason can can there be for it? A merchant should have an open, alert mind. If he has, such ideas will come to him without great study. If he forms a habit of noticing windows and comparing one with the other as he passes other stores he will soon find himself an authority capable of deciding almost instantiy what style of display he desires. His clerks, too, should be alert to receive such ideas and encouraged to suggest them to him. If a clerk suggests a window that recommends itself he should be given an opportunity to fix it up; if no such suggestions are forthcoming, he should decide what kind of a window to have, give sufficient instructions to enable the clerk to arrange it, and then he should examine the window with a view to making minor changes likely to effect an improvement, to make it more attractive to the ordinary passer-by.

Attention should always be paid to minor details, but too much time should not be spent in trying to secure an artistic effect. A window display, like everything else in business, is a commercial proposition. Its end is to make dollars and cents for the proprietor of the window, so it is often the case that a novelty introduced into the displays will be of infinitely more value than an artistic, yet common-place, display. Such a novelty as the one shown herewith is bound to win general attention.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITISISM

Edited by **W. Arthur Lydiatt,** TORONTO.

NOTE.—Herein are discussed the principles and practice of advertising. Subscribers are invited to send Mr. Lydiatt specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

Don't wait until you publish an especially good advertisement before you send me your ads. for review in this department. Don't be afraid of a little honest criticism. I will only try to point out the faults—if such there be—that you may have ideas for the improvement of your ads. You don't have to follow my advice or act on my suggestions.

I simply want you to send me specimens of your advertising matter—just what you are using now, or what you have been using. I'll tell you of every way in which I see it might be improved. I will call attention to the good points—mention the weak points.

If you spend money for advertising it is surely advisable to see to it that you get your money's worth. And if you tell me just how you are spending it—show me what kind of advertising matter you use—perhaps I'll be able to give you some suggestions which will help you make your advertising more profitable. It's worth trying, anyway. THE EDITOR.

I REPRODUCE this week one of two ads. sent in by John & Jas. H. Kerr, of Wingham, Ont., accompanied by the following letter:

Mr. Lydiatt,
Toronto, Ont.

Dear Sir,—I enclose two ads. written by myself and published in The Wingham Advance. I always write the advertisements. I have very little time for this work, but make it a point to change often. I never let the same ad. appear more than twice. I find by far the most profitable medium of advertising is the home paper. In fact, outside of our two local papers, we have not spent a dollar in the last three years in advertising.

Kindly let me know how I may improve in my ad-writing. Of course, we do not always have our ad. set up in the same style. We change often. I always dictate the style of an ad. I want.

Yours truly,
JNO. KERR.

For Jno. & Jas. Kerr.

I would not mention so many different articles in your ads. Such things as are mentioned in the column on the left need not be mentioned in such detail, unless special cut prices were quoted—and they are not in this instance.

I would have had one heading across the the top of the three columns—"Housecleaning Time"—and followed it with a short introduction referring to the trials and troubles of this spring event and calling attention to the fact that you had lots of things to help make it easy work, and some nice new things to freshen up with, replacing worn-out carpets, curtains, bed clothes, etc.

Take time to write your ads. properly. It is most important. If you find it desirable to work overtime, fixing the store up nice so that people will be favorably impressed when they pay it a visit, doesn't it seem consistent that you should spend the necessary time to prepare the invitations to visit the store in an intelligent and inviting way?

I would have the heading, "The People's Popular Store," set in a type similar to the one in which "Spring" is set, immediately below. At the bottom, I would have the name set in large type in the middle, and the address set in the side, where the name is now repeated. I would not make the address more prominent than the name, unless there should happen to be another firm of the same name in the town.

I would adopt a satisfactory style—and then stick to it. It is best not to change the style of the ad. very often in the case of a store like yours. People become accustomed to looking for a certain style of an ad., and are then more easily able to find it and are also better able to note the bargains or specials which you advertise, because they know just where you always put them.

In a store, such as I judge you have, I think it might be a good idea to divide the ad. up into sections—say four or six—devoting them to the different departments of your business, and giving each department attention in each ad. Sometimes one department might require two or three of these divisions, when, of course, some of the

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

75 YEARS *ESTABLISHED 1825.* *75 YEARS*

other departments would take a back seat for the time being.

I wouldn't run the same copy twice. It's that much more bother, but you'll find it

well worth while. I fully realize that the bargain opportunities and "new" items in a store in a place like Wingham are not sufficently frequent to crowd the space any. It is often a puzzle to know just what to advertise. But you might get many suggestions which would prove helpful if you would take some of the retailers' advertising journals, or, by securing the New York or Chicago papers regularly and watching the big stores' announcements — notably Wanamakers. These will be full of suggestions as to what to advertise—and how to advertise it—how to talk about the goods interestingly.

If you see fit to carry out any of the suggestions here offered, I hope you will send me a few of your ads. showing the result. Perhaps I may then be able to offer further suggestions.

THE ILLUSTRATION.

This Ingram & Davey ad. here reproduced came in the form of a large circular 12x17 in. The address is missing, so I have no clue as to where their store is located. This circular is simply an arrangement of a number of those syndicate ads. to which I referred in a recent number—the cuts are there too. It is hardly satisfactory — too general in nature. The curtain stretchers are the only things priced. There is not much news in the rest.

FOR BELIEVERS IN SIGNS.

It has not been so many years that the black and white sign was invariably the rule; but since the advent of the advertising sign painter, with his ways that are vain and curious, it has become the exception, says an exchange. There is a great deal of black used, but not in connection with white. Blue has largely taken its place as a ground color, while in the pictorial sign the coloring is done on artistic lines as far as possible. For large signs on rough and uneven surfaces such as dead walls, rocks and cliffs, a very cheap yellow coating may be made by stirring a solution of green vitriol into lime milk. The paste which is at first greenish from the separating protoxide of iron, becomes a yellow by oxidation in the air after it is applied and dry. The more green vitriol is added to the lime milk the darker, of course, the color. This paint is said to adhere firmly to any surface, and cannot be washed off. Besides, it has a brighter appearance than one mixed with lime and ochre, and is cheaper than the latter. It makes an admirable background for large letters in black or purple.

FAULTS OF TELEPHONES.

Few persons, when their telephone gets out of order, know what is the matter with it. The best telephone made will often become impaired. Here are a few points that will doubtless enable you to determine where the fault lies when such trouble occurs :

1. Can hear but cannot be heard—This fault is frequently caused by leaving the receiver off the switchhook, after the conversation is ended, the neglect resulting in the premature exhaustion of the battery.

2. Can hear at both ends, but can ring one way only—This may result from a weak battery at one end, or the bell at the faulty end may be out of adjustment.

3. Can ring in both directions, but cannot hear at either station—This may result from a broken receiver cord, or from a disconnected wire in some other part of the secondary (or speaking) circuit at one end only.

4. Ringing and speaking alike unsatisfactory—This may result from weak batteries at both ends, or from a bad joint or bad earth connections.

5. Hearing bad, with rasping noises—This may result from either of several causes—a loose joint, rust or buckled diaphragm, or excessive battery power in microphone circuit.

Noises in one receiver only—This will probably result from one or more particles of iron having been attached to the poles of the magnet, the diaphragm's vibrations being interfered with in consequence. To remedy this, unscrew receiver cap and wipe off magnet cap.

Badly soldered joints, loose terminals, dirty contacts, broken battery jars, and terminals short circuited, are also frequently causes of local faults.

Line making partial earth will cause ringing and speaking to be alike unsatisfactory.

Line faults may be caused by two or more lines in contact, by the line making partial or dead earth or by a broken wire or insulator.

Lines in contact will result in cross talk and bells ringing when not required.—Ex.

CURRENT MARKET QUOTATIONS.

June 12, 1903.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

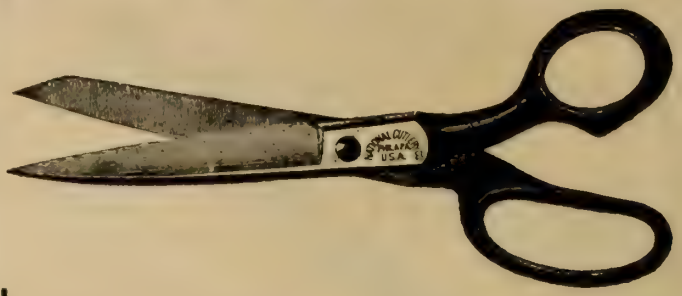
MONTREAL, QUE.

The **NATIONAL CUTLERY CO'S** "no joint" Shears are like all their other Shears in respect of construction and quality. In construction



they exceed all others, because the steel is laid the full length of the shear blade, consequently the thread for the screw is cut into steel, instead of only into malleable iron. This gives, not only a purchase to the screw that stands forever, but also an easy, smooth ride between the two blades. For quality, try them, we guarantee them, that's all.

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, JUNE 20, 1903. NO. 25.

Subjects Being Discussed at Ottawa

Written for Hardware and Metal by a Member of Parliament.

House of Commons,
Ottawa, June 15, 1903.

VERILY Ottawa politicians have no reason to complain of lack of variety in their parliamentary bill-of-fare. Last week the corridors and committee-rooms were buzzing with discussions as to a new transcontinental line, with an expenditure in connection therewith ranging from eighty millions for a Government road, all the way down through various proposed subsidies, to nothing but a bare, a very bare, charter; and this week Mr. Fielding starts the ball rolling with a bill for the establishment of penny banks. Needless to say, the object of these new institutions in the field of commerce is to encourage small savings, and no depositor is allowed to have more than $300 in the bank at any one time. As a penny is two cents, we can accurately estimate that an energetic contributor can deposit 15,000 times before he loses further privilege, and as, eliminating Sundays and holidays, he has about 300 days in the year, he can keep on doing business for just 50 years. Surely, this should satisfy the most demanding.

* * *

When we remember how many among the Captains of Coin in the great Republic to the south of us have started their capitalistic ventures by the saving of half-dimes arising from polishing their clients' shoes—later in life they usually polish their clients pocket-books with much larger resultant profit to themselves—we cannot overestimate the immense advantage likely to accrue to Canada from the establishment of this new financial collecting agency. In the course of his explanatory remarks, Mr. Fielding very modestly gave the credit for his proposed measure to a "Toronto philanthropist." He tells us that this gentleman moved in the matter a year ago, but that, for reasons of state, his wishes could not be carried out at that time. Surely this gentleman was not only a philanthropist; he was also a seer. He must have foreseen the slump in Canadian stocks, with special reference to his home, Toronto. There are at present very few in the "Queen City of the West" who would find it convenient to use for deposit purposes any but a penny bank. To these gentleman our assurance that on each banking day for 50 years to come they may walk solemnly up and lay their penny on the counter without let or hindrance will come as a reassuring truth, for we think they will agree with us that in half a century the stock market will have become so buoyant as to justify us in the withdrawal of our $300, and its investment in a ground-floor purchase on a margin, to which our attention has been called by the sure tip of one of the directors who knows. Let us not be misunderstood. In our 50-year calculation we are not considering the subject of interest—we expect the depositor to draw this for running expenses—a man must live.

But the Minister of Finance was not to have it all his own way as a philanthropist. Scarcely had he resumed his seat after answering the numerous profound questions elicited by his announcement, when the Minister of Justice sprang to his feet. His was a scheme for the betterment of women. No self-proud measure his, but a plan more philanthropic. Just a little bill to give the fallen sisters of St. John, N.B., the same chance enjoyed by those of their class in the Andrew Mercer Reformatory in Ontario. Marvellous to relate, no prolonged discussion followed, and the honorable gentleman was granted leave to introduce his bill.

* * *

And then from being fishers of men, or rather, of women, the members turned to the fishers of mackerel, their attention being called to the incursions of certain smart Yankees who followed the schools to the coast of that famous county which sends as its representative the genial, eloquent, and, at times (like all Highlanders), really poetic "Giant of Guysborough." The Minister of Marine having given satisfactory assurance that our tricky cousins would be better watched in future, the uproar subsided, and the Ministers proceeded to answer, so far as unto them seemed good, the questions put by members thirsting for information. And it then did appear that Sir John Boyd had "no sons or relatives" in the employ of the Government, as well as sundry other matters of equally absorbing interest and usefulness to the country.

Among these other matters, the question of that staunch Independent, Mr. Jabel Robinson, of Elgin, is worthy of passing notice, but before dealing with it, we cannot refrain from recounting a little anecdote characteristic of the interlocutor. When in the Session of 1900 the sessional indemnity of the members was raised by Act of Parliament, Mr. Robinson nobly voted against the measure, which it was a foregone conclusion

would carry and be alone so recorded his opinion. One of the supporters of the bill, rather a wag, after the vote was taken, made it a point to ask Mr. Robinson what he would do now that the resolution had carried. "What shall I do?" said Mr. Robinson. "What can I do? Aint it the law of the land now? Why, I must take the increase!" and so he was. But to his question. After making a speech in the House a member may have it printed in as many copies as he wishes in the Government printing Bureau at cost price. Having made what he considered a brilliant speech, which the stupid dailies have scarcely noticed, it is but natural that a representative should wish his constituents to sample the output of his genius, and so he orders many copies, and the side-lines of his county are speedily illumined. So far so good. But it doth appear that several gentlemen having gotten the goods have forgotten to settle for the same. It was with regard to these recalcitrants that Mr. Robinson uprose and spoke, and the purport of his question was, what treatment is meted out to these men? Are they made to pay? By whom? How soon, and how? To which the Premier replied that the matter had been dealt with so far back as 1897, the Treasury Board ordering a suspension of credit in all such cases, on the well-known principle of the country store-keeper: "You'll get no more till you've paid for the last you got."

* * *

After questions, Mr. Blair moved a motion with regard to railway aid to a portion of the system of Mackenzie & Mann, which is of vast interest and importance as an earnest of future Government policy along these lines. A guarantee of the principal and interest of the first mortgage bonds is to be given. We use the word "given" in that loose sense which has led to so much inane discussion in connection with railway aid—"exchanged" would be a better word; better in sense if not in sound. To give, suggests very strongly the handing over of something, receiving nothing in return. In Mr. Blair's scheme this is very far from the facts. The road, it is true, receives a guarantee which will sell its bonds at a high price and enable it to finance its schemes, but in return the country receives (1) a railway which will open up and develop new country, to the increase of the best elements of our population, and of our purchasing power, which latter, since a percentage of our consumption will always be from foreign goods, means in time an increase of revenue with the further possibility of development which money gives; (2) a claim upon the road when built if ever the Government is forced, on default of the company, to pay either principal or interest, in whole or in part; (3) the control of rates and tolls, not only upon that portion of the line to which the guarantee applies, but upon the whole system of the Canadian Northern Railway, such control to be exercised by the Governor in Council, "or of such authority, commission or tribunal as is designated or constituted under any act of the Parliament of Canada for the regulation or control of the business of railways." The clause quoted will let in Mr. Blair's Railway Bill of this session, so that we may consider this regulation of rates as something very real, not a mere empty formality to cloak a gift, but a condition of immense value, as in all human probability the Government will not be out one cent in the long run in actual cash, since the subsidized road will pass through a country where freight will in time be plentiful. It means we are to get a valuable concession in exchange for the use of our credit and at no monetary sacrifice to ourselves; (4) the right to grant running powers over any portion of the lines aided to any other railway company on terms which seem equitable to the Governor in Council. This insures a fair measure of competition in large sections of the West where influx of settlers will produce new roads in the future, and the same end is further served by (5) the right to prohibit lease or sale to the Canadian Pacific Railway, or any arrangement with that road for the pooling of rates. Aid granted under conditions such as these cannot surely be very much objected to even by those who take the extreme ground against all kinds and conditions of subsidies, and to whom anything of a railway character is as a red flag to a bull.

* * *

Probably no debate since that on the budget, and that, of course, we confine to its early stages, has aroused such wide-spread interest in Canada, as has that on the resolution of Mr. R. L. Borden that in the opinion of the House the tariff of customs duties should be so amended as to secure the Canadian market for Canadian producers of iron and steel. The reason for this is not far to seek. Patriotism is not dead in Canada, but it requires something in the nature of a national crisis to call it forth. On the other hand, self-interest is an ever-present active force, and self-interest was nearly affected by the motion of the Leader of the Opposition. While no specific case was mentioned in connection with his resolution, everyone acquainted with commercial affairs associated it with the great industry of The Dominion Iron & Steel Company, at Sydney, the common stock of which, representing at par value 17 millions of dollars, has fallen in the market from 79 to from 10 to 15 per share. During the stock market boom of last year fortunes large and small were made with marvellous rapidity; financial successes were freely chronicled in the press, and thousands of people who had never before "played the markets," invested the savings of years in the purchase of industrial securities upon a margin. The knowing ones gave it forth that "Iron & Steel" was the next going to par, and on this tip the public went in. In every hamlet in the Maritime Provinces someone can be found who has put money in the stock of this company, while hundreds further west, notably in Montreal and Toronto, have invested heavily. With the recent heavy slump, wide-spread ruin has resulted, but while many have dropped their all, others have been able by great financial strain to margin down, and these have been looking with hungry eyes towards Ottawa in hope of a raise in tariff, which would so improve the prospects of the company as to send stocks back somewhere towards their old level. While for these unfortunates we have nothing but sympathy, their case must, nevertheless, be disregarded in the consideration of the iron trade of Canada. The question is not what will recoup the losses of the brokers and their following, but what are the requirements of this great industry in Canada?

* * *

Mr. Borden's speech was a good one, containing many valuable statistics, and his points were lucidly and logically made, but the arguments were not new, and scarcely could be; they were as old as protectional propaganda itself. He stated, as reported in the unrevised Hansard of June 9, 1903, that in the year ending June 30, 1902, we imported of iron and steel goods and manufactures thereof, over 33 millions worth, as against a little more than 10 millions in 1896, and he asks why not so protect the native industry as to produce all or nearly all these goods in Canada, etc. He argues that since wire, put on the free list of the Liberals, costs more now than when under an import duty, therefore, duty does not enhance price. With this argument we cannot agree. In a

HAMILTON, ONT.

free market price is determined by supply and demand. Impose duties and you interfere with the rule, and those behind the tariff wall can assuredly raise prices to the extent of their protection, so that the point is not how high is a certain article on the free-list, but how much higher would it be but for being on that free-list? We are disposed not to worship the consumer as does the out-and-out free-trader, but we must admit the economic truth, that he pays more for his goods under a high tariff than under a low tariff or no tariff. The question is how much of a burden should the consumer (and in the case of such a staple as iron the consumer is everybody) be saddled with to procure the advantage of the establishment of a great industry? Feeling as we do that Canada possesses the economic condition necessary to produce iron cheaply and well, we think the people are willing to pay a little more for their goods to set the industry on a firm footing, but we do not close our eyes to the fact that a little more will have to be paid if protection be increased, notwithstanding Mr. Borden's argument founded on the price of free iron.

* * *

While the motion was voted down, it must be noted that the Government did so on the ground that it was a vote of want of confidence, and not on the ground that no further aid be given. In the speeches of both Sir Wilfrid and Mr. Fielding there is a notable absence of refusal to increase the iron duties, and we believe from the sentiment of the members and from what seems to be "in the air," that something will before a great while be done towards further protection for the iron industry.

Working Together.

Next to the recognized high quality of ***The Sherwin-Williams Paints and The Sherwin-Williams Varnishes,*** the principal reason why S.-W.P. agents are more successful than other paint dealers is the way we work with them.

To get a good agent is only half our aim, the other half is to help him build up his paint business. We work with all our agents from the very moment they place our goods on their shelves. We believe that it is an essential part of our duty to help keep our products moving off the agents' shelves. It is by practising that belief that we have been able to build up the largest paint and varnish business in the world.

Our booklet "B—13" describes fully the way we shall work with you if you will take the agency for our products. Write for copy to-day.

THE MINUTE MAN.

AT a recent Sunday school convention in Toronto the president announced a hymn. But there was no one to play the little organ.

"Will some one come?" he asked, "there must be 150 players here."

There was an awkward pause, said a reporter in describing it, and a short fat man jumped up and made a bee line for the stool.

"I don't know how she goes, but I'll do the best I can."

That's what he said when he sat down. He did his best, and his best was good. That fellow, I learned, is a success in life. He does his best at anything he undertakes.

He is a Minute Man.

We want Minute Men in Canada.

By Minute Men I mean fellows who can jump into a gap, who can pull success out of defeat; chaps with gall enough, but not too much; utility men, who, if they haven't got a hammer, will take a stone.

We need them.

There are enough people in the world like those 150 players who can, but won't; who are afraid to get up. Afraid of what? Afraid of themselves.

This Minute Man said, "Here goes."

Minute Men are rare birds.

"Good men are scarce, and money is a secondary consideration when we land one." That is what a manager in one of the largest departmental stores in the world told me.

He meant Minute Men when he said good men.

He meant men who can think for themselves, men who can and do, men who are sixteen ounces of get there to the pound, who have an emphasis on their No and another on their Yes.

Supposing that fat chap had not played the organ. He might have sat there and said to his soul: "Here now, I'm not used to that pesky little organ. I play a piano. I wonder if my tie is on right? Is my hair brushed down behind?"

He didn't wait to talk to his soul, but got up and played.

He might have said: "Why didn't they have an organist ready? That's stupid on some one's part."

But his body wiggled as he pumped with his feet, and his face shone and he sang all over.

You can go into any office, store, or factory of any size in Toronto, Canada, America, or the wide world, and you will find men and women who say: "That ain't my work, let him do it himself. Who said I had to do that? It will soon be six o'clock."

Give a Minute Man a job and he will do it if there is any do to it.

Give the average man a job, and he will try and get the other fellow to do it.

The average man has a horizon bounded on the north by his nose.

The Minute Man looks away out with eye almost prophetic. Then he digs in. If he can, he does. The average man is handicapped by besetting sins. So is the Minute Man. But he hustles to beat out the handicapper, the Devil.

He is like the fellow at the organ.

WINDSOR RETAILERS.

THE Windsor, Ont., retail merchants held their regular monthly meeting on the 9th inst. There was a good attendance of the members, and a lot of business went through with a rush. The principal business of the evening was the appointing of the various sub-committees to carry out the details of the first annual outing of the association to be held on August 3 next, that date having been set as the Civic Holiday in Windsor, Walkerville and Sandwich. The following are the names of the gentlemen appointed :

Reception Committee.—Frank Hutton, J. E. Davignon, C. C. Schumacker, J. W. Drake (Mayor), A. H. Nelson, Geo. B. Lodge, B. G. Davis and W. J. Fielding, chairman.

Sports and Prizes Committee—A. J. McTavish, Alex. Gow, Bruce Allison, W. A. Sweet, B. G. Davis, W. H. Everett and A. D. Bowlby, chairman.

Tickets Committee.—James Penington, Geo. B. Lodge and Nelson J. Clinton, chairman.

Printing and Advertising Committee.—For which the sum of fifty dollars was appropriated. Geo. H. Nairn, Geo. H. Wilkinson, President A. E. Edgar, chairman.

The secretary was instructed to write to the Retail Clerks' Union in regard to the early closing movement, which was forced upon part of the merchants only some six months ago. This matter has caused a great deal of discussion at the association's meetings, and if the Retail Clerks' Union do not take some action toward withdrawing their threat of boycotting those merchants who refuse to close their stores at six oclock in the evening, the union or the association will see their finish before long. Several communications from the Dominion secretary were read. One of these told of the establishment of a most successful branch at Ottawa.

A vigorous protest from the merchant tailors of Windsor against the passage of the bill now before Parliament, which if passed would compel the tagging or labelling of each garment, showing the grade or quality of the cloth in the garment, was sent to the Dominion secretary in order that it might be sent to the proper committee of the House who have the abnoxious measure in charge. Some other matters of a minor nature were disposed of by reference to committees.

The meeting adjourned after each chairman of committees had pledged himself to make an effort to secure the success of the excursion.

TORONTO "HOME-COMERS'" FESTIVAL.

THE great "Home-Comers'" Festival, promoted by the Board of Trade of Toronto, is close at hand. Since the preliminary announcement was published, considerable changes have been made in the programme, which has been considerably elaborated and added to. As it reads now there are to be :—Dominion Day, July 1st —Arrival of contingents from Detroit, Rochester, Buffalo, Cleveland, Chicago, Milwaukee, Pittsburg, Boston, Philadelphia, New York and other United States cities, hundreds strong, some with bands, some in uniforms, some with singing choruses, and all with banners, badges, and other emblems ; amateur regatta, open to all, lacrosse matches, baseball matches, etc., reception at the King Edward Hotel and at various clubs, and open house everywhere. Thursday, July 2nd —Old Boys' parade with banners and badges, huge garden party on the University lawn. Evening—grandest Venetian fete ever held on this continent, and brilliant illumination of the bay and harbor, with fireworks and innumerable beacon fires. This fireworks fete is to cost thousands of dollars. Friday, July 3rd—Magnificent open air horse show and parade, many receptions and garden parties and entertainments at the Island. Saturday, July 4th—Demonstrations in honor of United States visitors, drives around the city, canoe regatta, championship lacrosse match, and farewell gatherings. Between forty and fifty thousand dollars will be expended on these various entertainments, fetes and receptions. Reduced rates have been secured on all lines of travel, particulars of which can be had of local station agents.

THE WORLD'S COPPER PRODUCTION.

According to the annual report prepared by Henry R. Merton & Co., Limited, London, the production of copper continues to expand. The output for the past sixteen years is given below, with the average price of merchantable copper in London :

	Tons.	Average price per ton.
1886	217,086	£40 6s 0d
1887	223,798	42 3 0
1888	258,026	76 0 0
1889	261,205	49 10 6
1890	269,455	54 1 0
1891	279,391	51 3 0
1892	310,472	46 9 6
1893	303,530	43 6 9
1894	324,505	40 2 6
1895	334,565	42 17 6
1896	373,363	47 4 8
1897	399,730	49 10 0
1898	429,626	51 7 10
1899	472,244	72 16 6
1900	484,799	73 10 7
1901	518,788	67 19 3
1902	542,470	52 13 5

Of this amount the largest producer is the United States, with an output of 294,600 tons, as compared with 267,410 tons in 1901 and 69,805 tons in 1886. Canada's production has decreased slightly, being 17,485 tons against 18,800 tons the previous year. Mexico and Japan show small increases, but other countries producing any amount worth considering, show a reduced output.

Window and Interior Displays

Timely Hints and Suggestions.

It has become a recognized fact in almost every merchant's mind, that to a great extent the success of his business depends upon the use he makes of his windows. He realizes that a well-arranged window means increased sales, both through the advertising it gives him and through the attractive way in which a certain article is displayed.

That he may not sell much of the article displayed, is by no means any proof that that window was a failure.

He may spend a great deal of time and attention and even money on the arrangement of a window, and may not sell $5 worth of the article displayed during the next week. But it is decidedly rash to jump to the conclusion that he has gained nothing from that display, and that it has been a waste of energy and money.

The advertising he may receive by that tastefully decorated window may amount into the hundreds of dollars, if a valuation could be put on it.

His fellow townspeople may have been well supplied at the moment with the article over which he spent so much time or it may even have been a little unseasonable in its nature, but he can rest assured that when anyone needs that ware he will not forget that Blank carries it in great variety and good prices.

In addition comes the immediate result, that the window will stop people, and the carefulness displayed will not only make or sustain a reputation for the firm, but will attract the passers-by into the store for anything they may need in the lines handled by that store.

It is practically impossible to estimate correctly the benefits derived from a certain window. A customer may see an article in a window to-day and may not buy it until some months from now. And yet it will have been the display of it that kept before his mind just where that article is sold.

It is very much similar to advertising. An advertiser fills his space attractively, pays his bill and then sits down to watch for results. Simply because people don't immediately rush to his store and clamor for the thing advertised, and exclaim that they saw it in the advertisement, many fairly thoughtful merchants conclude that the results have not paid for the cost of the advertisement.

The results from a window display or advertisement may extend over months, or may do nothing more than present the name of the firm to a few people who have never had their attention called to it. In either case it pays, and pays well.

The merchants who employ in their window mechanical displays or attractions not in their line of business, are aware of the fact that results from show windows cannot be based entirely on the direct sales. Although it is a debatable question whether such exhibits bring the trade they are often supposed to bring it cannot be denied that much good is done by stopping pedestrians and drawing the name of the firm to their attention.

The writer has for years passed back and forward on a certain street and never noticed or knew of the existence of a certain cigar store, and yet, only two days ago, he suddenly became aware of it by noticing a crowd looking at a well set up collection of coins in the window.

To a new or small store, such attractions are of particular value, and to any store they are worthy of trial.

ECONOMIES OF SPACE.

The hardware dealer should ever have in mind the desirability of economizing every foot of floor and wall space possible. It is always wise to give customers ample room to walk about in, yet ingenuity might ever be exercised to arrange goods so as to display as much as possible in an attractive manner.

A DISPLAY OF BUILDERS' SUPPLIES.

A CHARMING ART POSTER CALENDAR.

The progress of lithographic art is being manifested in many ways, but in no way more so than in the production of art poster calendars. The collection of posters has become a fad throughout America, so, especially in the large cities of the United States, lithographing houses devote much attention to this class of work. An exquisite specimen of such calendar has been received by HARDWARE AND METAL from W. F. Powers, 23 City Hall Place, New York. It is about four feet long, and shows in rich coloring a full-length drawing of a summer maiden, so charming as to attract every eye.

MACHINERY

MAKING TOOLS FROM OLD FILES.

ONE of the most practical ends to which science is devoted to day is the utilization of old materials, of articles which have served their purpose in one capacity and are useless until by some further process they are adapted to new usefulness.

As a matter of convenience, chisels, drills, punches, and tools of a light character are often made from old files, and while some answer well, others fail, and fail chiefly because they were not properly treated, says Walter J. May, in The Practical Engineer. In selecting the files to work up, squares usually are the best, and the fine-cut kinds are to be preferred as the metal is not bruised so deeply as with first cut and rough files. Of course, in a workshop where files are plentiful, no very great care is taken in making up chisels, but where they are wanted good a lot of time is taken, and eventually it is cheaper to buy hexagon or octagon tool steel than to work up scrap files, unless the smith has "nothing to do and plenty of time to do it in."

The first thing to be done is to soften the files, and this is most easily done by placing them in a flue where they will remain at a dull red heat for from five to twelve hours, the object being to anneal them right through. Or make them slowly, but thoroughly, hot right through in the forge, drawing to a bright cherry-red, and then allowing to cool slowly; but this leaves the metal rather more brittle than when the first process can be adopted.

Having the files annealed, they should be ground until the cuts are removed, as this gives the best metal to work with; but this grinding is not absolutely necessary, and in the trade workshop is rarely done, save to kill time, as with proper tools at the forge, and skilled men to use them, the metal is worked up decently. Still, where there is time, one may as well do things well. In forging, the files should be made to a full red, being careful to heat with a low blast, and take time to get the centre of the steel hot, or you will split it up when you commence to use the hammer, high carbon steel being very different to iron, and can be melted on the outside under a strong blast while the centre is hardly red hot. Cut off the tang of the file to get it out of the way first, then draw the bar down to an octagon shape with the hammer, and finish with a safe hammer or flatter if you have a striker, but if not the hand hammer must do all the work. The blows of the hammer must be dead ones given with some force, and while not having the metal above a cherry-red it must not be hammered back, or it will split, and the cracks will probably not show until the tool is tempered and maybe ground. Having drawn the metal into the right section, the cutting end, if a chisel, of the shaped end, if a punch, must be drawn down, after which the tool should be cut off to the right length and the head finished. Drills will have the heads made square, or of the shape best fitted for the chuck or stock in which they are to be used, and those for use in a ratchet brace should fit properly without packing.

When the tools are forged they should be filed or ground up preparatory to hardening and tempering, and then very carefully examined to see if any cracks exist, and if the work has been properly done, filing will be quite an easy job comparatively; but, of course, all kinds of filing are hard work when persisted in. In all tools a bright side should be made for the color to run on, as it is thus more surely seen.

In tempering, the tool should be made a full blood-red for a sufficient distance from the end to enable the heat to cause the color to run, and this heating should be slow enough to cause the centre of the tool to be practically as hot as the outside—there is always a slight difference, perhaps a dozen degrees—and dip in hot water to blacken the surface. Rub the brightened side at once with a piece of dry sandstone, and watch the bands of color move down until the purple band just reaches the end, and then quench at once in hot water. If you have the yellow shades on the edge of tools made from files, you will find them very liable to split and chip off, but with many of the tool steels the yellow shades are right. Carpenters' and shoeing-smiths' rasps, when made into tools, should be tempered to the yellow shades, as the steel is usually of a milder quality than that used for ordinary files, and consequently the higher tempering is necessary.

In hardening and tempering high carbon steel, always use hot water, to reduce the shock given to the metal, and dip the article steadily and not too rapidly into the water with a circular motion. If you dip high carbon steel to a given point into cold water and hold it there, you will in all probability get water cracks, and with chisels, punches, and the like kinds of percussion tool such cracks are often dangerous, as the tool breaks off suddenly and the fingers get more or less smashed or damaged.

Be careful also that you do not overheat or "burn" the steel in forging, or about a couple of blows will smash the tool; and in annealing, if you must plunge the metal into anything, use thoroughly burned ashes free from carbon or sulphur. If you use ashes holding carbon, the steel in cooling will absorb some and become harder; if you have sulphur present, its brittleness will be increased; and if you use lime on the carbon, the surface tends to burn out, and thus soften the outside of the steel and make it awkward to work with.

As a rule round files do not forge well, but with some makes they work worse than with others, and decidedly, round files are inferior to square ones, for punches, as there is a tendency to avoid forging sufficiently, and this alone is a point which is often fatal to many tools made from scrap steel.

Thin flat files, when annealed and ground, may often be drawn down and made into stiff hacksaws, but the hardening and tempering presents a considerable amount of difficulty. The teeth are cut with a three-cornered file, and the blades ground thinner at the back than at the front. After hardening, the temper should be drawn to a purple on a plate heated bright red, the blades being turned over from time to time to keep them equally heated. Unless the color is equal from end to end the saws are not up to much, and in this lies the difficulty.

CAST IRON FLY WHEELS.

THE results of a series of experiments carried on by Professor Banjamin, of the Case School of Applied Science, Cleveland, Ohio, with small cast iron fly wheels of various forms of construction, are given in the last report of Inspectors of Factories of Ontario. The wheels were revolved at high speed and

their bursting points and eccentricities noted. The conclusions arrived at are briefly as follows: For wheels of moderate size, correctly proportioned, the solid rim is by far the safest form and will require a speed of from 350 to 400 feet per second to produce rupture. Jointing the arms at the rims and bracing the rim by internal webs have no important effects on the strength.

Joints in the rims are the principal source of weakness, especially if located between the arms. Probably no joint can be made for a rim of solid cross section which will be more than one third as strong as the rim itself.

Hollow rims will permit of a much more efficient joint, as has previously been shown by John Frith. In his wheel the joints are practically as strong as the rest of the rim, but this construction is hardly possible in wide faced band wheels such as are used on most shop engines. If the joints are located midway between the arms they should be reinforced by tie rods leading to the hub.

The report is illustrated with cuts, showing the fractures of wheels bursting on being revolved at high speed.

A LARGE SAFE.

What is claimed to be the largest safe manufactured in Canada has just been shipped from the J. & J. Taylor Company's safe works, Toronto, Ont., to the Bank of Montreal headquarters in Montreal, Que. The safe weighs in all nearly 330,000 lb., and it requires 11 of the largest capacity cars owned by the Canadian Pacific Railway to hold this monstrous affair. It is 22 ft. long, 20 ft. wide and 17 ft. high, and is a "double decker," having two flats, only communicating with each other by an emergency door in the floor. The vestibule, to which two doors are fastened, weighs, complete, 30,000 lb. The whole safe is made of hardened steel and is beautifully polished throughout. Each set of doors is fitted with eight combination locks, four on the inside and four on the outside; it is also fitted with three special chronometer clock locks, by which it is arranged that the safe will only open at certain times.

TO AMALGAMATE CANADIAN WORKS.

The well known Westinghouse people of the United States propose to amalgamate their Canadian air brake business with that of the new Canadian Westinghouse Electric Company. A meeting of the Organization Committee was held recently at Hamilton, and the following gentlemen were present: H. M. Westinghouse, vice-president Air Brake Co.; J. F. Miller, secretary of the same company; L. A. Osborne, fourth vice president of W. E. and Manufacturing Co.: Warren Y. Soper of Ahern and Sopher, of Ottawa; and Paul J. Myles of Hamilton.

The Westinghouse people send electrical apparatus to the value of about $2,000,000 to Canada annually and this business has now grown to such an extent as to warrant the establishment of a factory on this side of the line. The new company will be capitalized at $2,500,000 and it is rumored that Hamilton is to be the site of the new industry.

CARBORUNDUM AS A REFRACTORY MATERIAL.

Capable of preparation only in a powerful electric furnace, where silica and carbon are fused together in presence of sawdust and common salt, carborundum is highly refractory; and it has been observed that a thin layer of the same substance applied to any other material of which furnaces are usually constructed, protects it from the heat and renders it almost equally refractory, says an exchange. Finely powdered carborundum is made up into a paste with water glass, i. e., sodium silicate, or some similar binding substance; the paste is applied by means of a brush or otherwise to the bricks which are intended to be used for building a furnace, or those bricks are actually immersed in the viscid liquid for a certain time. If the furnace has already been built, the paste can be painted on to the exposed surfaces, giving one or more coats as may be desired. It is stated that a layer one thirty-second of an inch thick will protect the bricks from the attacks of the highest temperature which is ever produced by combustion methods in ordinary work. Examination of the bricks in such a furnace has shown that they had not suffered in the least.

AUTOMATIC ELECTRIC RAILWAY.

Our attention is drawn to a very interesting underground electric railway in operation in the Stassfurt salt-mine district in Germany, which is worked automatically, says Kuhlow's German Trade Review. It is used to carry the salt from the mines on a tunnel line at a depth of between 20 and 30 ft. An ordinary train consists of about 30 trucks, and is drawn by an electric locomotive, which takes current from an overhead trolley line. The locomotives have two motors, each of 12 h.p. maximum, on the axles. The interesting feature of the line is that the trains are run automatically, with attendants only at the terminal switchboards. The line is divided into five sections. Each station forms one section, the track portion next to it another section, and the fifth section is formed by the central portion, which alone has a length of over a mile. Only this central section is permanently under current. Each of the other sections is controlled from the terminal switchboards by the attendants. When a train arrives at either of the termini, an attendant jumps on the locomotive, and, with the help of a controller, shunts it so that it is again in front of the train for the return journey. The locomotive is provided with a hand brake, and there is also an electric brake. Should the speed of a train become excessive on the central section of the line which is permanently under current, an automatic switch throws in resistance. In order to enable the attendant to watch the train on its journey, the central section is fitted with 12 contacts, under which the locomotive passes. These contacts work an indicator at the terminus. There are also signal bells, and every care appears to have been taken to prevent accidents. The successful working of this railway for a little over a year tends to show that no special risk is connected with its operation automatically.

SOUND ADVICE.

At the annual conference of the Associated Iron and Steel Workers of Great Britain on June 1, Ex-president Wm. Whitewall, of the Iron and Steel Institute, drew attention to the fact that steel is steadily becoming a stronger competitor with iron, but expressed the opinion that it would be many years before good iron would be replaced by steel. He congratulated the men on the harmony that had existed between them and their employers for many years. What he would like to see—and he was glad that the leaders of the men's association agreed with him—was the men avoiding the temptation that beset them at every street corner. If they embraced the principles of sobriety, even to the absolute rejection of drink, he was sure the workmen would become better off, and would take higher positions than they could at present.

THE FAIRBANKS POWER-HAMMER.

THE Fairbanks Company are presenting a new power-hammer that is especially adapted for the sort of work required in carriage factories, carworks, edge-tool and general shops. The hammer, as it will be seen by the accompanying illustration, is operated by an adjustable crank, the crank-pin sliding in a groove in the crank-plate, allowing the operator to lengthen or shorten the stroke at will. Motion is applied to the head or ram by means of a circulating rod in a sleeve or collar supplied with a large set-

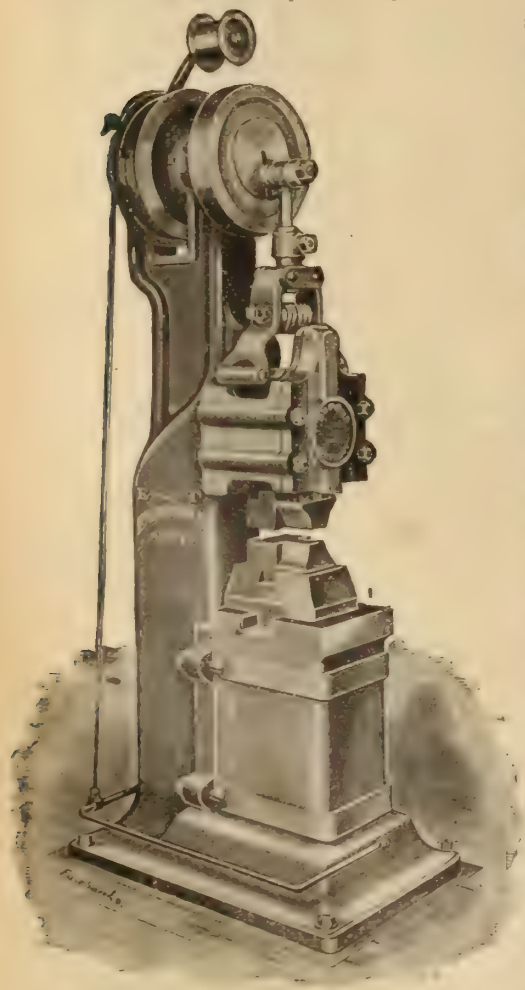
screw, or, as in the large sizes, a clamp to hold the rod in position, and to this sleeve are hinged two side-arms, those in turn being connected to the ram by metal links.

By the use of a steel spiral spring, carefully adjusted between these arms, the force and weight of the blow are many times multiplied, but with an elasticity that removes all danger of breakages, and at the same time the jar is so thoroughly cushioned that it is not noticeable in the machine when the blow is struck. The head strikes a quick, sharp blow at the rate of 250 to 500 blows per minute, according to the size of the machine, and instantly gets away from the work, thereby avoiding any chilling of the stock. The entire working parts of the hammer are at the top in full view of the operator; every part is readily accessible, being easily operated by inexperienced men. Raising or lowering the hammer is accomplished by loosening the bolt and, when at the required place, tightening again.

Another feature claimed for the machine, is the small amount of power required to



n it, and a saving of power means money saved. The entire machine is constructed with a view to durability, the best material being used throughout.

The Fairbanks Company are thoroughly reliable in every respect and can be depended upon. Their business is conducted on a line that is pleasing to each and every customer, and promptitude is a special feature of their business methods. We fully appreciate the difficulty the prospective buyer finds in edeavouring to acertain the best make of power hammer, as he himself cannot know all the different kinds, and is therefore unable to decide for himself.

HARDWARE AND METAL interested readers will do well to correspond with The Fairbanks Company, Montreal, for descriptive circulars of this machine.

A NEW STEEL PLANT FOR CANADA.

MR. WILLIAM JESSOP, of the big English steel firm of William Jessop & Son, Sheffield, has just passed through Canada on a trip round the world. Mr. Jessop speaks highly of Canada's future as a steel producing country; he thinks the conditions here are as favorable for the manufacture of steel as anywhere in the world. He did not think the British manufacturers had anything to fear from the establishment of a steel plant in Canada by the United States Steel Trust. They might supply us with cheap steel, but the source of the finest quality would remain in England, and Canadians would soon get tired of the inferior grade produced by the American manufacturers.

There is every probability that the firm he represents will start a steel plant in Canada before long. As soon as business conditions warrant the establishment of such a plant, and they are rapidly approaching such a state, the erection of it will be commenced. "A great deal of our steel is now used in Canada," said Mr. Jessop, "and when I return to England I will discuss the subject fully with my directors. It is likely that they will give it their approval, and if so, some definite action will be immediately taken."

Mr. W. H. Monsell, who represents the Jessop steel, said to a HARDWARE AND METAL reporter that the question of establishing a plant in Canada had been thought of for some time by the firm, and there was no doubt but that it would be carried out in the near future. They have already a plant in the United States, at Washington, Pa., not far from Pittsburg, which has been in operation for seven weeks, and sheets are being rolled there for the American trade. They feel no competition from the Steel Trust except in the cheaper grades of steel.

A NEW ELECTRIC RUNABOUT.

The Canada Cycle and Motor Co., Limited, Toronto, state that the demand for all kinds of automobiles has been eminently satisfactory. They are kept busy turning out victorias and broughams and have just started a large tally-ho for the service of tourists in Toronto, which makes daily calls at the hotels, visiting the chief centres of interest. Their new electric runabout, just placed on the market, has already won general approval, being both substantial, neat and light in appearance. A detailed description, accompanied by illustration, will be given in a later issue.

MACHINERY NOTES.

A. WEISKOPF, 67-69 Canal street, Chicago, is issuing to the trade a neat catalogue of his thermometers and hydrometers.

The C. P. R. have about completed new machine shops at Nelson, B. C.

Wm. Mason, a former hardware merchant of Kincardine, Ont., has again taken up his abode in that town.

Korff, Housberg & Co., Mexico City, are about to place some substantial orders for agricultural machinery, etc., in the United States.

The Crosby Works, Sarnia, Ont., are making extensive improvements in the machinery for unloading vessels at the iron ore docks.

The Amalgamated Society of Railway Servants have handed a cheque for £23,000 to The Taff Vale Railway Company, being the amount agreed upon in full settlement of the litigation which resulted from the strike of 1900.

G. A. Mountain, Ottawa, chief engineer of the Canada Atlantic Railway, has procured for inspection work on the railway a gasoline motor car. It is stated that such cars may be introduced for the use of section men on the railways.

The annual meeting of The Laurie Engine Co., Montreal, was held last week. The old Board of Directors was re-elected, namely: C. E. L. Porteous, president; Wm. Yuile, vice-president; John Laurie, F. L. Wanklyn, C. W. Davis, Walter H. Laurie and W. G. Ross.

The B. R. Seabrook Machinery and Supply Company have opened offices in Victoria and Vancouver, B. C., to carry on the business of handling all classes of machinery and supplies, hardware, automobiles and steam launches, and acting as manufacturers' agents and appraisers as well.

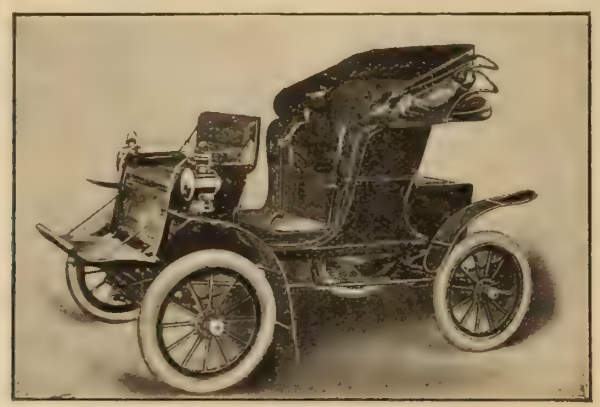
"STEVENS-DURYEA" AUTOMOBILE.

THE J. Stevens Arms and Tool Co., Chicopee Falls, Mass., have issued an exceedingly attractive booklet showing drawings of their "Stevens-Duryea" two-cylinder opposed-type gasoline automobiles; also of the chief working parts, showing its modern construction and fine appearance. This "auto." is equipped with a seven-horse-power, two-cylinder opposed motor of the four cycle type. It has three speeds and reverse, all operated by the same lever; is a two passenger carriage with a drop seat, which can be instantly converted into a four-passenger carriage; is of the Stanhope type with artillery wheels, fitted with either Fisk or Diamond double tube tires, victoria or buggy top and full equipment.

A few of the special advantages of the car are, namely, that it starts from the seat; has an individual clutch system making it practically noiseless and free from the vibration that is so noticeable in all other gasoline cars; it is a powerful hill climber and, although not built for a racing car, will readily speed 30 miles an hour.



THE STEVENS-DURYEA AUTOMOBILE.

Regular stock cars made by the Stevens company have won the records noted:

September 24.—Providence, R.I. 5 miles in 7.42. Track record for 1 to 5 miles for gasoline machines, under 1,300 lbs.

October 9 to 14.—500 miles. New York-Boston-New York. "Scarritt Cup." Two machines entered, both awarded first-class certificates.

November 27.—Orange, New Jersey—Eagle Rock Hill. Time 3.45. Gasoline car record.

April 20.—Boston, Massachusetts—Commonwealth Avenue Hill. Time-.43 1/5. Gasoline car record, under 2,000 lbs.

The price of this car is $1,300 f.o.b. factory, Chicopee Falls, Mass.

AMERICAN ENTERPRISE.

The world is used to hear of the progressiveness of United States' manufacturers, but seldom is a more striking instance of this given than has just been shown by The Pullman Mfg. Co., Rochester, N.Y. On Thursday, last week, the plant of that company was entirely destroyed by fire. Within two hours new offices had been rented, raw material ordered, and arrangements being made for buying a new plant. A fully equipped running plant was purchased within 24 hours, so that there will not be any delay whatever in filling orders, as all patterns, etc., were in the foundry.

AN EXPERT'S OPINION OF GRANBY MINES.

JOHN STANTON, the New York authority on copper, recently paid a visit to the Granby mines and smelters, and seems to have been impressed with what he examined. The mining and milling methods in vogue he classes as being as modern as any he has seen in his fifty years experience. The Granby ore-body is, he says, the largest sulphide ore deposit he ever examined, it being analagous to the famous Rio Tinto, of Spain. It is lower in copper but larger in both gold and silver than the latter. It is larger than the Tennessee deposit; in fact, larger than anything he has ever seen. The magnitude of the ore deposit permitted exceedingly cheap methods of quarrying, which method could be maintained for generations.

"British Columbia," Mr. Stanton concludes, "has yet hardly assumed the position in the mining world to which it is entitled. On my return to New York I shall not hesitate to say that the copper-gold ore bodies of the Boundary District are the largest in the world, and that it is already being conducted at a very handsome profit.

"I believe the Granby can operate at a profit, no matter to what figure copper might fall. With that corporation it is only a question of increasing or diminishing profit. I think the Granby, with the advantage of gold and silver in its ores, can produce copper at a price that would put less favored mines out of business. Certain Michigan mines now operating at a profit would be compelled to close down if copper fell below 12 cents. The Granby has not yet begun to extract ore on a large scale. When the capacity of the smelter is increased copper will be produced at a much lower figure. I think I am well within the mark when I state that it is practicable for the Granby to produce and market the metal at a cost of 7c. per lb., and possibly lower. There are very few mines that could do likewise."

BUSINESS CHANGES.

ONTARIO.

The Grundy Stove Company, Guelph, have obtained a charter.

George Woods, blacksmith, Wallaceburg, has removed to Dover Centre.

The Barrie Carriage Company, Limited, Barrie, have obtained a charter.

G. W. King, painter, Ottawa, is about to add groceries to his business.

M. J. Wilson Cordage Company, Limited, Chatham, have obtained a charter.

The Loon Lake Iron Company, Limited, Sault Ste. Marie, have obtained a charter.

Tolton Bros., manufacturers of agricultural implements, Guelph, were burnt out.

The stock of R. S. Hannah, hardware merchant, London, is advertised to be sold by auction on June 19.

A meeting of the creditors of the estate of The Paulin Co., tinware merchants, Simcoe, was held on June 18.

QUEBEC.

Petit & Frere, tinsmiths, Montreal, have dissolved partnership.

The McDonald Mfg. Company, plumbers, Granby, have registered.

Alex. McArthur, of the firm of Alex. McArthur & Company, manufacturers of paper and roofing materials, Montreal, is dead.

BRITISH COLUMBIA.

Andrews & Dodds, paint dealers, Victoria, have dissolved partnership.

MANITOBA.

A. J. McPherson, hardware merchant, has admitted his son into his business, and the firm name will now read A. J. McPherson & Son.

Mr. Westman, retail hardware merchant, reports heavy sales of harvest tools during this month; and the purchasing of poultry netting and wire fencing still continues.

THE BALANCE WHEEL OF CANADA.

As a rule unusual industrial activity and expansion develops excessive hope and leads to "boom" conditions, with the almost inevitable reaction and depression. The remarkable expansion of the Canadian Northwest has not, in the opinion of R. C. Steele, of The Steele-Briggs Co., Ltd., Toronto, who has just returned from a trip through Manitoba, led to such conditions.

"Instead of being a factor likely to cause disturbances, I have been impressed with the belief that the west is the balance wheel of Canada's industrial and commercial mechanism," said Mr. Steele to "Hardware and Metal."

"It is the west which is keeping our factories, mills and business concerns of Eastern Canada so busy. The pace here is so fast, the production increasing so rapidly, that the wonderful extension of our outlet in the west is the saving factor in the situation. The expansion there seems to be just about sufficient to keep everything running smoothly; it is the justification for the activity in the east."

"What evidence of this expansion is shown to the visitor to that part of the country?"

"First, and foremost, the undeniable fact of the large immigration to the west. Not only is this immigration great, but it is clearly of superb quality. In the early days we were contented with Mennonites and Doukobors, people who had no means and less knowledge of conditions there; who had to be helped financially, instructed in their work and have yet to be educated to Canadian ideals. The men who are now going in there are Americans and British people who have means and who are acquainted with the needs of the country. They are bringing in equipment and stock, in some cases thoroughbred cattle, and are getting right to work. In fact, some of the American farmers are not following the beaten track of 'back setting' the land (not taking a crop off it, but preparing it for the next season) their first year but are immediately sowing flax.

"I would prefer to see 500 Ontario, American or British immigrants come in than 1,000 foreigners, not merely from the standpoint of national spirit, but also of their value to the rest of Canada industrially and commercially."

"It is clear that Manitoba and the Northwest Territories have passed the experimental stage; the fear of grasshoppers and frost does not now hang like a cloud over the outlook for the future. One has but to see the enormous and substantially built warehouses in Winnipeg and at other centres to be convinced that the business men, not only of the west, but of all houses doing business there, are satisfied as to its future.

"Nearly every bank in Canada is now represented in Winnipeg and their premises are such as would be a credit to any city in Canada. The justification for this is shown in the statement of bank clearings for Winnipeg during May, which were over 50 per cent. above those of last year and double those of two years ago. Winnipeg now stands third among the cities of Canada in this regard.

"Yet after all I was more impressed by my visits to retail stores than by anything else, the surprising feature being the quality of goods handled. In the furniture, the dry goods stores—everywhere household furnishings are offered for sale one cannot fail to be impressed by the substantial and costly nature of goods bought by the ordinary resident. This was explained to me in a measure when I met one farmer who had just returned from a three months' visit to Montreal and later another farmer who last fall sold a wheat crop of 7,000 bushels and straightway left to spend the winter in California. It is unquestionably a big country, of big crops, and big ideas. A Montreal wholesale dry goods man told me on my way home of receiving an order in Edmonton from a store-keeper who had travelled 25,000 miles from the north to reach that place, bringing $10,000 worth of furs and leaving money in the bank to pay for his stock of wares for the next season.

"The crop prospects appeared unexcelled to me. It is a glorious sight to see the great wheat fields gently swayed by the summer breeze. Flax is going to be an important crop there, if present indications prove anything. There are, I believe, 55,000 acres sowed in flax in Manitoba this year and as the quality produced there is of the best, superior in its proportion of oil, it commands higher prices. The possibilities of the future in this crop may be judged from the fact that one of the Dakotas produced last year 14,000,000 bushels of flax-seed. When we reach a production approaching such figures our output of linseed oil will soon be in excess of our requirements and Canada will then export this oil, which she now imports.

"Thus it is; the west produces what the east consumes; it also consumes what the east produces. Take canned goods for instance. There are no canning factories in the west; consequently the people there buy ten-fold per capita what the residents of the east need. Thus the balance wheel works."

CHAT

J. A. REID, of the hardware department of the "Bee Hive" departmental store, Winnipeg, with his brother, J. A. Reid, of Smith's Falls, Ont., has purchased a general store at Paris Siding, Manitoba.

S. Taylor is opening a hardware store in Indian Head, N.W.T.

A. E. West, of N. B. Gerry's hardware store, of Blyth, Ont., has secured a position in the hardware store of A. Young & Son, Wingham.

Miss Pauline Boudreault and Charles Doddridge, of the hardware establishment of H. & J. Young, Quebec, were united in marriage on June 1.

Campbell & Ferguson, builders' supplies and lumber merchants, Melita, N.W.T., have established a branch of their business at Waskada.

The marriage of Miss Pauline Charlebois and J. H. A. Lemieux, of the hardware firm of Lemieux & Sons, was celebrated in Quebec recently.

The marriage of C. F. R. Taylor, of the firm of Taylor Bros. & Co., hardware merchants, Carleton Place, to Miss M. Cram, of the same town, was celebrated recently.

The hardware store of McDougal & Cuzner, Queen street west, Ottawa, was damaged by fire recently to the extent of $1,000. The fire started from a glowing cigar stub thrown into a wooden spitoon.

NEW LOCOMOTIVE EQUIPMENT.

The locomotives of the Canada Atlantic Railway are being fitted with patent fuel economisers and smoke consumers. The device is now being used on a number of their freight engines, and works satisfactorily. It does away with all the black, heavy smoke, soot and cinders, making summer travelling much pleasanter, and also minimizes the danger of setting buildings near the railway on fire.

A WELDED-JOINT WIRE FENCE.

The Dominion Fence Co., of Toronto, are makers of a meritorious wire fence, the unique feature of which is that the cross and upright wires are firmly welded together at every point of contact. This is accomplished by electricity. The fence is sure to meet with large favor. The economical and rapid production of this fence has been a big problem, but this has been successfully solved. The company is already in possession of more orders than it can conveniently fill. The company are seeking to increase their capital, in order to extend their works.

Are You Satisfied With Your Present Volume of Business?

OR WOULD YOU LIKE TO ENLARGE YOUR TURNOVER AND PROFITS?

If you did $15,000.00 worth of business last year and can increase it to $20,000.00 this year with the same help and expense,

THE $5,000.00 INCREASED TRADE WOULD YIELD MORE PROFIT THAN THE $15,000.00.

If you have ambition and enterprise we can help you to secure a large portion of the $5,000.00 increase with our new line of metal materials.

WE WILL TELL YOU HOW!

DO NOT let a single building go up in your district without securing an order for roofing, siding, metal ceilings, or ornaments. **YOU CAN SELL SOME OF THESE GOODS TO EVERY BUILDER** if you know how to talk up the merits of our goods.

A METAL ROOF,

Everlasting, Clean Rainwater, Fire and Lightning Proof, Ornamental.

METAL CEILINGS,

Artistic, Sanitary, No Cracking or Falling,

INDISPENSABLE FOR THE KITCHEN AT LEAST.

These are some of the arguments which will help you to increase your trade. Post yourself on our line by correspondence and a personal interview with our traveller, and trade will flow your way.

Do you know our line? Have you our new Catalogue?

THE METAL SHINGLE & SIDING CO., LIMITED,

PRESTON, ONT.

THE LONDON FIRE!

To the Hardware Trade of Canada:

The undersigned, being desirous to correct any wrong impressions regarding the extent of the damage done to their stock and premises on the night of the 11th inst., state, that the Granite Block looked as if doomed for a time; the extreme heat played havoc with plate glass windows, and several times in different parts of the building the fire broke out.

Although the dry goods warehouse adjoining was completely gutted and suffered a total loss, the heavy fire-walls prevented the destruction of the warehouses on each side. Owing to the fire-proof doors being closed, the stock of shelf and other goods suffered but lightly from either water or smoke.

Business has not been so active for many years, and realizing that much loss to customers and the general trade would occur through delay, our staff with their usual promptitude and energy, set vigorously to work, and this week business is running along without interruption. Travellers' and letter orders are being promptly executed. The undersigned are very grateful to their many friends for offered assistance. Friends in need are friends indeed, and they find them more numerous than supposed.

Thanking the trade for many past favors, we are

Respectfully yours,

JOHN BOWMAN HARDWARE COMPANY,

LONDON, CANADA.

"DOING" THE CUSTOMS.

THE eagerness displayed by some American manufacturers to obtain a foothold on the Canadian market for their goods leads them sometimes to adopt peculiar tactics towards that end. An instance of this came to light a short time ago, when the Montreal customs officers refused to pass a certain brand of horsenails originating in the United States, until the proper duty was paid.

The American manufacturer of the nails had colored a well known brand blue-black, by the usual heating process, and sold them at half their United States market price to Canadian buyers. In order to get them through the customs so that the duty paid would only be on the price they were purchased at, and not on their full value in the United States, the manufacturer sent his travellers through the Southern States, and in the poorest districts sold them at the price he received from the Canadian purchasers; that was, half the price he received for the same nails throughout the Northern States and in the leading American cities. Then, when their right to enter under the smaller duty was disputed, he pointed to the sales made in the South, where the same price had been received for them.

At Montreal they were stopped, but we are informed that they were brought in under the above conditions through other ports, and sold to the trade here at low prices. A traveller for a Canadian house, who has recently arrived from a trip through the Northern States, calling at Buffalo, Detroit, Rochester and other cities near the line, says that he saw these same nails in many hardware establishments, and not once were they offered at the price quoted to the Canadian trade.

The manufacturer of them threatened to make trouble for the customs officers at Montreal about them, but nothing has been done so far. Nor is it at all likely that there will be.

CANADA AS AN IMPLEMENT BUYER.

STATISTICS relating to the exports of agricultural implements from the United States during 1902, which have just been issued, are instructive, showing in a remarkable manner the relative value of the Canadian market to United States manufacturers as compared with the other countries of the world.

It has been pointed out more than once that Canada buys more manufactured goods from the United States than does any other country, but it has not frequently been possible to get sufficient detail in the figures to make the point indisputable. In this case, however, there is no possibility of question. The largest buyers of agricultural implements from the United States during the year were:

Canada	$3,123,660
Russia	2,294,440
France	2,101,697
Argentine Republi	1,939,822
Germany	1,868,672
United Kingdom	1,187,649
Australasia	964,512
Denmark	429,105

To make another comparison: Canada has been a more extensive buyer than all South America, Africa, Asia and North America (except Canada) combined. Yet the United States Government has paid double the attention to South American markets than has been given to this one, the nearest to hand.

The magnitude of Canada's purchases is doubtless due to the wonderful expansion in the Canadian Northwest and to the enterprising manner in which United States manufacturers have "gone after" Canadian business. It is also noteworthy that Canadian implement manufacturers have at the same time had as much business to do as they could handle.

TRADING STAMPS IN MONTREAL.

THE by-law prohibiting the use of trading stamps has been passed by the Montreal City Council, but in order not to incommode those who are engaged in their sale or distribution, it will not come into force till May 1, 1904. As it is expected that other municipalities in Quebec Province will also pass similar by-laws, it was thought that this extension of time would be a good thing, as they could all be brought into force at once.

During the discussion of the question, Ald. N. Lapointe, of N. Lapointe & Fils, grocer, gave some interesting information regarding his experience with trading stamps. He had been allotted a district by the company, and for a time used the stamps. He found that if he gave the stamps he could not give customers the value of their money besides. "I found that it was a case of either robbing my customers, or throwing out the trading stamps," he said, "and I threw them out. I was threatened with a suit for damages for breach of contract, but I never got any action."

The two principal clauses of the by-law read as follows:

> No person, in the city of Montreal, shall give, sell, distribute or receive any trading stamps or coupons, nor shall any person employ similar means nor resort to similar devices, which may be construed as equivalent to or as having the same effect as the said trading stamps or coupons.
>
> No person, firm, company or corporation shall, in the said city of Montreal, carry on or pursue the trade of such stamps or coupons or other similar devices, or their equivalent, or that which may be construed as having the same effect.

CANADA'S PROSPEROUS CONDITION.

ONE of the most reassuring features of the trade situation in Canada at the present time is the bright crop outlook in the grain-growing provinces of the country. In both Ontario and in the Great West the conditions are of a most promising nature. The acreage under wheat in Manitoba is this year close to the 2,500,000 mark. The official report puts the figures at 2,442,873 acres, which is 402,933 more than last year, or an increase of over 19 per cent. Based on the average of 1901, which, it will be remembered, was smaller than that of last year, it means an increase of about 10,000,000 bushels in the yield of wheat. But the increase is not confined to wheat ; everything except barley shows a greater acreage. Taking everything into consideration, something like 500,000 acres more than last year are under cultivation.

The official figures for the Territories have not yet been issued, but as the increase in immigration into that part of the Great West has been much larger than into Manitoba, it naturally follows that the increase in the acreage there will be proportionately greater.

Taking agriculture in all its ramifications—cereals, fodder, cheese, butter, etc. —it may be expected, on a moderate estimate, that the earning powers of the farms of Manitoba and the Northwest Territories will this year be increased by at least $1,000,000. This divided among a population of about 600,000 is by no means insignificant.

The statistical estimates for the Province of Ontario have not yet been issued, but the report in regard to the condition of the crops is on the whole of a most satisfactory character, and the bountiful rains which have fallen since the report was issued have certainly greatly improved the situation from what it was a month ago.

At present there is every prospect of 1903 being a prosperous year for Canada. The agricultural prospects, as we have already shown, are most promising. They certainly were never more so. The unusually large influx of immigrants and the expanding of railway construction in the Great West must necessarily mean a large increase in the consumptive requirements of the country, both in the way of constructive material as well as in food products.

Besides the home market, however, it must be remembered that there is a demand abroad for everything that our fields and farms can produce, while in all our staples there is a gratifying increase in the export trade. In farm products of all kinds the increase during the nine months of the present fiscal year, compared with the same period last year, was $16,398,-585 ; in products of the forest over $2,-500,000, and in manufactured goods nearly $2,000,000.

All told, the export trade in domestic produce for the nine months was $162,-420,763, or nearly 8,000,000 more than during the same period in 1902.

In imports there was an increase of nearly $15,000,000 during the same period, showing that our ability to buy as well as to sell is greater than it was a year ago.

Our factories are still busily employed, and the most important of them have orders for several months ahead ; in fact, notwithstanding the rapidity with which our manufacturing industries have expanded during the past decade, the consumptive capacity of the country has increased in a greater ratio.

There is also a scarcity of skilled labor, and in fact unskilled labor as well, in nearly every part of the Dominion.

The mining industry in British Columbia, on account of the labor disputes, has been in an unsatisfactory condition for some time. This has been the only cloud on the Canadian trade horizon for a long time, but even in this particular the conditions are improving. In the coal mining industry on the Atlantic coast, on the other hand, the conditions were never as favorable as they are to-day. The lumber industry in all parts of Canada is in a flourishing condition and there is every indication of an active trade in this line for some time to come.

The general favorable condition of trade in Canada is also reflected in the earnings of the railways, which continue to increase. During the five months of the present year ending May, the earnings of the Grand Trunk Railway and the Canadian Pacific Railway show an aggregate increase of over $1,000,000, compared with the same period last year.

The bank clearings for the same period also show an increase, notwithstanding the tendency to the curtailment of trade on account of the falling off in business in the speculative market. The fact that the failures during May were very much less than for the corresponding month of 1902 is also a favorable evidence of the condition of trade in this country.

The lack of confidence in the stock market, which is the outcome of the collapse of the speculative boom, cannot of course be expected to un-influence the general trade and commerce of the country. In reality, however, this should not seriously affect the general trade of the country, for it must be remembered that the chartered banking institutions were never in a healthier or better condition, while back of all this is the generally prosperous state of the country.

LOYALTY IN TRADE.

IS there as much loyalty to each other on the part of the retail and wholesale trade as there should be ? Does the jobber do his best to protect his customers from the competition of catalogue concerns, or price-cutting firms? Is it not too often the reverse, that the jobbers, after receiving an order from a retailer in a town, follow this up by selling goods to a manufacturer or a mill-man who had been the retailer's customer, at wholesale prices ?

On the other hand, do retailers appreciate loyalty on the part of the jobber, and are they loyal to those who protect them, who stand by them? There are two sides to the question, and in many cases both retailers and jobbers can, without disadvantage to themselves, show greater regard for the interest of the other.

In a letter to an exchange, E. C. Atkins & Co., Indianapolis, Ind., state that they make it a rule not to solicit or even take orders from catalogue houses. They have taken this stand in deference to the interest of the regular retailer. If retail dealers throughout Canada took note of the goods that are offered at cut prices by the catalogue houses and were loyal to the jobbers and manufacturers whose goods are not so advertised, a strong influence would be ever at work toward the preservation of fair prices for the regular retailers.

TRADE IN COUNTRIES OTHER THAN OUR OWN.

Iron Situation in the United States.

IT is still a waiting market, with the advantage generally in favor of the buyer. As long as specifications on existing contracts are good, the mills may be expected to be complacent while the market drifts. The test is yet to come. Meantime the United States Steel Corporation has canvassed the situation on its leading products, and in conjunction with other manufacturers of rails will probably make early announcement of the basis for 1904. Unless some unfavorable development not now in sight should intervene, the probabilities are that plates and structural material will remain at 1.60c. at Pittsburg mill for 1904 business. The effect of strikes in cutting off consumption cannot now be measured; but the disposition of workmen in many lines and districts to carry wages still farther upward when the wave of prosperity is manifestly reflowing, is certain to bring complications. Statistically the iron trade is still in a strong position. Pig iron production is at record figures, and all the iron made is entering into consumption, while the present month is expected to bring the end of the importations apart from straggling lots. Some furnaces are facing prices for iron that on the higher basis for ore and coke, as compared with their contracts in the early part of 1903, leave them less leeway, and if the downward movement goes much farther some of these will be out of the reckoning. Foundrymen do not appear ready to take hold, as yet, and the price fixed by Southern furnaces has not attracted buying.—Iron Trade Review, June 12.

United States Nail Market.

Wire Nails.—There is a fair quantity of nails being distributed on contract specifications and new orders, under the present condition of labor strikes in building trades. It is also the season when demand usually falls off. The market is firm and more free from irregularities owing to jobbers underselling the manufacturers. Quotations are as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carload lots	$2 00
Retailers, carload lots	2 05
Retailers, less than carload lots	2 15

Cut Nails.—The output now is about equal to the demand, so that the difficulty of obtaining prompt shipments is practically over. The market is firm and quotations are as follows: $2.15, base, in carloads and $2.20 in less than carloads, f.o.b. Pittsburgh, plus freight in Tube Rate Book to point of destination; terms, 60 days, less 2 per cent. off in 10 days.—Iron Age, June 11.

United States Barbed Wire Market.

The bulk of demand appears to be about over for the season. Current orders are light, but specifications on contract orders are being received by the mills in fair volume. Quotations are as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv
Jobbers, carload lots	$2 30	$2 60
Retailers, carload lots	2 35	2 65
Retailers, less than carload lots	2 45	2 75

—Iron Age, June 11.

Liverpool Tinplate Market.

The market during the past week has been very quiet. Of course, the holidays have interfered with business to a certain extent, but apart from this, the trade at present is in a very depressed state. A "stop week" is talked of, but unless all the mills close down, and we doubt if many of them can do so owing to existing contracts, it will not help matters very much. Values of most lines are again a shade lower on the week. Full weight Bessemer cokes in I C 14 by 20 have been booked at 11s. 9d. and 11s. 10½d. per box, f.o.b. Wales, and 12s. 3d. per box, f.o.b. Liverpool. Makers' quotations range as follows:—Bessemer cokes, I C 14 by 20, 112 sheets, 108 lb., 11s. 10½d. to 12s. 1½d. per box; Siemens Martin steel, 1½d. extra; 100 lb. substance at 1½d. to 3d.; 95 lb. at 3d. to 4½d.; 90 lb. at 4½d. to 6d. reduction.

Blackplates are in fair demand, and for this class of plate prices keep fairly steady. For ordinary specifications of pickled, cold rolled and annealed, 30 gauge, works quote £9 2s. 6d. to £9 5s. per ton, f.o.b. Welsh ports.

Terneplates have been sold as low as 22s. per box (I C 28 by 20, 112 sheets, 216 lb.). Some of the favorite brands, however, command more money. The inquiry is moderate, and a small trade is reported. Quotations at present stand:—I C 28 by 20, 22s. 3d., 22s. 6d., and upwards, f.o.b. Wales.—Iron and Coal Trades Review, June 5.

Pig Iron Position in Germany.

Advices from Germany say that the less favorable reports from the United States have created a certain amount of disquietude in the Rhenish Westphalian iron industry, and, as a consequence, the concluding week of May was characterized by a slight diminution in the general demand. In the case of pig iron business continues active, and the iron works are able to rely upon sufficient employment for several months to come, owing to the considerable quantity of work on hand as afforded by orders already on the books and those resulting from the increased inland demand. Too much emphasis, however, cannot be laid upon the fact that the further development of the pig iron market entirely depends upon the question as to whether America will continue to be receptive in the future, or whether a setback will take place.

The Pittsburg Metal Market.

Iron Trade Review, June 17, 1903.

THE striking feature of the iron and steel market is the great strength shown in the face of very light transactions in both raw and finished materials. Furnaces show no signs of being under pressure; offerings of crude steel are very light, and finished material is moving slowly, being affected by strikes in various sections. The pig iron market is still a waiting one, but indications for good business are more reassuring. Buying of steel-making pig continues to be of small lots for early shipment, and while this does not show a great deal of confidence in the future, it indicates that steel works are short of pig iron, so that the position is statistically very sound. In foundry iron there is a noteworthy increase in inquiries, and buying is likely to be resumed very shortly.

The arrangement between the leading sheet interest and the roofing and corrugating association is to be terminated next week at the instance of the former, because, as reported, it has worked a discrimination against other large buyers not included in the association. The agreement will be replaced by another which will take cognizance of the relative importance of the volume of business of different buyers.

There is phenomenal activity in the tin plate industry, the current production being much the heaviest on record, while tin plate for any delivery up to August commands a premium of from 15 to 25 cents a box, or $3 to $5 a ton. We find 299 tin mills in full operation, broken only by a shortage of steel here and there, the leading interest having every one of its mills in operation, and the independents also running wherever they get steel. The leading interest has five plants idle, but they are not regularly operative plants, being in some cases nearly dismantled. Not a single mill which it is ever expected to operate is now idle. The usual fall dullness will of course come, but only after the canning season is over. The canning season is the best for several years.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, June 19, 1903.

HARDWARE.

THERE has been a good volume of trade in general hardware during the week, and jobbers and shippers generally are now in better shape regarding their orders, though there is still something to be desired in regard to promptitude from the railways in the matter of forwarding shipments. There have been few changes in value during the week, about the only important one being an advance in certain descriptions of horseshoe nails, which are quoted higher below. Cotton rope has also made another advance. Other lines record no special change, but there is a fair quantity of galvanized wire moving, while cut and wire nails contribute business of noticeable volume. Horseshoes are fairly active and without change, while there is a fair inquiry experienced for rivets and burrs, bolts, screws, and similar material. Cordage is strongly held all round, and there is a good movement in building paper and cement.

LAWN MOWERS.—Do not furnish any feature. We quote: 10-in. wheel x 12-in. cutter, $7.50; by 14-in. cutter, $8.00; by 16-in. ditto, $8.50; by 18-in. ditto, $9.00; by 20-in. ditto, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch. do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—Business is of smaller volume. We quote: $2.80 per 100 lb. f.o.b. Montreal, and $2.55 f.o.b. Cleveland. Carlots of 15 tons are quoted f.o.b. Cleveland at $2.45.

GALVANIZED WIRE.—There is a quiet trade noted. We quote as follows: No. 5, $3.70; No. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—The movement is restricted to small lots. We quote: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE STEEL WIRE.—Without change. We quote: 25 per cent., with extras: 1 and 2-lb. hanks, 25c. per 100 lb.; ½-lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—Only a small business is noted with discounts 60 per cent.

PRESSED SPIKES.—A few small orders are coming in. Discount remains at 20 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

FENCE STAPLES.—There is a moderate demand for these. We quote: $3 per 100-lb. keg for galvanized and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

CUT NAILS.—New business is small, as buyers are not anxious. Prices remain at $2.45 per keg f.o.b. Montreal.

WIRE NAILS.—Trade is moderately active in these, with prices steady. We quote carlots at $2.40 and small lots at $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

HORSE NAILS.—Are held somewhat firmer for certain descriptions, and there is a fair trade between first and second hands. We quote: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 57½ per cent.; "C" brand, 40, 10 and 7½ per cent. off; "Monarch," 50 and 7½ per cent., and "Peerless," 50 per cent.

HORSESHOES.—Furnish a fair trade. We quote: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; X L steel shoes, new, light pattern, sizes 1 to 5, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35; toe weight, all sizes, 1 to 4, $6.60. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—These are quiet and prices unchanged. Discounts are as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off, and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—A fair jobbing demand is experienced. Discounts are as follows: Norway carriage bolts, 55 per cent.; common, 50; full square carriage bolts, 55 per cent.; machine bolts, 50, and 5; coach screws, 66 2-3; sleigh shoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5; bolt ends, 50 and 5; plough bolts, 50 and 5; tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3½c. per lb. off list; hexagon nuts, 3¾c. per lb. off list.

SCREWS.—Quiet business passing. Discounts are: Round head bright, 82½ per cent.; flat head bright, 87½ per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

CORDAGE.—Cotton rope continues firm and other cordage is strongly held also. We quote: Pure manila, 14½c.; British pure manila, 12c.; sisal, 11½c.; double lathyarn, 11½c.; cotton rope, 16½c.; cotton twine, 17 and 20c. for 3 and 4 ply.

BUILDING PAPER.—There is a fair movement in this material. We quote as follows: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O K and I X L, 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

SHOT.—Still asked for in a sorting way. We quote: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7.00 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount, 15 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

FIREBRICK.—Firmly held. We quote: $16 to $22 per 1,000 for English and $17 to $22 for Scotch, as to brand.

CEMENT.—Still moving freely We quote: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl. ex-store, and American, $2.20 to $2.40 ex-cars.

remark that makers do not worry over the fact, pointing out that buyers are as liable to lose as profit by holding off in view of the fact that iron from most reliable indications is being consumed as fast as it is being produced. In tin plate the situation in the States is a peculiar one, as, despite the heavy production there, they stand with a scarcity existing for spot and early deliveries of coke tin in spite of the fact that every available mill in the Pittsburg district is being run to its full capacity. In fact, many signs point to the condition that the turn has not yet been reached in the general iron situation. Cables from England and Wales do not record anything new in regard to Canada plate, tinplate or galvanized iron. In copper consumers are beginning to show an increased interest, and recent cables regarding the European situation have been firmer, which tends to make buyers more confident. The same can be said of spelter and also of pig tin, the shipments for the first half of June being much less than the bears estimated they would be, so that the metal has a distinctly stronger tendency for prompt and nearby delivery.

PIG IRON.—Foundrymen have been running on very low stocks, and it is not at all certain whether the policy will be as profitable as they expect it to be. Of late, some buyers have shown some desire to purchase from stocks in store here at quoted prices, but there is nothing doing in large way on forward account. We quote: Carron, No. 1, $21; do., No. 3, $19.75; Middlesboro', No. 3, $17.75; Ayersome, No. 1, $20; do., No. 3, $19.40.

BAR IRON.—There is no change. We quote as follows: Merchants' bar $2; horseshoe iron, $2.25 and forged iron, $2.30.

BLACK SHEETS.—These are going forward well with prices steady. We quote: 28 gauge, $2.45; 26 gauge, $2.40; 22 to 24 gauge, $2.35; 18 to 20 gauge, $2.30 and 8 to 10 gauge, $2.40.

GALVANIZED IRON.—A good movement is in progress. Quotations are: 28, Queen's Head, $4.40; Apollo, 10¾-oz., $4.30; Fleur-de-Lis, $4.15; Comet, $4; Bell brand, $4.05. In less than case lots, 25c. extra.

LEAD PIPE.—Without alteration with trade quiet. We quote 8c. for composition waste and 7c. for ordinary, with 30 per cent. discount.

IRON PIPE.—Remains the same. We quote as follows: Standard pipe, per 100 ft., in lengths under 19 ft.: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85, ¾, $3.65; 1-in., $5.20; 1¼, $7.35; 1½, $8.95; 2-in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.45; ½, $3.85; ¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2-in., 416.85. Extra heavy pipe,

plain ends, are quoted per 100 ft. as follows: Black, ½, $4.20; ¾, $5.25; 1-in., $7.55; 1¼, $10.55; 1½, $12.75; 2-in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1-in., $9.55; 1¼, $13.25; 1½, $16; 2-in., $21.90. For threads and couplings on extra heavy 5 per cent. net is added. Trade discount, 5 to 7½ per cent.

TINPLATE.—There is nothing very special over the cable this week, and prices are held unchanged under a fair demand at $4.25 for charcoal and $4 for cokes, the latter figure having been shaded in some cases for round lots.

INGOT COPPER.—Strength is still the feature on outside markets in this metal, and values here rule strong at $15.50 to $15.75.

INGOT TIN.—This metal has exhibited a firmer tone since last report, but there has been no change in spot prices, which range from $33 to $33.25.

PIG LEAD.—Has ruled somewhat easier and the range is now quoted at $3.15 to $3.25.

STEEL.—In fair request. We quote: Mild, $2.05; sleighshoe, $2.10 to $2.20; tire, $2.15 to $2.25; spring, $2.85 to $3; reeled machinery, $2.75 to $3; toecalk, $2.60 to $2.75; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.50.

TOOL STEEL.—Remains unchanged. We quote: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATE.—There is a good movement in these; prices steady. We quote: 52s, $2.60 to $2.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.15 to $4.55.

TERNE PLATE.—Continues unchanged at $7.25.

COIL CHAIN.—As last reported. We quote: No. 6, 10c.; No. 5, 9c.; No. 4, 8½c.; No. 3, 7c.; ¼-in., 6½c.; 5-16-in., $4.90; ⅜-in., $4.20; 7-16-in., $1; ½-in., $3.90; 9-16-in., $3.75; ⅝-in., $3.60; ¾-in., $3.50; ⅞-in., $3.45, and 1-in., $3.40, with 10c. allowance on carlots.

SOLDER.—Steady as last quoted at 20c. for bar and 19c. for wire.

ZINC SPELTER.—Firm in tone at $6.25 to $6.50.

SHEET ZINC.—Remains as last quoted at $6.75 to $7 as to gauge.

SCRAP METALS.

The tendency has been heavier on some lines of iron, but on others prices are unchanged. We quote: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $16 to $16.50; No. 2, $7.50 per ton; machinery scrap, $16 to $16.50; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6¼ to 6¾c. per lb.

RAW FURS.

Cables from London quote mink, lynx and otter 5 to 10 per cent. lower. Prospects in raw furs are for other declines, although the declines will not be large. Spring muskrats have now about ceased to arrive. A number of changes will be noticed in our quotations this week. We quote:

		Large	Medi m	Small	Kitts	Fall Beave $2.00 to $2.50 per pound.		Spring Beav $3.00 to $3.25 per pound.

ONTARIO MARKETS.

Toronto, June 19, 1903.

HARDWARE.

IN spite of the healthy commercial conditions prevailing, the market has been to some degree affected by the financial crisis of the past few weeks. It is clear, however, that the feeling of hesitation, almost pessimism, that resulted from these conditions, has been to a large degree cleared away, and the more the situation is examined the more satisfactory the verdict. The consumption of practically every line has been so much in excess of expectations, that manufacturers of such lines as spades and shovels, cheap locks and knobs, hinges of all kinds, some lines of churns, washing machines, some sizes of screws, bolts, nuts and washers and other staple goods have been and are unable to fill orders promptly. Manufacturers of bolts are refusing orders for some sizes of bolts for delivery within six weeks. The same conditions seem to prevail in both the United States and Great Britain—the two countries which most closely affect Canada. The fact seems to be that manufacturers have not had the confidence in the season that events have proved they might well have had. It seems, moreover, from the metal market reports, that a similar hesitation and lack of confidence seem to prevail at the moment. Manufacturers are now buying their raw material from hand to mouth, thus running the risk of another shortage of supplies, such as they complained of early this year. In short, the market conditions seem to warrant a greater feeling of confidence than apparently exists. The tendency of prices is still upwards. Horse nails have advanced; countersunk discounts now being 57½ per cent. Other lines show no change.

BARB WIRE.—Some orders are still coming in. The base price is $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

GALVANIZED WIRE.—There is a fair movement; prices same. We quote as follows: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots and at $2.15 in carlots.

SMOOTH STEEL WIRE.—A fair trade is doing. The base price is $2.50 per 100 lb. Oiling 10c.; coppering 60c.; and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

COIL SPRING WIRE.—A moderate business is still reported. Prices firm. We quote as follows: No. 9, $2.75; No.

11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less, with freight up to 20c. allowed.

WIRE NAILS. A good demand is noted; deliveries more liberal. We quote: Carlots, $2.40 and small lots, $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—An excellent demand keeps up at $2.50 per keg f.o.b. Toronto.

HORSE NAILS.—The market is decidedly strong. The discount on "Countersunk" head is reduced to 57½ per cent. We quote as follows: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 60 per cent., and "Countersunk" head, 57½ per cent.; on "Peerless," 45 and 7½ per cent.

HORSESHOES.—Steady trade reported. We quote, f.o.b. Toronto: Iron shoes, No. 2 and larger, $3.80; No. 1 and smaller, $4.05. Steel, new light shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20. Snow shoes, No. 2 and larger, $4.05; No. 1 and lighter, $4.30. If shipped from factory, 10 to 15c. less.

SCREWS.—There is still a scarcity. A good demand is reported. We quote: Flat head bright, 87½ per cent. discount; round head bright, 82½ per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

RIVETS AND BURRS.—In steady demand. We quote: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55, per cent.; copper rivets, with usual proportion of burrs, 45 per cent

BOLTS AND NUTS.—The shortage has become so acute that at least two of the strongest mills are refusing orders for delivery within six weeks. We quote as follows: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron, ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

BINDER TWINE.—The market is stiff, with a good demand. Quotations are: 650 ft., 13c.; 600 ft., 12c.; 550 ft., 11¼c.; 500 ft., 10½c.

CORDAGE.—An active trade in rope, especially for hay forks. We quote: Pure manila, 14½c.; British pure manila, 12c.; sisal, 11½c.; double lathyarn, 11½c.; single lathyarn, 11c.; double shingleyarn, 11½c.; single shingleyarn, 11c.; sashcord, 25 to 30c.

LAWN MOWERS.—Trade about done, but some orders still coming in. We quote: Woodyatt, 12-in., $7.50; 14-in., $8; 16-in., $8.50; 18-in., $9; 20-in., $10; Star, 12-in., $5.50; 14-in., $5.75; 16-in., $6; Daisy, 12-in., $4.90; 14-in., $5.10; 16-in., $5.30; Ontario, 12-in., $11.25; 14-in., $15.80; 16-in., $16.80; 18-in., $18.90; 20-in., $20.50; Philadelphia, 12-in., $6.50; 14-in., $7; 16-in., $7.50. Discount, 40 and 10 to 50 per cent.

SOIL PIPE AND FITTINGS. — A steady demand keeps up. Prices are unchanged, discounts being as follows: Light soil pipe, 45 and 5 per cent.; light soil pipe fittings, 50 and 5 per cent.; medium and extra heavy pipe and fittings, 55 and 5 per cent.; 7 and 8 in. pipe, 40 and 5 per cent.

BRASS GOODS. All lines in excellent demand. Discounts unaltered.

BUILDING PAPER.—A steady trade is doing at the advance. We quote as follows: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 95c. per roll; 3-ply, $1.20 per roll; carpet felt, $2.30 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 50c. per roll; tarred fibre, 65c. per roll, O K and I X L, 70c. per roll, heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

SCREEN DOORS.—A fair sorting trade is reported. We quote as follows: Screen doors, common, 2 or 3 panel, walnut stained, 4-in. style, $6.80; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

PLUMBING FIXTURES.—The demand keeps active, and some lines of earthenware stocks are light. Prices are steady.

RUBBER HOSE. — A shortage is threatened, so the advance is maintained. Lawn standard is now quoted at 5½c. per ft. for ½-in. and 6½c. per ft. for ¾-in.

FORK HANDLES.—There is a brisk business at the new discount, 50 per cent.

PRESSED SPIKES.—A fair trade is doing at the new prices. We quote per cwt. as follows: ¼-in. x 4, 4½-in., $4.75; 5-16-in. x 5, 6-in., $4.50; ⅜-in. x 6, 7, 8-in., $4.25; 7-16-in. x 7, 8-in., $4.10; ½-in. x 9, 10, 12-in., $3.90. The discount is 20 per cent.

TINWARE AND ENAMELWARE.—The demand keeps up excellently, all lines being in demand.

MILK CAN TRIMMINGS.—An excellent trade continues. Prices are unchanged.

CEMENT.—The demand continues active, absorbing all offerings, both of foreign and domestic production. A big demand is noted. We quote in carlots, Toronto, as follows: Canadian Portland, $2.50; German, $2.40 to $2.50; English, $2.30 to $2.50; hydraulic, $1.50. Small quantities are 15 to 25c. higher.

METALS.

The volume of trade being put through at the moment is unprecedented, but there seems to be a disposition on the part of many buyers to hold off in plac

WALTER GROSE, Selling Agent, Montreal.

Nicholson File Co.,
DOMINION WORKS, PORT HOPE, CANADA.

ing their orders for the last half of the year. Labor troubles have, by stopping several Toronto works, led to an accumulation of stocks in some lines, notably pig iron. Canadian smelters are consequently making concessions to bring buyers into the market. They are holding off, however, and some authorities claim that when they start buying there will be a rush, that there may even be trouble in meeting all requirements. However, at the moment prices are easy at 50c less than last week. At the same time prices have dropped 50c at Pittsburg. Copper and tin have strengthened during the week; lead is easier. Locally prices are unchanged except in iron.

PIG IRON.—Notwithstanding a strong statistical position and the knowledge that many buyers have not yet placed their orders for the last half of the year, the market is easy, both locally and in the United States. English prices seem to remain steady. A big business is doing for immediate requirements. We quote f.o.b. Toronto, Hamilton and Midland No. 1, $22; Sydney No. 1, $20; No. 1 Jarrow, $21; No. 2 Summerlee, $25.

BAR IRON.—Importations have been large and prices are being shaded somewhat, though no change is quoted. The base price is now $2. For extras, cut to length while rolling: 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

STEEL BOILER PLATES.—A steady trade is doing with the base price still $1.96 f.o.b. Toronto.

TOOL STEEL.—A big business is doing with prices firm: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8 to 9c.; Park's "Silver," 12 to 14c.; Park's "Special," 15 to 20c.

S. F. BOWSER & CO.

FORT WAYNE, IND.

TORONTO OFFICE: 65 Front St. East.

MACHINERY STEEL.—The activity continues, with prices firm at $2 to $2.05 f.o.b. Toronto.

COKE.—In good demand. Quotations range from $6.75 to $7.15 for 72-hr., and $5.50 for 48-hr. furnace coke, f.o.b. Toronto.

BLACK SHEETS.—Still in good demand. We quote: Common, $3.15 for 28 gauge and dead flat, $3.50 for 26 gauge.

CANADA PLATES.—Buying is more liberal and prices are well maintained. Import orders are coming forward freely. Prices are steady. We quote as follows: All dull, $2.90 to $3; half polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—An excellent demand continues, though strikes are, no doubt, affecting this line locally. Prices are steady and unchanged throughout. We quote as follows: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—There is still fluctuation, but the market is stronger owing to the strong statistical position. We quote $33 to $33.25.

TINPLATES.—Unchanged in both price and demand. We quote as follows: Charcoals, $4.75 to $5 and cokes, $4.25 to $4.50 per box.

COPPER.—The outside market continues to strengthen, but no change is noted locally. A good business is being done in both ingot and sheet. We quote as follows: Ingot copper, $15, and sheet copper, $21 to $22 per 100 lb.

BRASS.—Unchanged in price and in good demand. Discount, 10 per cent.

LEAD.—An active trade is reported. Outside markets are slightly easier. We quote: $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE.—An excellent trade continues, with prices steady. Our quotations are as follows: Per 100 ft.: Black pipe, ⅛-in., $3.15; ¼-in., $2.40; ⅜-in., $2.65; ½-in., $2.85; ¾-in., $3.65; 1-in., $5.25; 1¼-in., $7.35; 1½-in., $8.95; 2-in., $12.55; 2½-in., $20; 3-in., $23; 3½-in., $30; 4-in., $36.

ZINC SPELTER.—Outside markets are stiffening, but no change is reported locally. Prices are steady at 6¼ to 6½c per lb.

ZINC SHEETS.—We quote base price as follows: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

SOLDER.—In good demand. Prices are unchanged. Guaranteed half-and-half is quoted at 18 to 19c., and wiping 17 to 18c.

OLD MATERIAL.

This market is in very much the same condition as last week. The demand is fair. Prices remain firm at last week's quotations. We quote as follows: Heavy copper and wire, 11½c per lb.; light copper, 10c per lb.; heavy red brass 10½c per lb.; heavy yellow brass, 8½c per lb.; light brass, 6c; lead, 2½c; scrap zinc, 3¼c; iron, No. 1 wrought, $14 per net ton; No. 2 wrought, $5; machinery cast scrap, $16; stove plate, $11; malleable and steel, $7; old rubbers, 6¼c per lb., and country mixed rags, 50c per 100 lb.

TORONTO MONTREAL WINNIPEG

HIDES, SKINS AND WOOL.

Hides, Skins and Wool. ££lblblblb

There is no change in the market this week; prices are firm at last week's quotations. The hide market is fairly active. The calfskin market is quiet. The wool season is coming in, and an active market is expected. We quote:

HIDES.—No. 1 green, 8c.; No. 2 green, 7c. per lb.; No. 1 green, steers, 8½c.; No. 2 green, steers, 7½c. per lb.; cured, per lb., 8 to 8½c.

CALFSKINS.—Veal skins, No. 1, 6 to 14 lb. inclusive, 9c.; No. 2, 7c.; No. 1, 15 to 20 lb. inclusive, 8c.; No. 2, 6c. Deacons (dairies), each, 60 to 70c.; sheepskins, 40c. to $1.10.

WOOL.—Unwashed wool, per lb., 8 to 9c.; fleece wool, 14½ to 15½c.; pulled wools, super, per lb., 15c.; extra, 18c.

TALLOW.—We quote 5 to 5¼c. per lb.

PETROLEUM.

There is no change in the petroleum situation. The market is very quiet. Prices are unchanged. We quote: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less.

MANITOBA MARKETS.

WINNIPEG, June 15.

TRADE in all lines continues steady and active, but no change in price is reported for the week. The lines mainly in demand at present are building, hardware and structural iron of all kinds. We quote:

Paper boxes, ½ pound	16c.
Paper boxes, ¼ pound	17c.

One to 5 tons, 1c. per pound less; 5 tons and over, 1½c per pound less.

—Iron Age, June 11.

WANT ASH AND HICKORY HANDLES.

EDITOR HARDWARE AND METAL,—

We would like to learn the names of the principal manufacturers of ash and hickory handles, for export to all parts of the world. We have labored under the impression that Canada is not largely wooded with hickory and ash. What can you tell us about it? What also is the quality of Canadian timber. Should think it would be tough and heavy, being grown in cold climate.

SURPLESS, DANN & CO.

New York, June 10, 1903.

Remarks:—Four of the largest manufacturers of ash and hickory handles in Canada are Cameron & Dunn, Strathroy; J. H. Still & Co., St. Thomas; W. C. Crawford, Tilbury; The Columbia Handle Co., London. The bulk of their product, we understand, is used for domestic consumption, yet there is a considerable export, Canadian handles bearing an excellent reputation on account of their superior quality.—Ed. HARDWARE AND METAL.

NEW TIN PLATE CLEANSER.

SUPERINTENDENT A. J. MASKREY, of the Laughlin tin plant, has just been granted a patent upon a new appliance that will do away with the brander in the tin house, says The American Manufacturer. The brander, or, as it is more commonly known, the cleaner, is a great cause for annoyance as a result of the large amount of dust it raises, thereby producing a very unsanitary condition that has much to do with the scarcity of tinners. Mr. Maskrey goes about the matter in an entirely different manner, cleaning the plates as they come from the tinning pot and producing no dust. In place of a dry process he uses the opposite. As the plates come from the tinning pot they pass through a box arrangement containing a set of disc rolls, around which circulates a stream of water, which is in reality a soapy solution. This is heated to 180 degrees and plays upon both sides of the plate. This completely eats away the grease and the dirt. The sheets next pass through a pair of gum rolls and over a natural gas burner, which thoroughly dries them.

By this process there is resulting no plates with bad corners or edges, which will mean a big saving in a year's time. The next few weeks will probably see one of the machines attached to one of the pots in the Laughlin tin house and a practical test given the apparatus.

KEYS

SPECIAL JUNE OFFER

No. 1 Assortment, 3 Gross, put up in neat wooden box, $5.35, express prepaid to any point in Canada for orders received before June 30th.

Heretofore, many Hardware Merchants have been disinclined to handle Keys, owing to the difficulty of obtaining the proper assortment of lines. To meet this need we are placing our No. 1 assortment on the market.

This assortment contains three gross of the leading patterns of Rim, Mortise, Till, Chest, Cabinet, Trunk and Wardrobe Keys, all of which will be found ready sellers.

Our price is ridiculously low, only $5.35 per box, or less than 1¼c. per key, and, as the average selling price would be 10c. or more, the profits are large, and the cost of the entire investment would be met by the sale of fifty keys.

Your stock can be replenished from time to time as required, and keys can easily be made your most PROFITABLE side line. Send a postal request for our complete 1903 catalogue, 262 pages and over 1,200 illustrations.

INDUSTRIAL GOSSIP

THE Delta Upsilon Chapter House, Limited, have been incorporated with $15,000 capital to acquire and maintain a residence and library for its members. The directors are, R. J. Younge, R. V. Le Sueur, G. W. Ballard, H. E. Dupuis, and S. P. Biggs.

* * *

The Phoenix Bridge Company, of Phoenixville, Que., have 200 men at work on the construction of the large bridge over the St. Lawrence at Quebec. Mr. Dean, the chief engineer, has stated that the company would, in order to complete the work, be compelled to expend fully a million dollars themselves in building a special workshop and in making other preparations.

* * *

The People's Heat, Light & Power Company, Fredericton, N.B., have secured power to acquire the franchises of similar companies doing business in New Brunswick. The only company named as likely to be acquired, is The Fredericton Gas Light Company. The New Brunswick Legislature, Public Works Department, is calling for tenders for a line of steel bridge at Buctouche, N.B.

* * *

John McKay, Sault Ste. Marie, Ont., has organized the Hermina Mining Co., Limited, and is applying to the Ontario Government for a charter, the intention being to seek copper in Ontario. Mr. McKay maintains there is a great future for copper mining in Ontario. The Osborne-Gates strike in Hutton township has, he states, been a great advertisement for Canada.

* * *

The Standard Drain Pipe Co., Limited, is erecting plant and installing machinery at New Glasgow, N.S. About 100 persons will be employed, and the finished product will be ready for the market about September. Drain pipe, drain tile, firebrick, red brick, culvert pipes, inverts, flue and stove linings, gully traps, electric conduits and fireclay goods of all kinds will be manufactured. Their main building will be 108 x 101 ft.

* * *

The Dominion Iron & Steel Company, Sydney, N.B., are not able to operate all their furnaces owing to the scarcity of coke, yet they are now producing 615 tons of iron daily out of the total capacity of 750 tons; also 700 tons of steel billets, out of a total capacity of 800 tons. Fifty additional coke ovens have now been completed, and it is expected that the company will soon be producing to its limit 750 tons of pig iron a day.

* * *

The Jarvis Concrete Machines, Limited, Toronto, have been incorporated with $40,000 capital to manufacture and sell concrete stone and foundations, cement and products thereof and machines for use in connection with the production of the above, and, for such purposes, to acquire the business, properties, patent rights, designs, patents and inventions of The Jarvis Concrete Block Machine Company. The directors are Edgar Beaumont Jarvis, William O. Watson, and William R. T. Parker, of Toronto.

* * *

C. S. Archibald, representing the Maritime Nail Co., Limited, and The Portland Rolling Mills Co., Limited, of St. John, N.B., has been in Montreal during the past few days. Mr. Archibald reports satisfactory crop conditions in the Maritime Provinces, where they have had several good showers. The people are much interested in the discussion of the steel duties in the House of Commons, and seem to be a large majority for raising the tariff in order to give the Canadian steel industry higher protection.

* * *

John Dixon, carriage builder in Toronto, has issued a writ against The Globe to compel it to cease publishing the following small advertisement: "Carriage and wagon workers, keep away from Toronto; strike on. (Signed) H. Thompson." This makes the fifth action of this description begun within a few months. None have as yet gone to judgment, but in one case an interim injunction was granted restraining The Mail from publishing the notice objected to until the case should be heard.

NOTES.

The Steele Furniture Co., Winnipeg, are erecting a five-storey factory on Fort street.

On their last pay day the Crow's Nest Pass Coal Co., Fernie B.C., paid $103,266.80 in wages.

A small new steel bridge with stone abutments will be erected over the West Branch, near Bolton, Ont. This will cost about $500.

It is reported that The Canadian Pacific Railway Co. will extend the Guelph Junction Railway to Goderich, Ont.

The Durham Mfg. Co., Durham, Ont., are erecting a plant 100 x 100 ft., the walls being built of cement blocks.

The Ladysmith Lumber Co.'s mill at Fiddick's Junction, B. C., has been destroyed by fire, the loss being placed at $25,000.

The Vokes Hardware Company, Toronto, have been awarded the contract for additional ventilation in St. Lawrence Market, at a cost of $775.

Considerable excitement has been created in the Rossland, B.C., district over the discovery of a rich pocket of gold ore. One chunk of gold found was valued at $7,000.

On account of the difficulty of obtaining good coke for fuel, the Crofton Smelter, Vancouver Island, has shut down for a time. However, the smelter has not ceased purchasing ore.

The Harrison asbestos mine, near Bridgewater, Ont., has been opened by an American company, who are milling day and night by water power. Additional machinery will be installed.

The Copper King Mine, Kamloops, B.C., has a thousand tons of ore ready for shipment, so a siding two miles long is being built from the C.P.R. for shipment of the ore to the Crofton, B.C., smelter.

The Britannia mines, Howe Island, B.C., have been sold to Geo. H. Robinson, Butte, Montana. It is reported that Mr. Robinson will develop the properties on a large scale, even to the possible erection of a smelter.

One of the most important transactions in coal areas which has taken place in Nova Scotia for some time was made recently when The Cumberland Coal and Railway Co. purchased 31 square miles in the immediate neighborhood of Spring Hill.

Mr. Archibald says that in their own mills his firm have used Dominion steel and found it perfectly satisfactory. He feels sure that it only needs a trial of the products of The Dominion Steel Co. to convince all Canadian iron and steel manufacturers that the domestic raw material is as good as can be obtained elsewhere.

The South Valley copper-gold mine, Howe Island, B.C., has been sold to a syndicate of London and Paris capitalists, the purchase price being, according to report, $250,000. The properties are to be developed at once. F. J. Cleary, of Vancouver, who formerly had an interest in the mine, had spent $16,000 in developing it.

The Vermillion Bay Mines Company, incorporated in Delaware, U.S., have been licensed to carry on business in Ontario, the capital used there not to exceed $50,000.

About $7,000 will be spent on a building for the plant which the White Bear Mining Company are erecting at their works near Rossland, B.C. Machinery is being sent forward to it from Montreal

A London, Eng., company, known as The Nova Scotia Collieries Co., Limited, with a capital of $1,000,000, has secured 26 square miles of coal areas at Inverness, Cape Breton. The property will be developed at once.

A power plant is to be erected on the Wahnapitae River, two miles below the station. A 1,000-h.p. generator will transmit electric power to Sudbury, Copper Cliff and elsewhere. The estimated cost is $100,000.

It is stated in Vancouver that Thomas Jones, of Sandon, B.C., has been instrumental in furthering a scheme by which a zinc smelter or refinery will be erected in Vancouver. Ores from the Slocan and Lynn Creek districts would be treated.

Geo. E. Drummond, of The Canada Iron and Furnace Company, Radnor, Que., states that the ore from an extensive magnetic iron property near Eganville, Ont., has been found to be of very high grade and will be well adapted for mixing with the ore from the company's property at Radnor.

The Barrie Carriage Co., Limited, Barrie, Ont., have been incorporated with $40,000 capital to manufacture and sell carriages, wagons and other vehicles. The directors are Fred A. Lett, John C. Irwin, H. H. Strathy, John R. Hambly, Fred. N. Warren, D. Bunker, N. Dyment, W. C. Hunter, all of Barrie.

The Standard Oil Company have declared a quarterly dividend of 20 per cent. on their capital stock. John D. Rockefeller, who owns $40,000,000 worth of stock, receives $8,000,000 income for the three months, which, if kept up for the year, would be equivalent to three per cent. on a capital of $1,000,000,000

The Loon Lake Iron Company, Limited, Sault Ste. Marie, Ont., have been incorporated with $3,000,000 capital to carry on a mining business in Ontario. The directors are John F. Carey, Escanaba, Mich.; Geo. Wagner, Marquette, Mich.; Samuel B. Martin, Patrick J Harte, and John L. O'Flynn, Sault Ste. Marie, Ont.

The Imperial and General Agencies, Limited, Toronto, have been incorporated with $50,000 capital to carry on a manufacturers' agency business, taking over the Corporation of Colonial and General Agencies. The directors are John I. Davidson, Edward Stanger, Robert D. Harling, Edward Still, and James R. Adamson, all of Toronto.

The King Edward Mine, Limited, Bruce Mines, Ont., have been incorporated with $200,000 capital to carry on mining and reduction operations. The directors are, A. S. Burrows, J. S. Dobie, W. R. Smyth, C. J. Brown, and B. G. Coryell.

A new experiment in road building is proposed in Washington, D.C., by brick manufacturers. Owing to the prevalence of heavy mud between their works and the city, great difficulty has been experienced in sending the wagons to their destination, especially in rainy weather.

The M. J. Wilson Cordage Co., Limited, Chatham, Ont., have been incorporated with $55,000 capital to manufacture and sell binder twine, rope and cordage. The directors are, Michael J. Wilson and George McGarvin, Harwich, Ont.; Thomas Wilson, Richard Cochran and Richard W. Baldwin, of New York.

The Cluxton Gas & Oil Co., Limited, Chatham, Ont., with a capital of $100,000 are incorporated to produce petroleum oil and natural gas and to transport and market them. The directors are Fred C. Cluxton, Albert B. Booth, Robert J. Gaffney, and Peter D. McKellar.

Pig Iron in Great Britain.

This market is dull, but its general conditions are not less favorable than those of last week, allowing for the diminution in business caused by the holidays. On the contrary, although warrant prices are irregular, makers' quotations show little change, and are, in some cases, a trifle firmer; for example, the lower qualities of Cleveland iron. While No. 3 foundry remain at about 46s., the price we quoted last week, forge iron is in somewhat short supply, and whereas it could be bought a short time ago at 3s. or 4s. below No. 3, the difference is now the normal one of only 1s. Another favorable feature of the pig iron situation is to be found in the exports. Although the shipments to America have practically ceased, the exports to other countries have gone up. Last month the continental shipments from the Tees showed a considerable increase on the May figures for last year, and the deliveries to Scotland from that centre were also heavy. In fact, the total deliveries were almost as good as when the United States were taking large quantities. Weaker prices are, however, noticeable in some directions, and there is a good deal of underselling in Manchester. With the commencement of this month, Lancashire makers have discontinued the 2½ per cent. discount on their present list quotations. —Iron and Coal Trades Review, June 5.

PAINT, OIL AND BRUSH TRADES

SYSTEM IN PAINT SELLING.

By Henry Dexter Smith, Manager Promoting Department, The Sherwin-Williams Co.

There is probably no old-established line of merchandizing that has developed and improved to so great an extent in the last decade as the paint business. The old time paint store, with its unattractive and unbusinesslike exterior and its dark, cluttered up interior, has been gradually dying out ever since the advent, some 20 years ago, of prepared paints, ready for use. Before then the major part of the stock, being lead, oils, "turps," colors, etc., in bulk, made the business anything but pleasant, and put down all attempts at system, orderliness, or cleanliness even. But prepared paint brought attractively labeled packages, a stock conveniently handled and easily arranged, cleanliness, and, best of all, profit. It also brought advertising and wide awake business methods, so that before long the paint dealer swept down the cob webs, cleaned his windows, changed the copy of his newspaper ad, and began to be prosperous.

It took about 20 years to lay the foundations. In the last ten the results have been more apparent and widespread. To day it's a pleasure and a privilege to sell paint. Prepared paint is firmly established on its merits and has made conditions such that the paint dealer is most often the most progressive merchant in his town. The modern paint man is a successful business man, with good system, and good methods backed up by a good line of goods.

There is no end to the part system plays in paint selling. It begins with the choice and arrangement of the stock and doesn't stop even after the customer has been sold.

The man who means to put his paint business on a systematic, money making basis must start with the firm determination to stick unswervingly to good quality goods. The day of "cheap" paints is past. The consumer has learned, from bitter experience often, that true economy isn't found in the paint that sells at the lowest price per gallon, and the dealer has learned that best paints sell best. Good quality is the only safe foundation to build your paint system on.

After quality come many necessary methods—the purchasing system, the arrangement and movement of stock, the training of clerks to become paint experts, the handling of the window displays and the advertising furnished by the manufacturer—these and many others are important factors in the success of a paint store, but to talk about them adequately would require a separate story for each one, and would still leave untold the more detail system which is desirable. As it is there's space for only a brief description of a few of these details.

The slogan of one well known company of paint manufacturers is, "The way to get business is to go after it, and the way to go after it is to get it." It's the principle of the present day push and aggressiveness, and has taught the paint dealer he must come from behind his counter, and outside his store if he wants to win success. Paint selling has this advantage over the selling of many other articles at retail—you can legitimately go out after the business, solicit it personally; you don't have to confine your efforts to the newspaper or the mail.

Houses that need painting, houses that are planned or being built, houses that are being repaired and improved, all need paint. The wise dealer doesn't wait for the owners to come to him, he goes to them; and in doing so the more system he uses the bigger the results.

A trial card system outfit, the "tickler" plan, should be used by every paint dealer in following up the possible buyers. On April first he learns that John Jones expects to paint his house. He sends his outside man to call on him and learns that the painting will probably be done on May first. He also learns the name of the probable painters. The dealer wants that order and doesn't mean to leave anything undone that will land it. He first tries to interest John Jones; he next sees the painters; he notifies the manufacturer of the paint he handles. But he can't risk the order on the work of one day only, and so uses a card (Figure I) in his "tickler."

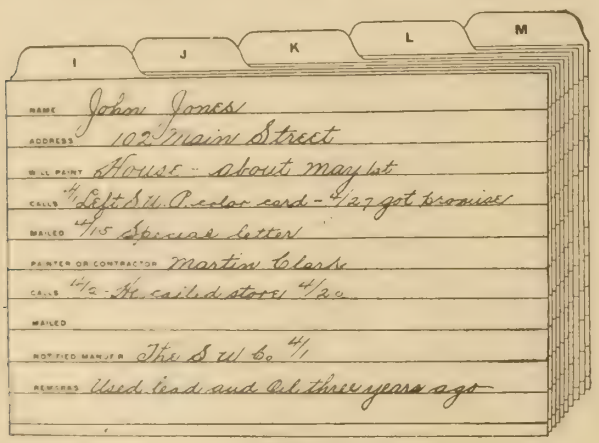

FIGURE I

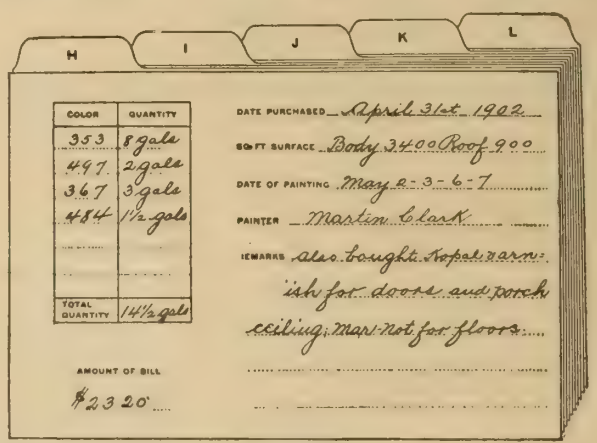

FIGURE II

It's the simple method so well known to all

Held up for Your Approval

A poor article is no bargain at any price. Doubtless the expert painter realizes this truism about as much as anybody in the world; with him a poor out-of-date brush, upon which he has to spend time in winding by old fashioned methods, means loss of money and inferior work to his detriment.

Boeckh's Flexible Bridled Paint Brushes

are the kind that are stocked by progressive Dealers, because they are demanded now by all progressive Painters.

—The bridle can be easily removed and replaced; it is not affected
—by water, oil or paint; it works on a pivot, and keeps the

systematic manufacturers, but not often applied by the small retailer.

With the order landed the reverse side of the card (Figure II.) comes into play. Here is entered the amount of paint purchased, the colors used, the number of square feet of surface to be covered, actual date of painting, total amount of bill and name of painter. The card is then alphabetically filed under the owner's name. It forms a record that will be of great value for future reference in many ways, as any paint dealer will readily recognize.

Many dealers supplement this record by obtaining a photograph of the house after it is painted. Such photographs—they need only be photographs taken by a clerk—if mounted in a book, or in a frame under glass, make the best of evidence to present to prospective customers. A number of dealers known to the writer have collections covering many years, each picture and its original bearing undisputed evidence that the paint sold gives the right results.

Another simple system, one that dove tails nicely with the card record, consists of a daily weather report covering the painting seasons. The successful application of good paint depends upon the condition of the surface and the state of the weather immediately before and during the painting. It is well, therefore, for the paint dealer to know just what the conditions were when the paint he sold was applied. By referring to the card record for the date of painting and to his weather report for the state of weather, he is in a position at any time in the future to make positive statements regarding adverse painting conditions.

The paint dealer who puts these systems into operation will soon find that they develop and amplify themselves in ways that make them applicable to a great part of his business. He will soon be keeping his mailing list on cards, with a record below each name of the advertising that has been sent, whether by himself or the manufacturers to whom he furnishes duplicate copies in sheet form. He may even discard his old ledger system and substitute cards or loose leaf ledgers.—System.

INFORMATION ABOUT BENZINE.

The official definition of benzine is "a transparent, colorless, diffusive liquid, of a strong characteristic odor, slightly resembling that of petroleum." It is manufactured in two ways, one by distilling coal tar and the other by the distillation of crude petroleum. The latter process produces 1½ per cent. of gasoline, 10 per cent. of refined naphtha, 1 per cent. of benzine, 55 per cent. of refined petroleum or kerosene, 17½ per cent. of lubricating oil, 2 per cent. of paraffine, and 10 per cent. is lost in gas, etc.

One of the peculiarities of benzine is that it is non freezable. Its uses are many. It is used largely by printers and by cleaners, and as a substitute for turpentine is also used in the manufacture of cheap varnishes. Being a good solvent for rubber, it is much used in manufacturing rubber cement.

Benzine, naphtha and gasoline differ only in volatility, the latter being the most volatile. Gasoline is much used for running motors for launches and automobiles. The higher grades of naphtha are also used for motors. Benzine can be used for this purpose on a pinch, but is not very satisfactory.

The person who can invent a perfect substitute for benzine that will do the work and cost as little has a large fortune awaiting him. A number of things have been tried, but none has proved satisfactory. A mixture some time ago was invented that was cheap and satisfactory, but unfortunately it could not be kept liquid.

A VARNISH SUBSTITUTE.

A German invention consists in boiling for some time size and kerosene, and dissolving colophony in the liquid which has been separated from the residue. Six parts of size are boiled with 50 parts of kerosene until the forming scum, which has to be removed from time to time, assumes a brown tint; the solution is then filtered and 25 parts of rosin are dissolved in it. Colors incorporated with this mixture give a homogeneous and stable varnish, yielding a glossy and lasting coating, when applied to wood, iron, walls, glass, etc.

PAINT AND OIL MARKETS.

MONTREAL.

THERE has been an easier feeling in linseed oil, which has declined 2c. all round on previous quotations, while turpentine has had a further decline, in fact, the range is a wide one, ranging from 68 to 72c. in different instances as to quality. The movement of business has decreased somewhat now that makers have caught up with their orders, but there is still a fair volume of trade in progress. We quote:

There has been a good movement in these, and no further change in prices are to report in any line. Makers here are now gradually catching up with their orders, and the situation generally is more satisfactory. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $5 to $5.25; No. 1, $4.27½ to $4.87½; No. 2, $4.40 to $4.50; No. 3, $4.02½ to $4.12½; No. 4, $3.65 to $3.75, all f.o.b. Montreal. Terms, four months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$4.75 in casks and in kegs, $5.

DRY WHITE ZINC.—Pure dry, in casks, 6¼c.; in 100-lb. kegs, 6¾c.; No. 1, zinc, in casks, 5¼c.; in 100-lb. kegs, 5¾c.

WHITE ZINC (ground in oil)—Pure, 25-lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

PUTTY.—We quote: Bulk, in barrels, $1.60; bulk, in 100-lb. packages, $1.85; bladders, in barrels, $1.90.

LET'S TALK IT OVER

YOU ARE desirous of securing the paint trade in your locality.
YOU CAN do it if you handle the best paint.
WE ARE desirous of helping you.
WE CAN supply you with the best paint.
It's NAME is "Anchor" Brand.
It CONTAINS the best white lead in the world--Brandram's B. B. Genuine.
YOU MIGHT write and ask us all about it.
WE WILL be pleased to tell you.

ANCHOR BRAND H&P REGISTERED TRADE MARK

HENDERSON & POTTS

ESTABLISHED 1874.

Halifax and Montreal.

BRANDRAM BROS & CO BRANDRAM'S B. B. WHITE LEAD REGISTERED TRADE MARK MANUFACTURERS LONDON ENGLAND

DON'T PAY THE SAME PRICE !

When you order "C" brand Horse Nails, insist upon getting them and no other. Don't accept any other brand which may be substituted, and sent at the same price. Some dealers do this, we are sorry to say, because they can buy any other brand of Horse Nails than the "C" brand at a lower price and make a little more profit by substituting, and sending you at the price for "C" brand.

When you want the best Horse Nails, you want the "C" brand, and expect to pay the best price.

You don't want any other brand except at a considerable reduction in price. The Manufacturers are pretty good judges of the value of their own goods, and none of them value their Horse Nails, as judged by their own quotations, as being equal to "C" brand. Why should you pay any dealer the same price?

We get more for the "C" brand because they are worth more, and to you as a buyer, and to the Farrier as a consumer, they are worth more and will be found, by reason of their superior quality and greater durability, to be the most economical. We will appreciate your future orders for the "C" brand through any Wholesale Merchant.

RED LEAD.—Genuine red lead, in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities, $5.75 per 100 lb. No. 1 red lead, casks, $4.25; kegs, $4.50 and smaller quantities, $5.50.

LITHARGE.—Ground casks, 5c.; in less quantities, 5½c.; flake litharge, casks, $5.25; smalls, $5.75 per 100 lb.

LINSEED OIL.—Raw, 1 to 4 bbls., 57c.; boiled, 60c.; raw, 5 to 9 bbls., 56c.; boiled, 59c. Terms, net cash in 30 days. Delivered in Ontario, between Montreal and Oshawa, at 2c. per gallon advance.

TURPENTINE.—Single bbls., 71c.; 2 to 4 bbls., 72c. Terms, net casg in 30 days.

BENZINE.—25 to 26c.

SHELLAC VARNISH.—Pure white, $2.20 to $2.35; orange, $2.10 to $2.25.

MIXED PAINTS.—$1.20 to $1.40 per gallon.

CASTOR OIL.—8¾ to 9¼c. in wholesale lots, and ½c. additional for small lots.

SEAL OIL.—48 to 50c.

COD OIL.—35 to 37½c.

PURE CANADIAN PARIS GREEN.—Petroleum barrels, 15¼c. per lb.; arsenic kegs, 15½c.; 50 and 100-lb. drums, 16c.; 25-lb. drums, 16½c.; 1-lb. packages, 17c.; ½-lb. packages, 19c.; 1-lb. tins, 18c.; ½-lb. tins, 20c.

PURE ENGLISH PARIS GREEN.—Petroleum barrels, 14½c.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. paper boxes, 16c.; 1-lb. tins, 17c.

TORONTO.

There is an excellent demand for sun dries, but staples are dull. Turpentine is 1c higher at Savannah, but as the stocks which are now to hand were bought by jobbers at the lower figures, a reduction of 1c is reported here. Linseed oil is firm in England and although flaxseed is cheaper in Chicago a firm feeling is manifested here. The season so far has been a poor one for Paris green and repeat orders have not yet started to come in. White lead is not in brisk demand, but prices are fairly steady. Shellac is unusually firm, an advance of 3c being reported in New York, where the market is reported cleaned out of spot goods of all descriptions, which will consequently be firm for the next two or three months. Other prices are unchanged. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5.10 to $5.25. No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.75 to $5; ditto, in kegs of 100 lb., $5.25 to $5.50; No. 1, in casks of 560 lb.,

TURPENTINE.—Single barrels, 74c ; 2 to 3 bbls., 73c delivered Toronto, Hamilton and London, 1c less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

WINDOW GLASS.

MONTREAL.

There is a quiet movement in this material ; prices unchanged. We quote : First break, 50 ft., $2 ; second, $2.10 for 50 ft.; first break, 100 ft., $3.80 ; second break, $4 ; third break, $4.50 ; fourth break, $4.75.

TORONTO.

A fair stock trade is doing. Import orders are about in. We quote as follows: First break, 50 ft., $2 ; second, $2.10 for 50 ft.; first break, 100 ft., $3.80 ; second break, $4 ; third break, $4.50 ; fourth break, $4.75.

FIRM COPPER MARKETS.

The London market continues to rise, the closing quotation on spot yesterday being 12s. 6d. above that of Monday. Futures showed a more decided gain, closing £1 5s. higher than on the previous day. The New York market responded but feebly, the extent of the advance here being 5 points. A sale of 15 tons spot was made at 28.80c., and the market closed quiet at 28.80 to 29c. Powell's cable made the Straits' shipments for the first half of June 1,965 tons, of which 580 tons were to the United States, 1,075 tons to England and the remaining 310 tons to the Continent. The smallness of this showing was attributed in part to the fact that the steamer Hudson was at Singapore too late to have her cargo included in the figures for the half. According to conservative estimates, the total shipments in June will aggregate 5,000 tons.—N.Y. Journal of Commerce, June 17.

SHARP BREAK IN COPPER.

As expected, the London copper market broke sharply yesterday on the news of the decline in copper shares here. The English copper market appears to be more sensitive to fluctuations in the shares than to actual trade conditions, and its ups and downs are having little influence upon the metal market on this side. The latter, however, is distinctly weak as a result of the continued indifference of large buyers, and while as yet no change has been made in the official quotations, it is understood that they are being shaded. So far as can be learned there is no demand for large lots. An offer to sell 200,000 lb. electrolytic for July delivery at 14¼c. found no takers and did not elicit a bid. The nominal quotations on electrolytic as well as Lake are 14 to 14¾c., and casting is "officially" quoted at 14c., though desirable brands are obtainable at 13¾c.—N.Y. Journal of Commerce, June 17.

1903

BANK OF MONTREAL

ANNUAL GENERAL MEETING

HELD 1ST JUNE, 1903

(From The Gazette, June 2nd, 1903)

THE eighty fifth annual meeting of the shareholders of the Bank of Montreal was held in the Board Room of the institution at 1 o'clock yesterday.

There were present: Hon. George A. Drummond, Vice President; Sir William C. Macdonald, Messrs. E. B. Greenshields, James Ross, Charles Alexander, W. H. Evans, T. Irving, F. S. Lyman, K.C., James Kirby, K.C., G. F. C. Smith, James Tasker, Henry Dobell, R. Hampson, Michael Burke, E. K. Greene, Lieut.-Col. Prevost, A. W. Hooper, A. T. Taylor, Albert Piddington, M. S. Foley, D. Morrice, James Skeoch, and John Morrison.

On the motion of Mr. F. S. Lyman, Hon. George A. Drummond, Vice-President, was unanimously voted to the chair, in the absence of the President, Rt. Hon. Lord Strathcona and Mount Royal.

On the motion of Mr. Henry Dobell, seconded by Mr. James Tasker, it was agreed "That the following gentlemen be appointed to act as scrutineers: Messrs. F. S. Lyman, K.C., and G. F. C. Smith; and that Mr. James Aird be secretary of the meeting."

DIRECTORS' REPORT.

The report of the directors to the shareholders at their 85th annual general meeting was then read by Mr. E. S. Clouston, general manager, as follows:

The directors have pleasure in presenting the 85th annual report, showing the result of the bank's business of the year ended 30th April, 1903:

Balance of Profit and Loss Account April 30, 1902		$165,856 09
Profits for the year ended April 30, 1903, after deducting charges of management, and making full provision for all bad and doubtful debts		1,813,483 66
Premiums on new stock		965,468 00
		$2,944,807 75
Dividend 5 per cent., paid December 1, 1902	$600,000 00	
Dividend 5 per cent., payable June 1, 1903	620,000 00	
		1,220,000 00
Amount credited to Rest Account		1,000,000 00
Balance of Profit and Loss carried forward		$724,807 75

Since the last annual meeting, branches of the bank have been opened at Birchy Cove, Bay of Islands, Newfoundland; Raymond, Alta.; Collingwood, Ont.; Paris, Ont.; and Spokane, Wash., U.S.

The bank has acquired the property at the corner of Hollis and Prince streets, Halifax, and went into occupation in May last; and has also purchased the premises it has been occupying, under lease, at Amherst, N.S.

A special general meeting of the shareholders was held on January 7, 1903, at which authority was taken for the following purposes:

To increase the bank's capital by $2,000,000, making it $14,000,000.

To apply for an Act of Parliament to sub-divide the shares of the bank into shares of the par value of $100 each;

To appoint the first Monday of December as the date upon which the annual general meeting of the shareholders of the bank is to be held in future, instead of the first Monday in June, as heretofore.

The head office and all the branches have passed through the usual inspection during the year.

STRATHCONA AND MOUNT ROYAL,
President.

Bank of Montreal, head office, June 1, 1903.

ADOPTION OF THE REPORT.

Hon. George A. Drummond moved:—"That the report of the directors now read, be adopted and printed for distribution among the shareholders."

It is usual, he observed, for the presiding officer to make some remarks at this particular stage of the proceedings, but in view of the fact that we shall have another meeting in six months, under the new and altered date, it seems to me unnecessary to detain you with any observations of mine. I can only say that the statement now in your hands is, I

THE GENERAL STATEMENT.

			75,042,783 27
			$125,548,110 48

Bank of Montreal,
Montreal, April 30, 1903.

E. S. CLOUSTON,
General Manager.

am sure, one which you will all agree is extremely satisfactory. It shows the largest profits of any of the bank's statements for the last 25 years, although some indication may be drawn from the fact that in earning that profit, the business of the bank has enormously increased. In 1876, when the profit to which I have referred was realized, the assets of the bank—an indication of the business done—stood at $37,500,000, and to-day, according to the statement in your hands, they stand at $125,500,000 so that the old story is repeated, which is, that to earn an equal amount of profit, you must now do a very much larger business; in this case, three times or more. With these remarks I put before you the motion I have already made.

The motion was seconded by Mr. E. B. Greenshields, and it was carried unanimously.

Mr. B. A. Boas moved:—

"That the thanks of the meeting be presented to the president, vice-president and directors for their attention to the interests of the bank."

This was seconded by Mr. Charles Alexander, and was unanimously agreed to.

BY-LAWS ADOPTED.

It was moved by Mr. A. W. Hooper, seconded by Mr. A. T. Taylor:—

"That by-law No. 3 shall read as follows:—

"'III. For the management of the affairs of the bank, the shareholders, at each annual general meeting, shall elect, by ballot, a Board of nine directors, who shall be capable of serving as directors during the ensuing 12 months, or until they shall be replaced by their duly elected successors. Every such director at the time of his election shall be, and during the then immediately preceding 30 days shall have been, and during his service as director shall continue to be, the holder and absolute owner in his own and sole name and right (and not in any other right, or in trust for any purpose, person or party, or in trust simply), of not fewer than 100 of the paid-up shares of the capital stock of the bank. At every annual general election the outgoing directors, and each of them, shall be eligible for re-election.'

"And that by-law No. 11 shall read as follows:—

"'XI. The Board of Directors may, from time to time, appoint local directors for the management of the affairs of the branches of the bank, and may fix their qualifications and remuneration, define their powers and duties, and revoke their appointment; but no such local director shall at any time be appointed or serve as a local director unless he be, and during his service continue to be, a holder in his own and sole name and right (and not in any other name or right, or in trust for any purpose, person or party, or in trust simply), of not fewer than 20 paid-up shares of the capital stock of the bank.'"

This was unanimously concurred in, after which it was resolved, on the motion of Mr. R. Hampson, seconded by Mr. J. Kirby, K.C.

"That by-laws Nos. 3 and 11, as amended, shall go into effect on September 1, 1903."

Sir William C. Macdonald moved:—

"That the thanks of the meeting be given to the general manager, the inspector, the managers and other officers of the bank for their services during the past year."

This was seconded by Mr. James Ross, and was unanimously carried, the general manager acknowledging the compliment.

Mr. John Morrison moved, seconded by Mr. Albert Piddington:—

"That the ballot now open for the election of directors be kept open until three o'clock, unless 15 minutes elapse without a vote being cast, when it shall be closed, and until that time, and for that purpose only, this meeting be continued."

This was unanimously concurred in, and a hearty vote of thanks was then accorded the chairman, who acknowledged the same.

THE DIRECTORS.

The ballot resulted in the election of the following directors:—

R. B. Angus, Esq.
Hon. Geo. A. Drummond.
A. F. Gault, Esq.
E. B. Greenshields, Esq.
Sir William C. Macdonald.
A. T. Paterson, Esq.
R. G. Reid, Esq.
James Ross, Esq.
Rt. Hon. Lord Strathcona and Mount Royal, G.C.M.G.

At a meeting of the new Board on Tuesday, June 2, The Right Hon. Lord Strathcona and Mount Royal, G.C.M.G., was re-elected president, and Hon. Geo. A. Drummond, vice-president.

FOREST CITY GOSSIP.

Office of "Hardware and Metal,"
London, Ont., June 16, 1903.

IT is putting it quite mildly, and well inside the lines of truth and verity, to say that all branches of the hardware and metal trades in this city are having a record-breaking year. Tinsmiths, plumbers and steamfitters, brassfounders, nail and wire manufacturers, metal workers, iron founders, stove manufacturers, boilermakers, machine builders, and even the retail gunsmiths and locksmiths, are all briskly engaged at their various occupations, and executing orders received from far and near. There are no idle men in this city at present; the veriest clodhopper, who cannot lay claim to knowledge of any particular trade, can be found a job, either as laborer amongst the workers in the larger establishments, or as a hod carrier on some of the numerous tenements at present under construction. Skilled labor is at a premium, the demand being much greater than the supply, and thus intelligent, sober, industrious workmen are sharing in the profits of these abnormally good times.

* * *

A new representative for The McClary Manufacturing Co. has been appointed for the Lower Provinces. J. J. Foot, the manager of the firm for that part of the Dominion, has selected J. R. Arthur to travel in New Brunswick. Mr. Arthur will reside in St. John, N.B.

* * *

D. H. Howden & Co.'s stock of oils, glass, etc., stored in Tanton's storage building when it was burned, was all covered by insurance. The glass was damaged by the extreme heat, but the oils were untouched, otherwise the blaze and smoke would have been something to remember.

* * *

The "Pandora" range, the most recently designed stove put on the market by the McClary Company of this city, is apparently being well received by the trade over the Dominion. Orders for this range are coming to hand very freely. This is the famous stove that so many thousands were anxious to give a name to at the guessing contest.

* * *

Since your last going to press a rather serious fire took place in the Granite Block on York street. The firms occupying the block were: A. M. Smith & Co., wholesale grocers; McMahen, Granger & Co., wholesale dry goods; John Bowman Hardware Co., and the Hastings Hat Co. The dry goods premises were entirely gutted, only the cellar being filled with bales and cases of goods, that are burned, blackened and water-soaked, and covered over with building materials of the roof and different flats that fell in during the course of the conflagration. The John Bowman Hardware Co., who have in another page told the trade of the occurrence, and the A. M. Smith Co., both escaped serious damage, the heavy fire-walls undoubtedly stopping the extension of the fire. The Hastings Hat Co. had little or no loss.

* * *

The newly-formed Empire Manufacturing Co., of this city, have everything going like a steam engine. Forty-four skilled mechanics of the very best type are hustling to fill the numerous orders that have come rolling in, and every order demanded forthwith—brass goods, and white metal goods, such as are needed by plumbers and for engine supplies—are turned out here by the best workmen in the best style. The demand for all this class of metal goods has greatly increased in recent years. All new towns in our western sections build houses after modern plans with baths, electric lights and steam heating. The apparatus and fittings necessary for these are giving a wonderful impetus to such industries as this firm is engaged in. Messrs. Stevens, J. R. Minhinnick and Trudel are the managing partners of The Empire Manufacturing Company.

W.H.L.

HEATING AND PLUMBING

STUDY THOROUGHNESS IN TENDERING.

As a rule, master plumbers are not numbered among philanthropists: they are not given credit of running their business for the benefit of their customers; on the contrary, they are mostly associated with extortionists. This is greatly owing to the fact that the class of work that a plumber has to perform is not estimated at its true value. If the general public could be brought to realize the great responsibility that rests upon a master plumber, who fully appreciates the trust imposed upon him, there would be more respect shown him, and a plumber would then be placed in his true position.

One who knows the true state of affairs would say that those who are familiar with how things stand would not call the plumbers philanthropists, nor would they call them extortionists, but rather that they were either very unwise or careless.

The public seem to imagine that a plumber's profit is anywhere from 50 to 75 per cent on his work. On that assumption they resort to all sorts of schemes and dodges to entice the poor fellow to disgorge, if not all, a goodly share of what they claim he is making. It is hard to convince such as these that the general rule for figuring is 10 per cent. In fact, in quite a few cases, it does not reach that much. When it is taken into consideration the risks a master plumber has to take, it will at once be conceded that such a policy is suicidal. It would appear that a margin on contracts should be at least 25 per cent. profit.

There was a firm of Toronto plumbers doing the work in 20 houses, taking the full risk, giving of their experience, taking their chances of receiving their pay, for the magnificent sum of $5 profit on each house. Why, one closet bowl broken would have wiped out the margin! The firm are not now in business. Of course not! They lived for others.

The question of figuring on all contracts is a serious one. There are so many reasons why there is such a small profit. One of the main reasons is the over keen desire to increase trade; the aim seeming to be to "do a large volume of trade; never mind the consequence." The fact of the matter is that most of the master plumbers are afraid to put confidence in their fellow craftsmen, preferring to take the statement of their customers, who are interested parties, and who will, unfortunately, often make statements that cannot be borne out by facts. These assertions should not be considered.

It stands to reason that a practical man, who is doing similar work all the time, should be in a position to know within a very small margin just what a job is going to cost; and after such a man has gone carefully over the plans and specifications, taken off all the material required, estimated the labor, ascertained his cost, then added 10 per cent. for his profit, he should not entertain the statement: "Why, I have a much lower price than this; I wish to give you the preference, and I will do so, providing you meet their price." Yet, this practical man, who knows that the job cannot be done at a lower figure, will not even ask to see the tender or who the competitor is, but will console himself by saying, "Well, if the other fellow can do the work at the lower price I can." So he bites at the alluring bait held out to him. If he would only have a little more confidence in his competitor's wisdom, cases like this would not occur. After the work has been started and the material is being charged against the job, then the poor dupe finds that the work is being done at a loss; there is not even interest on the money that has been locked up in the material that has been on hand for some time.

Would it not be wiser to do a business of $20,000 a year with a 10 per cent. profit than try and reach $40,000 on a 5 per cent. basis? Your customers would appreciate the 10 per cent. margin just as well. They are under the delusion that your profit is much larger than that.

Another reason for low prices is the careless manner in which some take off work from the plans and specifications, and do not familiarize themselves with the requirements. This may be all right from your standpoint. You may be willing to take that risk. You may only be in business to pass away the time. Do you not think you should study the interest of your less fortunate craftsman? Are you not doing him an injustice in careless or intentional low figuring? Remember he ought to have your consideration. He is still paying wages, still paying rent, still trying to pay for his goods. If you are in the plumbing business for pleasure, there are many more pleasant occupations than carrying on a plumbing business. In other work you would not have so many worries; no labor troubles to settle; where you would not have to meet your men's demands for shorter hours or more pay. You would not have to consider whether their demands were just or not. You would not have to worry over city by-laws. If you are simply in the business to pass the time away, retire from it at once, and leave the work for some one else who needs to earn his daily bread. Judging you by your acts you are chock-full of benevolence. Pity 'tis that you should waste it in unappreciative quarters. Change about for a while and try a little of it on your less fortunate craftsman. He will be able to judge your acts at their true value. Perhaps you are not looking for your reward here. You had better get a little taste now; the deluge bye and bye may overwhelm you.

Another thing that is responsible for low prices is careless figuring. After care has been excercised in ascertaining the quantities of material required, at the critical moment your careful spirit leaves you. Don't imagine because you bought an article a month ago at a certain figure that you can buy it to-day at the same price. Remember the uncertainty of the labor market. This affects the cost of your goods. Don't think because you did a similar job a year or two ago for say $150, you can do the same to-day. Remember the increase of wages you are paying; remember that your workmen are scarcely turning out as much work as they formerly did.

Of course you would expect that with the increased wage and the shorter work hours that more could be performed in eight hours now than formerly, but it doesn't seem to work that way.

After you have satisfied yourself as to the actual cost at which the articles can be purchased, then be careful in your extensions and additions. How many times after you have submitted your tender has it flashed upon you that the work is being done too cheap, and you again go over your figures, only to find some glaring and stupid error in your extensions or additions. Take a few minutes longer in preparation. Don't get

VARNISH REMOVER

PAINT REMOVER

Anybody and everybody wants something sometime that will take off Varnish or take off Paint. Burning off is dangerous and unhealthy; Rubbing off or Scraping is slow and unsatisfactory.

VARN-OFF

takes it off "while you wait," and a short wait; takes it off clean, without injury to the wood, without injury to the hands or anything it touches, (except the varnish or paint !) no unpleasant odor, easy to work, and a nice profit to the dealer—a sample for the asking.

[illegible] the knack of giving estimates off hand? The rest of us are liable to make mistakes.

How often does it occur that a customer will drop in just to get some little idea as to the probable cost of a contemplated job, and you hurriedly jot down just what comes to your mind will be required, and give an estimated figure. Later your customer comes back for a bona fide price, and you now go into the matter more thoroughly, only to find that what you had thought could be done for $100, comes to $150. Then, rather than tell your customer the true state of affairs, you say, I will tender at $125 and take chances. Is this fair to yourself? Is it fair to the man who is figuring against you? Scarcely. Remember that material you use won't stretch. It is not like dry goods. There is a chance there of making 34 inches go a yard; or, like groceries; sometimes 14 ounces can be made go a pound. Just touch your finger to the scales; it has a weighty effect. Fortunately, our goods won't elongate: it takes 100 full feet of pipe to carry your waste, water or vent pipes that distance. Did you ever notice that it seems to take a few feet over?

Moreover, watch against carelessness in adding. It is said that a firm of master plumbers in the city of Toronto, who were considered to be one of the most careful and prudent firms engaged in the business, made a mistake of no less than $1,000 in their additions, and that not on a very large job. The error was not discovered until the work was well under way and the material was being charged against the work. Of course it was then too late, and the loss had to be borne.

Master plumbers should supply themselves with books with perforated leaves, on which are printed the various articles that go to make up a job. None are so practical or so perfect that they are beyond mistakes. It is not because you do not know what is required, but because you overlook some things. The use of such a book would obviate mistakes of that nature.

If we mistake not, the idea of issuing a book for this purpose was discussed at a former meeting of the national association and a committee appointed to devise the best form it should take. Possibly President Frank Powers will see that the committee are ready to report at the forthcoming convention, and the use of this book of convenience become an established fact.

Remember that charity begins at home. Be just before you are generous. While there should not be any need of guess work or very much question what material will be required with a practical plumber, there is always room for a certain amount of doubt. If you do not take the full benefit of the doubt, have the one who is going to get the most lasting benefit out of the work share it with you. Your responsibility does not end when the job is completed and you have made your last draw. To a certain extent you feel that you are required to keep the fixtures in good condition for a time at least.

Remember you are not only supplying so much material, or furnishing so much labor on your contracts; you are giving of yourself; your years of experience. If you are conscientious, this is a big item. The question with you should be, not how cheaply can this job be done, but how perfect from a workmanship point of view and from a sanitary point of view? Think of the lives depending on the sanitary condition of the work you leave behind.

M.

AUSTRALIA WANTS SANITARY GOODS.

According to an exchange, a correspondent writing from Melbourne, Australia, states that it would be in the interests of manufacturers of sanitary appliances to watch keenly the large demand for these goods that is being created in various parts of Australia. Some English firms are carrying fair stocks out there, and are ready to step in to meet the demand and give quotations on short notice. The City of Brisbane, Queensland, with a population of 150,000, is just considering sanitary matters. The City of Newcastle, N.S.W., is also contemplating some reforms in its sanitary arrangements, to cost about £180,000. It would be a good idea for Canadian manufacturers of sanitary fittings and fixtures to ascertain the probable requirements.

BUILDING PERMITS ISSUED.

TORONTO.

W. Frith, dwelling, 160 Simpson avenue, to cost $1,000.

R. L. Gibson, additional storey to factory, 88 Wellington street west, to cost $1,500.

W. H. Shaw, stable at 185 Crescent road, to cost $2,000; F. H. Herbert, architect.

E. J. McNamara, six two-storey dwellings, Stafford street, south of King, to cost $7,000; H. Simpson, architect.

T. T. Smith, a pair of semi-detached dwellings, 371 and 373 Wilton avenue, to cost $3,200; Thos. M. Smith, architect.

Toronto Carpet Mfg. Co., five-storey brick factory east side of Mowat avenue, to cost $60,000; Wm. Steel & Son, architects.

E. Galley, alterations to drug store and dwelling, south west corner of Spadina avenue and Harbord street, to cost $1,500.

H. F. Squires, two two-storey-and-attic semi-detached dwellings, west side of Albany avenue, near Barton avenue, to cost $7,000; A. J. Harvey, architect.

Church wardens, St. James' Cathedral, two-storey brick rectory, south side of Adelaide street near Church street, to cost $14,000; Darling & Pearson, architects.

OTTAWA.

Mrs. A. Fortier, frame dwelling, Poplar street, $600.

D. MacVicar, frame dwelling, Blackburn avenue, $600.

Maxime Lavigne, frame dwelling, Willow street, $600.

J. A. Grierson, brick veneered dwelling, Somerset street, $800.

Jas. Curry, row of solid brick houses, Third avenue, $12,000.

Corporation of Ottawa, public library, Metcalfe street, $85,000.

Andrew Fogarty, brick veneered dwelling, Lisgar street, $1,500.

John Sutherland, brick addition to residence, Cooper street, $800.

Amos Lawrence, the Sackville plumber, has done his work so well during the years he has been receiving the patronage of the Sackville people, that now he can barely keep up with the large amount of work coming his way. He is off hand and appreciates the trade of his patrons. —Sackville, N.B., Tribune.

BUILDING NOTES.

The Public School Board of Toronto have let tenders amounting to over $35,000 for alterations and repairs to the different schools. This includes plumbing.

A large warehouse is being erected for J. Clark & Son on Germain street, St. John, N.B. When completed it will be among the best warehouses in the province.

Elford and Smith have secured the contract for the erection of the Rostein block on Government street, Victoria, B. C. The building will cost about $13,000. Hooper & Watkins are the architects.

Plans have been prepared by Herbert E. Gates, Halifax, N.S., for the new College of Agriculture at Truro, N.S. The same architect has also prepared plans for bank

Hamilton, Ont.
W. L. HALDIMAND & SON, Montreal, - Eastern Agents.

[illegible] at Farrstore, for the Union Bank of Halifax.

It is said [illegible] will erect a new hotel at Brandon, Man., at a cost of $60,000.

The contract for the erection of the new market building at Charlottetown, P.E.I., has been let to The Maritime Contracting and Mining Co., at $36,47[illegible].

The main machinery building being erected in New Glasgow, N.S., by McQuarrie & Grant for The Standard Drain Pipe Co., Limited, is well advanced. The building is 105x101 feet. There are six modern cottages being built near the town for workmen. These will be followed by more in the near future.

There are quite a lot of buildings being erected in Morrisey Mines, B.C. The Crow's Nest Pass Co., Limited, are having erected twenty-five large dwelling houses for their employes. The foundation is being put in for Hanson's Hotel, which is to cost $20,000. Stephens' Hotel is in course of construction and Farrell's Hotel is well under way. There are quite a few stores being erected. The Great Northern Railway Co. are having built a passenger depot and freight sheds.

PLUMBING AND HEATING NOTES.

H. A. KNOX, of Knox Bros., Ottawa, was in Toronto this week. He reports that trade is very good in Ottawa, and that there is every prospect of a busy fall. Mr. Knox was staying with his uncle, Mr. Williams, permanent secretary of the A.O.F. He took in a trip to the Falls. The Ottawa association expect to send five delegates to the National Convention in Montreal, including Past President John McKinley and Ex-Secretary H. A. Knox.

A. B. Dowswell, Claremont., Ont., has the contract for plumbing in the Pickering, Ont., College.

Manufacturers of boilers were in Toronto last week attending a meeting of the association. It is understood that it was decided not to make any change in prices just at present.

The Toronto association will hold their next meeting on Monday night, June 22. There will be some very important matters discussed. The Grievance and other committees will bring in reports. Delegates to attend the National Convention will be selected.

P. E. Rouiller, manager of The Star Iron Co., Limited, Montreal, was in Hamilton during the week looking in on the trade. He also was in attendance at the C.O.F. Convention. It was Mr. Rouiller's first visit to Hamilton. He was quite pleased with the city.

The effects of the strike amongst the various trades unions in Toronto is being felt considerably by the master plumbers. While many buildings contemplated will not be erected this fall, it is still felt that sufficient will be carried out to make the work somewhat of a rush a little later.

A joint meeting of the Grievance Committees representing the masters' association and the journeymen's union, of Toronto, was held on Wednesday evening to adjust a difference between them as to the reading of a clause in the agreement. It is expected that a satisfactory conclusion will be arrived at.

Owing to the wet grounds the baseball team of the Toronto association did not meet for practice last Saturday. If fine, they will assemble next Saturday at the same time and place. The captain went fishing and claims to have caught five. If he could have bought more he would have given one each to his team.

The Bennett & Wright Co., Limited, are keeping busy. They are doing the plumbing and heating in the Alexander apartment building, on University avenue. It is said that the contract for this is over $50,000. The firm have also other contracts under way. They are making considerable alterations to their premises on Queen street.

W. J. Burroughes, one of Toronto's former master plumbers, is visiting friends in Toronto. Mr. Burroughes has been in England for some time. The craftsmen will be glad to extend a welcome hand. None were more active than Mr. Burroughes in the organization of the National Association, he being a past vice-president of that association. Through his efforts quite a few of Toronto plumbers became interested in the local association.

W. H. Meredith was in Hamilton one day last week and called on some of the trade up there. The general report was that trade was in good condition. All spoken to fell in with the idea of a joint picnic with the Toronto association. When mention was made of a challenge from the Toronto association baseball nine to play a match, a sympathetic smile came over their features. They say that at one time they could play ball. We give them the benefit of any doubt. Mr. Walsh is arranging to attend the National Convention in July.

GOOD TIMES FOR U. S. PLUMBERS.

W. M. Merrick, General President of the United Association of Plumbers, Gas and Steam Fitters, says: "Never in the history of the plumbing trade have the plumbers of this country enjoyed better and more prosperity than they are enjoying at the present time. The organization is growing rapidly, the members are in receipt of good wages, work is plentiful, and everything points to continuance of present prosperity for at least another year. The United Association of Journeymen Plumbers, Gas Fitters, Steam Fitters and Steam Fitters' Helpers has taken part in bringing about this prosperity and will endeavor to maintain present conditions. Of course we have our troubles in spots, there are strikes on in a few places, but they are immaterial and we expect they will all be settled shortly. Our association has now about 20,000 members, scattered all over this country wherever the American flag floats. We are adding new locals right along. In the three months ending March 31 over 100 new local unions were added to our association, and I have not the slightest doubt but that this year will be a record breaker in point of growth for our organization. We are proceeding along conservative lines and find that this policy is the one which succeeds.

"The average wages of the plumbers of the United States is about $3.50 per day. In some cities the men get as high as $5 and $6 per day, while in most of the larger towns and cities the wages are $1 per day. The general average, however, is brought down considerably by the low wages which prevail in the smaller towns, where as low as $2.50 and $3 per day is the prevailing figure. This low wage, however, is to a large extent compensated for by the difference in the cost of living. In a great many small places the cost of living is not more than one-third to one-half to what it is in Pittsburg and cities of its class. Consequently wages in those cities are not as high, neither in the plumbing trade or other lines. Take, for instance, the cotton manufacturing districts of New England. Lowell, Mass., is one of the cheapest towns in the United States. The class of people there, cotton mill operatives, are paid such low wages in the mills that they cannot afford to pay high rents. They being in the majority, prices for everything are low and wages in other lines are small as well. For instance, board can be secured in Lowell for $2.50 per week. Plumbers get $3 per day there; and are therefore high-priced men in that city."—Plumbers' Trade Journal.

THE CARE OF LAMPS.

The following hints regarding the care of lamps, given by The Crockery and Glass Journal, would be appreciated by the average householder. Cut them out and give them to your local newspaper:

"In lighting a lamp the wick should be turned down and left down until the chimney and shade are replaced; then gradually turned up. This will save the chimney.

"A few bubbles of air in the oil tank of a student lamp will often prevent a free flow of oil through the narrow pipe which carries the oil from the tank to the burner, causing the lamp to give a dim, yellow light. When filling the student lamp bear this in mind and fill the tank to the top, and if any air bubbles appear, break them."

STOVES AND TINWARE

OPENING OF McCLARY MFG. CO.'S NEW WORKS.

THE opening of the large new works of The McClary Mfg. Co., London, Ont., a description of which has already been given in "Hardware and Metal," was celebrated in royal fashion.

This company is enjoying the most cordial relations with their employes and so marked the opening of the works by a mammoth picnic at Chelsea Green, the site of their new plant. To this picnic the employes, their wives, families and lady friends were invited. All arrangements were carried out with great care and judgment and the day will linger long in the memory of all present.

The new works are on new ground, where there is abundant room for further expansion. Already a large territory is covered by the new works, but in choosing the location the management had in mind the enormous growth of the past, that has swallowed up the great part of a large block in the very heart of London—a process that when the first buildings were erected, now many years ago, was doubtless never dreamed of as a possibility of the future. And what the McClary company's plant in the not distant future may be, who can foretell?

An immense crowd participated in the affair, and fun and laughter was a feature of the day.

Prior to the holding of the sports in the afternoon, there was a demonstration in the city, at which the antics of the clown band produced much merriment.

The sport passed off very successfully. The customary races were dispensed with, and instead there were tub races in the river, the chasing and capture of a greasy pig, and the disporting of a "rube" band, whose instruments were strong reminders of the workshops, consisting as they did of teapots, pieces of conductor pipe, and so on. Then there was the comic song contest, and the waterpail and wheelbarrow events each of them amusing and out of the ordinary. A ball-throwing contest for the ladies demonstrated an accuracy and strength of arm that was creditable.

More than two thousand people sat down to the supper, which was spread in the mounting shop of the new plant. The shop was gaily decorated for the occasion. All were more than pleased with the fare provided. It is estimated that 3,200 sandwiches were provided; that half a ton of cake was consumed, and 400 boxes of strawberries, requiring 50 gallons of cream, were done away with.

The amusements of the day were brought to a suitable close by an enjoyable dance in the evening. The immense space of the second floor was turned into a dancing hall.

Back of successful events some moving spirit is generally found. In this case it was Col. Gartshore, vice-president and manager of the company, who was, however, ably and enthusiastically aided by the various committees, the chairmen of which were J. K. H. Pope, J. H. Herrick, Joseph Nicholson and R. S. Wilson.

ENGLISH RANGES IN CANADA.

A DESCRIPTION of the new works of B. & S. H. Thompson, Limited, Bermingham, Eng., appears in Ironmonger. A paragraph of particular interest to the Canadian trade is extracted: "The business of this firm, it is interesting to record, was established nearly 100 years ago by a member of the well-known Chance family, and was carried on under the style of Wm. Chance & Son for rather more than half a century. A little over 10 years ago, Stephen Thompson, who had served his apprenticeship in the horse, acquired the business, and carried it on in partnership with his brother, Benjamin Thompson. The new firm succeeded in building up a large connection with our Australasian colonies, with Canada, and, more recently, with South Africa, while, in addition, they did a good general trade with the West Indies, and also with various markets in the Far East. Upon the death of Benjamin Thompson, which occurred some 20 years ago, the business devolved upon S. H. Thompson, with whom G. F. Patterson was associated as partner for ten years, and under whose supervision it so expanded that a couple of years ago it was deemed advisable to secure its incorporation under the Limited Liability Act. The Canadian business of the concern is now transacted by their former branch house, which was established some years ago in Montreal, and which is now converted into a private limited-liability company, under the style of B. & S. H. Thompson & Co., Limited, with G. A. Kohl, late managing partner, as managing director.

CATALOGUES FOR STOVE DEALERS

It is not too early for the hardware man to lay his plans for next winter's stove, range and heating trade. In order to be thoroughly posted he should read all he can on the subject and study the matter in every way, not placing his order until he is convinced that he has secured the best line for his particular class of trade.

"JEWEL" STOVES, RANGES, ETC.

THE Burrow, Stewart & Milne Co., Limited, Hamilton, have not yet issued their catalogue for the coming winter, but have ready for the trade a comprehensive book containing illustrated descriptions of "Jewel" stoves, ranges, hollow ware, etc. This firm manufacture steel ranges and range cooks, cast coal and wood ranges, cast wood ranges, steel coal and wood cook stoves, cast coal and wood cook stoves, cast wood cook stoves, coal heaters, wood heaters, laundry stoves, pots, spiders, bowls, dampers, sad irons, etc. Their stoves are sold with a guarantee good for 12 months from date of purchase from dealer. In addition to the large catalogue for the trade, this firm have also booklets ready for the retailer to distribute among his customers. A useful one for the summer months is now ready, entitled, "What the Cook should Know," which gives information about "Jewel" gas ranges; also many recipes for dishes appreciated at this time of year.

DOHERTY STOVES.

The Doherty Mfg. Co., Limited, Sarnia, Ont., have ready for distribution a catalogue describing their decarbon steel stoves and ranges, the good qualities of which are that they will not warp or crack with fire. Their weight, workmanship and construction give them many points of superiority. Their catalogue is well illustrated and contains full information. A copy will be sent to any reader of "Hardware and Metal" requesting one.

GURNEY-TILDEN HEATING GOODS.

Not many catalogues issued in Canada are superior in either appearance or general utility to catalogue No. 58, issued by The Gurney Tilden Co., Limited, Hamilton. This firm manufacture all lines of stoves and ranges, which are described in thorough detail in this catalogue.

[illegible] its publication, however, several [illegible] have been added, so a supplementary catalogue has been prepared. This can be had at any time. This firm [illegible] an excellent reputation for their [illegible] furnaces and registers. While [illegible] literature regarding these has been issued lately, any of the trade desiring to secure information concerning them will find their catalogue "D" to contain all information essential to a thorough understanding of the good points of this line. This firm also issue dainty booklets for the use of the trade in [illegible] their customers. One is at present ready for distribution, which shows to advantage the good points of their gas stoves and ranges.

DIRECTIONS FOR SETTING UP STOVES.

The following hints for setting up stoves are given by The Doherty Mfg. Co., Sarnia, Ont.: The first essential in setting up a range or cook stove is to examine the chimney and see that it has sufficient flue space and is of proper height. It is the chimney alone that furnishes the draft and not the stove (as many suppose) and it must, therefore, be of good size and clear of all obstructions in order to furnish draft enough to operate the stove properly. The flue should be round or square, at least eight inches in the clear and as high as the main part of the house or any wall near it. If not high enough, it should be extended with brick, if possible, but if a sheet iron cap is found necessary, have the pipe at least eight inches in diameter, and see that it fits the chimney tight. If any air is admitted around the top of the chimney, it will decrease the draft rather than help it. It should be straight, not angular; should not have any bends or turns; should be even or flat at top; and all chinks should be well filled with mortar. It should never have two openings into it. The flue that is used for the stove should not be used for ventilating the cellar, and all openings into it, above or below the stove, should be tightly closed. A new or green chimney will never have a perfect draft. It will not draw perfectly until it is perfectly dry, which sometimes requires two to four weeks' time.

Use as little pipe and as few elbows as possible. See that it fits tightly together and into the chimney and on to the collar of the stove properly. See that it is not shoved into elbows or chimney too far. Always have pipe and opening into chimney full size of collar on stove. Do not set two stoves in same flue, or use a "T" joint if you can possibly avoid it. See that all the flues are open and clear. See that the damper and flue stops are in place and closed tightly. Be sure you know how the dampers operate: that they may not be open when you think they are closed: and bear in mind that almost all stoves having reservoir have two dampers, both of which must be properly turned to bake.

SANITARY DINNER PAIL.

E. T. Wright & Co., Hamilton, Ont., are introducing on the Canadian market Ehle's patent food carriers, which are built in compartments, enabling the owner to take his dinner to shop or factory, keeping each class of food away from the other, so that the taste of one will not be affected in any way by the rest. It can also be nested, so that it can be taken home in quite small compass. Further particulars may be had on enquiry.

NOTES OF THE TRADE.

A. B. Ormsby & Co., contracting roofers and metal workers, Queen and George street, Toronto, have fitted up new premises which are a credit to themselves and are now branching out as manufacturers. They are now making a new design in metallic skylights, which is guaranteed to be absolutely wind and dust proof. This skylight, which will be offered for sale to the trade, will be described in a later issue.

The marriage of Miss Lou S. Fawcett, daughter of Mrs. Hibbert Fawcett, to T. A. Treen, traveller for The Enterprise Foundry Co., is announced to take place in the Main street Baptist church at 7 o'clock next Tuesday evening.—Sackville, N.B., Tribune, June 11.

The Toronto iron moulders' strike has not yet been settled, though some of the foundries have given in and taken the men back at a nine-hour day and higher wages. The largest firms in the city are not affected by the strike.

A report has gone the rounds of the daily press to the effect that The Canada Radiator Co., Ltd., Port Hope, Ont., has accepted a site at Outremont, Que., and would move their works to that place. In reply to an enquiry, J. J. Travers, managing director of the company, authorizes "Hardware and Metal" to deny the report, as no decision has yet been reached in regard to the matter.

La Founderie de Plessisville, Que., are busy preparing their patterns for the coming season.

The Grundy Stove Company, Limited, Guelph, Ont., have been incorporated with $40,000 capital to manufacture and sell stoves, ranges, furnaces and water boilers, and all description of grey ironware and malleable iron and brass castings. The directors are: R. N. Grundy, Irvine Tovell, Joseph Carter, G. G. Moore, Nelson Moore, and Frank Frank, all of Guelph.

W. J. Copp, Son & Company, Fort William, Ont., have secured George Anderson, foreman with The McClary Mfg. Co., London, Ont., as foreman in their moulding shop. Mr. Anderson has wide experience and bears an excellent reputation for the quality of his work.

The Guelph Foundry Co. have made a shipment of "New Idea" stoves to Jamaica. Mr. Jas. Francis, the well known jelly manufacturer and coffee grower, Cedar Hurst, made the purchase for his own use. The "New Idea," now famous in Canada, will soon become famous throughout the West Indies.—Guelph Herald.

THE DANGER OF SUCCESS

A man profound and seeming wise,
Who made a name
And bus'ness fame
With printer's ink
That made folks think,
Went heretic. "Why advertise,
And, day by day,
Just throw away
The hard-earned rocks?
My name now talks;
My growing trade and store's vast size,
Will draw the crowd,
And talk more loud,
Than columns wasted every day
On 'Ads.' I'm sure no longer pay."
He cut the printers down one-half;
The saving made the old man laugh;
But day by day
Trade fell away.
Success had made the old man mad.
His bus'ness soon got "awful bad;"
But still he wouldn't advertise,
And "store for sale" caused no surprise.

—J. Yort.

PERSONAL MENTION.

Mr. Wilburt Westran, formerly with Fennell & Co., Berlin, Ont., and Mr. George Horsman, lately with Stanley Mills, Hamilton, have accepted positions with The Smith & Ferguson Co., Regina, N.W.T.

Mr. John Sanson, who has been engaged with White Bros., Collingwood, Ont., for the past six years, has resigned to accept a position with The Fairbanks Co., Montreal, whom he will represent in Northern Ontario.

Mr. E. B. Ryan, formerly representing H. S. Howland, Sons & Co., Limited, is now on the travelling staff of The Kennedy Hardware Co., Limited, Toronto.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITISISM

Edited by **W. Arthur Lydiatt,** TORONTO.

NOTE. Herein are discussed the principles and practice of advertising. Subscribers are invited to send Mr. Lydiatt specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

Are People Talking About Your Store? They Should Be.

I have been away for a couple of weeks and find on my return a number of letters from subscribers enclosing ads for criticism. It is certainly encouraging to know that HARDWARE readers are taking such an interest in this department, and that so many of them are anxious to improve their advertising.

I wish some readers would write and tell me a little of their experience in advertising—what plans or methods they have found to be most successful and what, if any, they have found to be a failure. Most of us are continually doing something or other to extend trade and gain new customers. I would like to know what the more enterprising HARDWARE readers have done or are doing in this connection.

Ads which have been sent in for criticism will receive attention each in turn, and I hope those readers who have not already sent in specimens of their advertisements will do so, that we may make this department of as much real practical value as possible.—THE EDITOR.

ON MAKING EXTRAVAGANT CLAIMS

TO write of your own store, or of your own wares, as if you were really "the only pebble on the beach," is to promote unbelief. To make extravagant claims—to say things that you really wouldn't expect people to believe, if you or they gave it a second thought—has anything but the desired effect.

An advertisement, if it is to sell goods, must be convincing, and to be convincing it must wear an air of candor and truth. The public is a shrewd critic and will not believe or be persuaded that perfection of purchase is to be found in only one place.

Makes little difference how much you tell them, or how loud you proclaim it, people won't believe that yours is the only store on earth, or that you have the best of this or the cheapest of that. If you undertake to claim it, the elements of truth that form a part of your advertisement will themselves be discredited. The immediate inference will only be accentuated that yours is not a probable story, as there is nothing in existence of which it can not, or will be said: "There are others."

Do not, therefore, claim everything. The manner in which "best," "wonderful," extraordinary," and such superlatives, have been overdone in the wildcat style of advertising, has altogether destroyed their value. It has, instead, given a force to an understatement of facts—to the quiet reasoning of "value for money"—which makes the rather ordinary practice of racking the brain for "big" words unnecessary work.

The most discreet and shrewd advertisers, therefore, use mild and temperate phrases. They admit that their rivals serve the public well; but they gently insinuate their desire to see and serve you in such a captivating way that the public are much more easily influenced.

Too much pretension in an advertisement always revolts the audience addressed, and they make the necessary discount. To claim less than might be claimed, invites the reader, and leaves an impression that results in the advertiser's profit.

By making your arguments sound reasonable—by making them believable—you create an impression in the minds of the public that more than doubles the force of your daily announcements.

We cannot, in fact, overestimate the force and value of a few modest words well phrased. When a would-be customer comes to the store time after time and finds that the articles advertised are really just as good, or even better, than what was claimed in the advertisement, he or she is liable to become a little enthusiastic over it.

We read in an advertisement of some special bargain—perhaps a half-price one,—or one of those very frequent "below cost" offerings,—and we wonder if the articles advertised are really as they are claimed to be. This is almost invariably the case, because we are so used to overstatement of facts. It is, then, something in the nature of a pleasant surprise if we find the articles just as good—or better—than represented.

After all, the basis of successful advertising is confidence. People get to know just what value to place on the statements of their local merchant, and always weigh the value of his advertised offerings accordingly.

Get to the point where people will readily believe that what you say is really so, or, that your offerings are even better than you claim, and your advertising will have a double value.

Ymir, B.C., 18th May, 1903.

Mr. W. Arthur Lydiatt,
HARDWARE AND METAL,
Toronto, Ont.

Dear Sir,—As invited, we beg to enclose circular which we are mailing to our customers. Advertising in the local paper, even when regularly changed, does not bring satisfactory results, and we find this method better instead to follow it up. We should be glad to have your criticism.

Yours truly,
SPENCER, SANDERSON & Co.

With this letter came a printed circular, gotten up in the form of a two-page letter, with blanks for the name, etc., of the party addressed, and for the signature of the firm, which, I presume, were filled in on those circulars sent to customers.

From the circular itself I cannot arrive at a definite conclusion as to just what the object was in sending it out. It is intended to sell goods, of course, but usually when we send out a circular or other announcement of this kind, it is to announce the arrival of new stock, or to tell of some special inducements which are being made to draw trade.

This circular is a combination of what might have been a half dozen or so newspaper ads. It starts off with: "We have this spring a large and well-assorted stock of seasonable hardware. Buying in the eastern markets, we are enabled to sell the goods at prices which will compare favorably with quotations from any other Kootenay point." Then follows some talk about the arrival of a consignment of paints and varnishes, with a few prices quoted, and mention of fly screens, ice cream freezers, oil stoves, hammocks and garden tools, in the order here given, prices being quoted in each case, and closing with, "We trust to receive your patronage, and all orders will receive our prompt and careful attention. We shall be pleased to reply to all inquiries and quote prices on all goods in our line."

There is nothing unusual about the circular, unless it be the assortment of goods mentioned, in which there is certainly variety.

I would have gotten this up in the form of a little four-page paper, devoting a paragraph or two to each line of goods carried in stock, or, at least, the more important of them. I think if you had had the idea in mind in arranging the matter, that you would have been much better satisfied with its appearance, and with the results obtained. Try it next time.

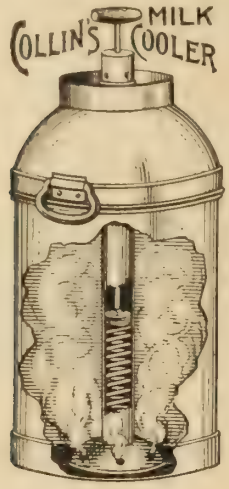
AN EFFECTIVE MILK COOLER.

The great foe of sweet milk is animal heat. The quicker the fresh milk can be cooled the better. But cooling the milk through and through is not effected without a good deal of trouble. A new device on the market is the Collins milk cooler. This consists of a species of air pump, such as we are familiar with for inflating bicycle tires. The pump is placed inside the can and the air forced into the milk from the bottom, sideways.



The fresh, cool air filters upward, completely aerating the entire contents, at once arresting germ action and assuring sweet milk for a longer period than is ordinarily possible. This milk cooler is also made attached to the outside of a capital milk pail, the air being forced through a valve in the centre of the bottom of the can. This useful article is made by The Collins Mnfg. Co., Toronto, makers of a great variety of useful devices sold by hardware dealers.

A $25,000,000 STRIKE.

The strikes in the building trades and the shutdown in the building material and lumber yards in New York, which have thrown more skilled mechanics idle than any general strike ever did in that city, are now being looked upon by the labor unions themselves as one of the most costly experiences they have ever had. The skilled men who are idle, estimated at from 100,000 to 110,000, have nothing to gain for the loss of wages when the shutdown in the lumber and building material yards is over to compensate for the wages lost, as they had made no demands and were thrown idle because of the continued determination of the Board of Building Trades to support the demand of the Building Material Drivers' Union for recognition of the organization. Including the losses in profits by employers through the stopping of work, the loss of wages, the losses of small storekeepers and others dependent for custom on the workers, the losses have been figured at $25,000,000 up to date.

The shutdown in the lumber and building material dealers' yards began about May 5 and has lasted 32 days. The following are, according to The New York Journal of Commerce, the estimated wages lost by the different trades thrown idle by the shutdown: Carpenters, 10,000 men, at $4.50 a day, for 32 days, $1,440,000; bricklayers, 7,500 men, at $5.25, $1,324,000; plasterers, 1,000, at $5 a day, $640,000; plasterers' helpers, 4,000, at $3.50 a day, $448,000; iron workers, 8,000, at $4.50 a day, $1,152,000; laborers, 25,000, at $2, $1,600,000; electrical workers, 2,000, at $4, $286,000; stonecutters, 1,000, at $5, $1,600,000; plumbers, 2,500, at $4.25, $339,900; boilermakers, machinists, marble workers, tile layers, cement masons, marble polishers, wood lathers, stair builders, glaziers and others, $3,800,000; unskilled trades other than plasterers' laborers, 50,000, $2,000,000.

About two thousand building contractors are involved in the shutdown, and their loss of profits, office rent and other expenses foot up between $7,000,000 and $8,000,000. Merchants have lost a season's trade by not having buildings finished on time, and others more remotely affected, if they have not incurred losses already, will suffer.

THE "SOO" WORKS AND PROTECTION.

When interviewed regarding the recent discussion in the Dominion Parliament regarding protection for iron and steel, F. H. Clergue, of The Lake Superior Consolidated Co., stated: "Personally I have not given up hope that the Government will themselves take action on the question, and that they will do so during the present session. We at the Soo have not so much at stake as they have at Sydney, because we have a duty on steel rails that helps us. We are, of course, greatly interested, because injury to one branch of the industry is bound to affect the whole industry in Canada, especially in the financial aspect of the case. I hope that the Sydney people will get what they are asking for."

"SOO" COMPANIES TO CONSOLIDATE.

Cornelius Shields, president of the Consolidated Lake Superior Company, has announced that the new Board of Directors of the company have decided to apply for a special charter to enable them to incorporate all the subsidiary companies on which there is not any bonded debt under two principal companies. The two principal companies will be the Lake Superior Power Company, and in it will be included all companies that have been granted charters by the Dominion Government, and the Consolidated Lake Superior Company, in which will be included all the companies that have secured charters from the Government of different States.

It is expected that this will greatly simplify the management of the entire works as one whole.

THREE FISHERMEN.

Messrs. J. Harkness, of The Sherwin-Williams Co., Max Morrel and Chas. Smallpiece, of Lewis Bros. & Co., Montreal, who are members of the Good Times Fishing Club, are about to spend a few days on the Severn River. Their success is assured as Mr. Smallpiece is president of the foregoing club.

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, JUNE 27, 1903. NO. 26.

Subjects Being Discussed at Ottawa

Written for Hardware and Metal by a Member of Parliament.

House of Commons, Ottawa, June 22.

"UNEASY lies the head that wears a crown," and to a certain extent at least each Cabinet Minister is supplied with that glittering emblem of authority—is crowned with power. To the man at a distance the position of a Minister is an enviable one. The salary, to the average person, seems ample, the occupation at once interesting and dignified, but to a close observer the greenness of the pasture disappears and big brown sun burned patches force themselves upon the unwilling eye. He notes that the wage of one handling an immense department such as that of Railways or of Public Works is little more than that drawn by the manager of any one of fifty financial institutions in the cities of Montreal and Toronto, and that the Premier himself, to whom the shaping of the destinies of this great country is entrusted, has for renumeration rather less than the head cook in New York's Waldorf-Astoria. As for work, he sees men rapidly aging under the constant, never-ending toil of a Department, and in addition to all he remembers the numerous financial calls upon these men, and that to their position there is no certainty. An adverse vote may leave them with their original businesses entirely dissipated, their present pay vanished into thin air. Add to all this the constant attacks of opponents, often most slanderous in character, and the reflecting one hugs his simpler, freer life to his bosom.

"Cultivate a clear conscience and a thick hide," is the advice of an old politician. Many have the former without the latter, some few, we fear, have the latter without the former, and fewer still are blessed with both.

* * *

When we hear criticism of the large amount it takes to run the business of Canada, we often wonder whether the critics have any idea of the immense amount of work that is done at a price that is no better than a sweating wage. In the country districts we have hundreds of post offices run for the magnificent sum of from twelve to fifteen dollars a year. Fancy keeping a room for the use of the public for the enriching sum of four cents a day. One member tells of a constituent who wrote saying that he refused to keep his post office longer at twelve dollars a year, but would retain it at fifteen—his bold request for a twenty-five per cent. increase was promptly turned down. We know men, who carry mails in country parts for little more than the price of the hay and oats consumed by the horse used on the postal route. Verily, there is a glamor somewhere in working for the Government.

* * *

The people of the Dominion will always stand for fair play and fair dealing. Give them the facts and the national jury will pretty generally return a just verdict. To the task of furnishing information in connection with The Chignecto Marine Transport Co. that, as he expressed it, the national honor might be cleared, Mr. Logan, of Cumberland, has been addressing himself. The story is too long to be told at length, but to summarize it we may say that English investors were encouraged by the Government of Canada to invest four million of dollars in a ship railway which was to answer the purpose of a canal across the isthmus connecting Nova Scotia and New Brunswick. The work was never completed, and for years the induce the Government to make them induce the government to make them some compensation. In replying to Mr. Logan, Mr. Fielding denied any legal or moral obligation, but admitted that there were surrounding circumstances which made it desirable to give the application very careful consideration, and there is a pretty general opinion here that half a million will be voted, that being about the amount expended by the company in freight and custom duties in landing their plant and material in Canada.

* * *

Then take the case of the Militia. In the permanent force hundreds of men are working the year round for a daily wage equal to what a plumber gets for a single hour, while in the non-permanent militia thousands put in twelve days annually at fifty cents a day, sacrificing a dollar and a half per diem to do so. These men, both permanent and non-permanent, are constantly employed for the protection of people during strikes, and all that time they draw the same low wage, instead of getting constables' pay for what is really constables' work. We firmly believe that if the money saved by under-pay throughout the various Government services were set off against the money lost by over-pay, a round half-million would remain in the Government chest.

* * *

Speaking of under-pay in connection with the militia, the camps of instruction at present being held are demonstrating the fact that there is, after all, a low limit below which men will not work, even for the Government. In spite of

the very large increase in the wages of labouring men, the pay of our citizen soldiers has not been raised, and as a result our country regiments are fast dwindling to pieces. Only two or three years ago the force received an immense impetus from the South African War, and only one year ago our Canadian Ministers in London at the coronation, in dealing with the subject of Imperial defence presented the British Ministers with a written and carefully prepared memorandum in which a promise was given to treat the Canadian militia upon a proper basis. And yet the men who should make the militia, who do make it when they come out, are offered a pittance, while little more than half the establishments are called out to camp at that. The result is that the various corps now receiving instruction are lamentably weak in numbers, for it has been impossible to bring out even the small quota called for, while the personnel of the men is very inferior, a fifty-cent wage having brought out, as might have been expected, a large proportion of fifty-cent men. And yet to give the whole force, not a fractional part thereof, seventy-five cents a day would increase the cost of annual training at the outside only one hundred and twenty thousand dollars. With a surplus of thirteen millions, will any of our business readers object to this slight increase? With this small additional expenditure a useful and necessary part of the machinery of a State could, we believe, be made at least reasonably efficient. That a militia is necessary in Canada few will be found to dispute: then why not spend a little more and get value for our money? Our Canadian soldiers have defended our frontiers in the never to be forgotten war of 1812-1814; they suppressed the Papineau-Mackenzie Rebellion of 1837, the success of which, whatever may have been the justification for the uprising, would have to a certainty ended in the merger of Canada in the United States. They saved our land from the incursion of marauding ruffians in 1866 and 1870, they preserved to us our magnificent west in 1885, and they bore a manful part in maintaining the integrity of the Empire in 1900. On each occasion death and wounds were cheerfully incurred for the country that they loved. Shall a force like this be starved to death in the years of plenty? Nor must we thank them only for what they have done we owe them gratitude for what their presence prevented the very inception of. It is not the burglaries actually interrupted by policemen which justify the keeping up of an expensive police force; their deterrent effect is their raison d'etre. A country unarmed always invites attack; Canada must not be undefended. We ask you business men whether, in your opinion, the national fire insurance can safely be allowed to lapse, and confident of your answer we ask your active intervention with your respective representatives in Parliament to the end that justice be done the militia force of Canada.

* * *

The sixteenth was in a large measure an agrarian field-day, the questions of drainage across railways, and protection for market gardeners, occupying most of the time of the House, and developing short, sharp, pithy and interesting debates. The former came up in connection with Mr. Blair's Railway Commission Bill and was precipitated by Mr. Cowan, the member for South Essex. Mr. Cowan not only comes from a county in which this matter is a burning question, hundreds of thousands of dollars being invested there in a drainage system, but he is one of the ablest and best posted drainage lawyers in the province. This question of drainage may very well be coupled with cattle-guards, as the farmer's pet grievance, and with equal justification. Thousands of acres of the very richest land are made useless, or nearly so, by water backed up upon them by railways. True, the Statute Book, as at present constituted, provides a remedy where the corporation refuses to meet the wishes of some particular farmer, but it is through an appeal to the Railway Commission of the Privy Council, sitting at Ottawa, and as a consequence, in ninety-nine cases out of a hundred, the farmer submits to injustice rather than face what he considers rightly or wrongly to be the financial danger of an appeal. Mr. Cowan proposes, (we cannot go at length into his enactment, which is necessarily more or less technical,) to localize procedure, so that a man may have his case tried at his own door inexpensively. He was very warmly supported by members from both sides of the House, so warmly in fact that the Minister, who at first showed fight and vigorously defended the existing system, agreed to let the matter stand over in order that clauses might be drafted to meet what had manifested itself as a very general opinion. Then came the turn of the market-gardeners. The stock arguments of the protectionists and free-traders were again trotted forth to form the skeletons of the rival arguments. Those opposing the motion alleged that the vegetables imported did not interfere with Canadian products, as they were the early varieties and so when later on Canadian products matured they naturally took the market, having all the advantage in freight, and in addition a 25 per cent. protection already existing in almost every case. As Mr. Leonard moved his resolution as an amendment to a government motion to go into supply it at once became equivalent to a vote of want of confidence, and as such, some members voted against it who were nevertheless in favor of the principle. It was finally negatived by 100 to 51.

MAY REVOLUTIONIZE REFINING OF COPPER

A despatch from Ithaca N.Y., to the New York Times says that Isaac Baum of Uniontown, Penn., and Florence Joseph Schwab of New Orleans, students in the engineering department at Cornell University, have just made discoveries which may revolutionize the copper refining industry. They explain their discovery in a thesis on which they collaborated.

Baum and Schwab have received a mark of 98 per cent on their treatise, the highest in the history of Cornell. For some time past these young men have been experimenting day and night to discover the most economic conditions under which to refine copper. In their thesis, which they have submitted to Sibley College, Cornell University, they describe a process for refining copper which professors here say will stand any test, and may save copper refineries millions of dollars annually.

In their exhaustive treatise the students demonstrate that the temperature at which copper is now refined and the current which is passed through the refining vats are not high enough. By using the temperature and the current density which these young inventors have calculated, the original cost of a refinery will be reduced more than one half for the same output.

When seen to-day Baum and Schwab were very reticent over their discovery, acting on the advice of the professors here. "All that I will say at present," declared Baum, "is that I believe all the refineries in this country will soon use our method."

Professor Wilder D. Bancroft, under whose supervision Baum and Schwab have been working, will translate the thesis into German, and it will be read before the Electro-Chemical Society of Berlin. At this meeting the details of the discovery will be explained in full.

The ONTARIO TACK CO.
Limited
HAMILTON, ONT.

FOREST CITY GOSSIP.

Office of "Hardware and Metal."
London, Ont., June 25, 1903.

There is but little to note in the hardware business of this city during last week. A call on the wholesale and retail firms emphasizes the fact stated in our last week's letter, that it is a record breaking year for the hardware men of London.

* * *

Hardwaremen in the retail stores are complaining somewhat about the sales of rubber hose. The rains of June have so moistened the lawns that no one thinks of using their hydrants, hence the light demand for hose. On the other hand, as an offset to this, the sales of lawn mowers have increased fifty per cent.; the Mayor's prize for the best kept lawns in London gives impetus to the sales of lawn mowers, clippers and other garden implements, which are well stocked in every store.

* * *

Builders are smiling here at present at the prospect of getting cheaper bricks. A war between the new brick manufacturing company and the old style men is in the near future quite probable. It appears that the new company have cut the price to $6.50 per thousand, while the other makers are selling at $8.00; the latter say they are not going to submit to this thing; that they are well organized, and two can play at that game, and before long you can look out for bricks dirt cheap.

* * *

J. Darch & Sons., wholesale saddlery hardware, are now occupying the new premises built on Market square. They have two travellers on the road sending in satisfactory orders. They are sole manufacturers of the Blair Separable Horse Collar, which is patented in Canada, and the demand for this collar keeps this department busy. Horse fly nets, and buggy dusters are, they say, also in good demand.

* * *

W. Wyatt & Son, also on the Market square, are well known in and around the city, having been established here many years. The senior member of the firm is one of London's ablest and most popular aldermen. Tinsmithing, steamfitting, jobbing and kindred work, with a large farmers' trade from the surrounding country, are the special features of their business.

* * *

James Cowan & Co., wholesale carriage and builders' hardware, are enlarging their premises by taking in the cellar under, and the flats over the New York grocery store on Dundas street. They manufacture carriages and sleighs, and ship them to their numerous blacksmith customers in the unpainted state. Mr. R. G. Edgecombe, one of the partners, stated that they were very busy at present on sleighs. Their travellers go east as far as Quebec City. D. J. Cowan and R. G. Edgecombe are the partners composing this firm.

* * *

A consignment of the various lines manufactured by The Waggoner Ladder Co. of this city, has just been shipped to one of the leading firms in Liverpool, Eng. The probability is that another shipment will follow.

* * *

John W. Fogg, a former London boy, now general master mechanic and master car builder of The Chicago Terminal Transfer Co., was in the city on his way to attend a meeting in New York.

* * *

The plumbers of this city are sharing in the building boom. Every shop is busy and all express their difficulty in procuring workmen enough.

The fence wire season amongst the manufacturers and jobbers is now almost at an end; the season of about four months only has exceeded very largely that of any former year.

W.H.L.

GOOD SELLING PAINTS and GOOD SELLING VARNISHES

The Sherwin-Williams Paints and the Sherwin-Williams Varnishes have every element of saleability in them. They are of the highest quality in every respect—not good to-day and bad to-morrow — but always good — always giving satisfaction—never going wrong where rightly used. They bring back customers again and again—one can always sells another. They are well advertised—better advertised than any other paints and varnishes. They are backed by a selling organization capable of giving individual selling helps to each and every customer.

Whether you are selling paints or varnishes now or not, it will pay you to write for price and information of the S.-W. line.

A REMOVAL.

Geo. R. Prowse, manufacturer of cooking ranges, refrigerators, etc., 224 St. James street, Montreal, will remove in July to 208 McGill street. The new location is but a short distance from his present place and is suitable in every way, and at the same time affords more room for his growing business.

DEFEAT AMID PLEASURE.

On Saturday last the firm and employes of A. C. Leslie & Co., Montreal, held their first annual picnic in a grove at Cartierville and spent a most enjoyable afternoon. The chief event on the programme of sports was an exciting match of alleged baseball, in which Mr. Campbell's team defeated Mr. Leslie's by a score of 17 to 14.

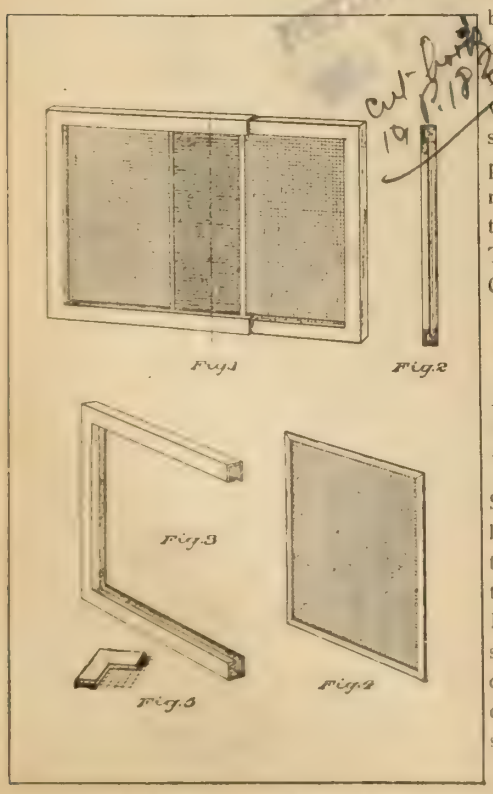
CATALOGUES, BOOKLETS, ETC.

IRON AGE DIRECTORY.

A business directory of 300 pages has just been issued by the publishers of The Iron Age, New York. It is the fourth annual publication of "The Iron Age Directory," and contains the names of advertisers in The Iron Age, the goods they manufacture and their addresses. There are over 5,000 different articles classified in this book. It should prove a very valuable reference to the readers of that paper, each of whom is sent a free copy. The price to others is 25c., a modest one considering the usefulness of the book and the expense and great care which must have been involved in its production.

CUTTS' WINDOW SCREEN.

C. M. Cutts & Co., Toronto Junction, Ont., are manufacturing a metallic window screen, which is meeting with much favor from the trade. They are made of galvanized or black iron frames and either galvanized or wood ends. Their construction ensures excellent wearing qualities. They are very light and neat, which adds neatness and beauty to the appearance of any window. They are an ornament to any house. They are made to fit on the outside of the window so as to raise or lower the window without removing the screen from the window. All parts may be duplicated, and when the wire cloth wears out it can be replaced at a very small cost.



VIEWS OF PARTS AND THE ENTIRE SCREEN.

32 Years of Experience

have taught us how to scientifically produce the best revolver the world has ever known for the least money. It has taught us how to make hard, accurate-shooting weapon and combine with it the heretofore unknown feature of **impossible accidental discharge.** It has the experience reflected in every

SHIPPERS MAKE COMPLAINT.

That the newly-subsidized Canadian steamship line to South Africa has neglected to take Canadian goods in order that American merchandise might be carried is a complaint that has been laid before the Canadian Manufacturers' Association. The statement was made that Canadian goods were left on the wharf while American shippers were allowed to send their stuff forward. Another complaint was that the Canadian steamers did not always sail on scheduled time, and that on this account goods suffered delay. These complaints will be forwarded to the Government.

A MANUFACTURER ON MUTUAL PREFERENCE.

PRESIDENT CURRY, of Rhodes, Curry & Co., manufacturers and car builders, etc., of Amherst, Nova Scotia, is one of those who firmly believe in the advantages that would accrue to Canada from mutual preferential tariffs between the Dominion and the Mother Country. Mr. Curry has considered the subject some years in advance of the statesmen who are now its advocates, and time and experience have but strengthened his first conclusions.

The textile trades and rolling mills would perhaps be the greatest sufferers among the more important industries from the adoption of preferential trade within the Empire, but other manufacturers, particularly those making agricultural machinery, sewing machines and the like, whose products are in competition with those of the United States and other great manufacturing countries on the British market, would greatly benefit. Our railways and steamship lines would double their earnings in very few years.

Mr. Curry suggests a preferential tariff of 10 per cent. in Great Britain in favor of colonial products. This would result in Canada's increasing in population and wealth even faster than the United States has done, and even the manufacturers as a whole would derive benefit from the arrangement.

A NEW FENCE-REPAIRING TOOL.

W. Farquhar Smith, Australia, is at present on a visit to Canada to introduce on the Canadian market a hand-machine for putting up and repairing wire fences. The machine, intended to supersede block and tackle and other wire fence-repairing tools, is patented in both Canada and the United States and the rights for it will be sold either outright or for royalty.

"DEAD LOCK" MALLEABLE HAY TOOLS.

In spite of the lightness of the hay crop in some sections of the country Caverhill, Learmont & Co.'s "Dead Lock" line of malleable hay tools, which were advertised in the last issue of HARDWARE AND METAL, are selling remarkably well. This includes carriers, steel track, slings and pulleys.

MACHINERY

NEW CANADIAN AUTOMOBILE.

THE Canada Cycle and Motor Company, Limited, Toronto, are placing on the market a handsome new electric automobile of their own design. From the appended cut will be gathered an idea of the general lines upon which the vehicle is built. For reasons which will appear later a Tonneau effect is given the narrow front and the curves originating there are carried out through the seat box, which is given a flare so as to provide a very wide and commodious seat. The automobile was designed by the company's consulting engineer, Mr. H. P. Maxim, of Pittsburg, subsequent to the automobile exhibitions at Buffalo, New York and Chicago. The designer has therefore had the advantage of having had before him in his work the best and latest ideas in automobile construction. The auto here shown is of the runabout type, and is designed to meet the demand for a neat, strong and serviceable automobile at a moderate price.

Power is provided by a 24-cell Eside battery of 11 plates per cell, giving a capacity of 120 amperes at the 4-hour rate of discharge. The cells are arranged in four trays, three of which are placed in the rear and one in the front of the box, so as to equalize the weight and relieve the strain on the rear tires. This battery drives a slow speed Westinghouse automobile motor, hung from the body of the vehicle, so as to get the benefit of the springs as well as of the tires in discounting jars. Transmission is effected by a roller chain running from a 10-tooth sprocket on the end of the motor shaft to a 40-tooth sprocket on a revolving rear axle, fitted with a differential gear, so that in turning a corner the two hind wheels may revolve at different rates of speed. In addition to the foot brake working on a drum on the rear axle, there is also a mechanical controller brake operating on the end of the motor shaft, so plaring the automobile under complete control.

The New Electric Runabout.

The wheels have been constructed of wood, which has been found most satisfactory for general work, and have been fitted with 30 x 3-in. Dunlop tires.

The vehicle strikes one as being strong as well as graceful, and the powerful battery and motor should appeal to chaffeurs who have had occasion to lament the futility of a discharged storage battery.

The first of the new vehicles turned out the other day was given a severe trial, running 40 miles up hill and down dale without tremor. The motors are guaranteed for a 40-mile run, but The Canada Cycle people are confident that they will run 50 without recharging the battery.

THE ROSSENDALE BELTING CO., LIMITED.

The Rossendale Belting Co., Limited, of Manchester, England, have opened a branch in Toronto at 57 Front street east. This company have had a branch in Montreal for upwards of four years, but such importance has been attached to Canada, that L. J. Rowland has come out from England to be general manager of the company's business in this country.

The Rossendale belt is known throughout the civilized world and is distributed from every important commercial centre in Europe, India, China and Australia. The belt is of extraordinary wearing and tensile strength and is made in all widths and lengths. It is unaffected by atmosphere, acids or water. All belts are anti-friction in character, outwearing wood and steel. W. E. Pilkington leaves the Quebec territory to represent his company in Ontario, and both by his personality and by the excellence of the belting he will offer to the trade, will be accorded a hearty welcome.

A NEW NIAGARA POWER CANAL.

THE Electrical Development Company, of Ontario, Limited, has entered into a contract with A. C. Douglass, of Niagara Falls, N.Y., for the construction of a new power tunnel on the Canadian side at Niagara, says Scientific American. In this contract The Electrical Development Company, of Ontario, Limited, is supposed to represent The Toronto and Niagara Power Company, which latter company has secured a franchise from the Victoria Park Commissioners permitting the development in question. The supposition is that The Electrical Development Company of Ontario, Limited, is to The Toronto and Niagara Power Company what The Cataract Construction Company was to The Niagara Falls Power Company during its initial development.

The new tunnel will have a length of 2,100 feet, while its height will be about 25 feet and its width about 20 feet. Thus, in length it will be a little less than the tunnel of The Canadian Niagara Power Company and less than a third of the length of the tunnel of The Niagara Falls Power Company, but its interior dimensions will be slightly larger than either of the tunnels referred to, and it is expected to have tailrace facilities for the development of 125,000 horse power. It will be lined from end to end with concrete or brick.

As a site for its power house The Toronto and Niagara Power Company has selected a spot above the station site of The Canadian Niagara Power Company and below the forebay of The Ontario Power Company. From the point where the company's wheelpit will be sunk the tunnel will run right under the river bed to the gorge and lower river, the outlet or portal of the tunnel to be behind the sheet of water of the Horseshoe Fall. In order that the work may progress with all possible speed, Contractor Douglass will sink a shaft 8 by 16 feet to a depth of 180 feet at the shore line above Table Rock, and from the bottom of this shaft he will run a lateral tunnel out under the river about 700 feet to the line of the main tunnel. This lateral tunnel will be 10 by 14 feet, and with the shaft will form an important work in itself. When the lateral tunnel has been driven to the line of the main tunnel under the riverbed, headings will be driven in both directions, upstream and downstream, and in this way the main tunnel will be driven, the excavated material being raised to the surface through the lateral tunnel and connecting shaft. It is understood that the contract price on the tunnel is about $575,000. It will take more than two years to build it.

Contractor Douglass is now at work lining the tunnel of The Canadian Niagara Power Company, and as he excavated this tunnel, he has his plant all on the ground ready for work on his new contract.

THE HIGH-SPEED TURBINE AS AN AIR COMPRESSOR.

THE most important of the later developments of the turbine is the discovery that the high-speed steam turbine may itself be used as an air compressor, with results that are comparable in point of efficiency and general utility with those obtained in the best types of steam turbines, says Scientific American. The air turbine, as it may very properly be called, is constructed much in the same way as the steam turbine. On a prolongation of the shaft of the steam turbine is fixed a series of moving blades which are placed alternately with rings of stationary blades, or "guide blades," as they are called, which extend inwardly from the walls of the air turbine cylinder. The action of the air turbine, is, of course, the reverse of that of the steam turbine, the first ring of the blades forcing the air forward parallel with the axis of the turbine at a low pressure, and the succeeding circles of blades increasing its pressure, until, at the exit, it issues at the maximum designed pressure in a continuous steady blast. These machines are of the Parsons type, and bear their inventor's name. It is not necessary, of course, that the air turbine should be driven by the steam turbine, as described above, and, indeed, there is now at work in a lead works on the Tyne, England, an air turbine which is driven by an electric motor and supplies 3,500 cubic feet of air per minute under

a pressure of 4 inches of mercury. According to Parsons, this plant showed an increase of 30 per cent. in output of gas because due to the instalment of the turbine blower, an increase which was primarily due to the increased steadiness of the blast. All the advantages of economy and convenience which are present in the steam turbine are shown in the air turbine. The repair bill is as light in the one case as in the other, and the compressor is in every respect as efficient. There is now nearing completion for a mine at Johannesburg, a turbine, high-pressure, two-stage air compressor, which is designed to show an output of 1,000 cubic feet of air per minute at a pressure of 80 pounds to the square inch.

HAMILTON BRIDGE WORKS PROSPEROUS.

The Hamilton Bridge Company celebrated an epoch in their development and at the same time more firmly cemented the cordial relations which have long existed between the firm and their employes by a dinner and ball Friday night last on the occasion of the opening of their new 140 x 204 ft. addition. The employes of the company, with their wives, sisters and sweethearts, to the number of about 400, were the guests of the president, William Hendrie, and as Saturday was made a holiday to allow the diners and dancers to recuperate there was no spectre of the morning roll call to mar the festivities.

The dinner was served in the new machine-shop, which was handsomely decorated for the occasion with bunting and palms. The superintendent, A. H. Phoenix, presided, and after cafe noir was disposed of, offered the only toasts of the evening: "The President" and "The Company." Mr. William Hendrie, on responding, was presented with a handsomely engrossed and illuminated address, expressive of the employes' appreciation of the president's thoughtfulness, and Mrs. Hendrie was handed a beautiful basket of flowers by Miss Phoenix.

Major Hendrie, in replying for the company, thanked the employes for the whole-souled interest they had in the past taken in the welfare of the company, and prophesied that the shops would be two times their present size in the not distant future.

The company are installing new machinery and, so soon as the press of work allows, will replace the old parts of the works by new structures. In the meantime they are rushed with work. Among the contracts on hand are the following: The structural steel for The Ontario Cement Co., Brantford, Ont., structural steel for The Raven Lake Cement Co., in Victoria County; a viaduct on the main line of the G.T.R., between Toronto and Hamilton; several large bridges for the C.P.R. on various divisions of the line, including work on the mountain section; the structural steel for The Deering Co., Hamilton, including the malleable iron foundry, which is to be 1,000 feet long; a transforming station and power houses for The Canadian Niagara Power Co., at Niagara Falls, Ont.; swing bridges for the Dominion Government on the Welland and Trent Valley canals, and 75 highway spans for different points in Canada.

MACHINERY FOR ONTARIO ROADS.

The Seventh Annual Report of the Commissioner of Highways for Ontario, now to hand, contains some very interesting and encouraging information on the progress of the Good Roads Movement throughout Ontario. In over 100 townships the statute labor system has been either wholly or partially abolished and modern methods introduced. The report is illustrated with cuts of improved roads, urban and rural, from various parts of the province, as well as by stone crushers, graders, steam rollers and other road-making machinery. These imposing pieces of machinery form a striking contrast to the old plow and scraper which did yeoman service when nothing better was available, but are now inadequate to constitute a complete road-making outfit.

The passing of the statute labor system and the introduction of modern methods has created a demand for appropriate machinery which has grown rapidly of late years and is destined to still more rapid growth. Our machinists and foundrymen would do well to look carefully into this field for development.

MACHINERY AND ELECTRICAL NOTES.

THE case of the City of Kingston against The Kingston Light, Heat and Power Co., is to be appealed to the Privy Council. The report of the arbitrators, which has been upheld by the courts, stated the value of the company's franchise at $80,000; the city appeals against this.

Machinery is being daily received for the Wiarton, Ont., woollen mill.

A branch of The B. R. Seabrooke Machinery Co., Victoria, B.C., will be opened at Vancouver, B.C.

The Perrin Plow Co., of Smith's Falls, Ont., Limited, have been authorized to increase their capital from $60,000 to $100,000.

The Match Machine Co., of Springfield, Ohio, is in communication with Kingston, Ont., with a view to establishing a factory there.

A plant for the manufacture of hoops is to be installed in the stave factory at Sand Point, Que., which will employ an additional 30 or 40 men.

The Hamilton Motor Works, Hamilton, Ont., are getting out plans for a 5-h.p. stationary gas and gasoline engine, suitable for those requiring power in small quantities.

A growing demand is reported from the trade for small gasoline engines of from two to eight horse power, for pumping, grinding, cutting wood or other similar work.

Fire did about $1,500 damage to John Elkin's brick works, Granby, Que., recently. Considerable machinery was damaged. This will be repaired or replaced at once.

The Ontario Lantern Co., in addition to oil lanterns and gas burners, are turning out from 1,500 to 2,000 incandescent electric lamps per day at their works in Hamilton, Ont.

A new electric rotary of modern design has been received by The B. C. Electric Railway Co., Victoria, from Peterboro, Ont. It is stated that it will double the power for the car system of Victoria.

The Eagle Copper Co., incorporated in Michigan, have been authorized to carry on a mining, milling and reduction business in Ontario; capital, $50,000. Attorney, Fred. Rogers, Sault Ste. Marie, Ont.

The Deering division of The International Harvester Co., Chicago, will send nearly 500 cars of implements to the Argentine Republic next season. Hasenclever & Co., Buenos Ayres, large importers of implements, will handle much of this.

The Brandon, Man., felt factory has recently been purchased by B. N. Fraser, who will re-organize and enlarge the plant to put it in shape for manufacturing blankets, yarns, flannels, etc. Mr. Fraser will shortly go east to purchase machinery.

The Westport Electric Light Co., Ltd., Ont., have been incorporated to construct an electric light plant and sell electricity for heat, power and light; capital, $40,000; directors, J. M. Stoness, A. W. Gray and G. H. Berry.

Forest city gossip

Crosby, Limited, have been incorporated with $250,000 capital to manufacture machinery and metal goods of all descriptions. Directors: C. R. Morrison, F. B. Brown, P. W. Fulford, S. J. R. Westall, Port Huron, Mich.; and Maurice Krakow, Sarnia, Ont.

The Canadian Northwest Steamship Co., Limited, Port Arthur, Ont., have been incorporated with $250,000 capital, to carry on a passenger and freight service on the Great Lakes, the directors being H. A. and F. S. Wiley, and G. M. Murray, Port Arthur, and Hamilton Cassels, Toronto.

The Canada Iron and Foundry Co., Hamilton, Ont., have purchased ground in the east end of the city whereon they purpose erecting a new 140 x 160-ft. foundry for making heavy castings. It is expected that the new foundry, which will be operated in conjunction with the present plant by the G.T.R. yards, will go up this fall.

The Nova Scotia Steel & Coal Company will commence operating their new limestone quarries at Point Edward, N.S., shortly. An extensive plant including a large crusher has been installed. They have now a line joining the I.C.R. over which their limestone will be shipped. The Point Edward areas will be vigorously developed.

The Canadian Bullock Electric Mfg. Co., Limited, Montreal, have been incorporated with $1,000,000 capital and A. E. Greenshields, A. F. Cayford, R. T. Hencker, F. H. Leonard, jr., and A. Collyer, as directors, to manufacture and deal in electrical apparatus, machinery and supplies; to develop water powers, erect and equip factories, etc.

The Phoenix Bridge & Iron Works, Limited, Montreal, have been incorporated with $500,000 capital, with J. N. and R. A. E. Greenshields, R. T. Hencker, B. Shepherd, and W. G. Mitchell as directors, to manufacture, sell and repair tools, machinery, engines, electrical apparatus, railway cars, trucks, carriages, vessels and other articles all or in part of iron, steel or other metal.

The Dominion Belting Co. is one of the latest additions to the industries of Hamilton, Ont. The works are installed in a new two-storey 50 x 150 ft. brick building under the superintendence of A. L. Campbell, late of The Gaudy Belting Co., Baltimore, Md. The works are the first of the kind in Canada to turn out stitched oiled cotton duck belting and are meeting with an encouraging demand for their goods.

DO NOT GO HUNTING ALL OVER CHRISTENDOM when you want steel stamps, stencils, stencil inks, burning brands, name plates for manufactured articles, machines, etc., brass labels for lanterns, tinware, etc., Pew number plates, hotel key tags, hat badges, police badges, time checks, badges for railroads, baggage checks, etc., but send to the

Window and Interior Displays

Timely Hints and Suggestions.

STUDY YOUR DISPLAYS.

WHEN the merchant makes the excuse for poorly arranged windows that he "never was much use for such things," one can take it for granted that, in addition to this, he is indolent and lacking in ambition.

Nobody in these days will put themselves on record as denying the selling value of windows, but, instead, some will try to hide behind their lack of taste. Such an excuse is no reason for such old-fashioned methods of doing business.

By carefully studying other windows, whether in his line or not, the general principles can be observed, and once that much is acquired the rest is merely a matter of practice and common sense.

The pushing merchant keeps his eye open for ideas wherever he can find them, and every trip away from his own town supplies him with plans for his windows.

Attention should be paid to all that can be read on the subject in trade newspapers, daily papers or elsewhere, and every visitor made to furnish his quota of ideas for a good window.

One of the very best schemes is to solicit the aid of the travellers. They have seen most of the windows and can usually furnish enough to arrange a half-dozen show-windows. The outline is all that is necessary, as the details can be easily worked in by any merchant.

THIS WEEK'S ILLUSTRATION.

The background of this window is made up of panes of glass, and to the frames are hung saws of all prices and sizes. One pair of frames exhibits chisels and another knives, and a low shelf just in front is arranged with rough articles, with saw-lathes at each side. On the floor and out to the front are small tools, of which there is a vast quantity in the hardware stock.

The price tickets on the saws are particularly neat and attractive, and the small goods are arranged in tasty designs. The window is very easy to trim, as no fixtures are required, and outside of the mere placing of the goods there are only the hooks to insert in the window frames.

An Attractive Tool Window.

NOVA SCOTIA STEEL.

The regular half-yearly meeting of the Nova Scotia Steel Co., was held in Montreal on June 18. President J. F. Stairs was in the chair, and gave out the statement afterwards that the reports submitted by the officers showed the business to be in good condition. Each department was increasing the volume of its output, and there had been no difficulty in finding a market for all. Building operations were progressing rapidly towards completion, and it was expected that the blast furnace at Sydney would be blown out before the end of the year.

MAY ERECT COKE OVENS.

George H. Bradbury, managing director of The Northwest Coal and Coke Co., British Columbia, has gone to England to conclude negotiations for the necessary capital for the erection of coke ovens at the company's works and for the vigorous prosecution of the development work.

BANK OF HAMILTON'S ANNUAL MEETING.

IN the Head Office of the institution in Hamilton the thirty-first Annual Meeting of the Bank of Hamilton was held Monday. On motion, Mr. A. G. Ramsay, Vice-President, took the chair, and Mr. J. Turnbull, General Manager, acted as Secretary.

On behalf of the Directors, Mr. Ramsay submitted the following report:

REPORT OF THE DIRECTORS.

The Directors beg to submit their Annual Report to the Shareholders for the year ended 30th May, 1903.

The balance at credit of Profit and Loss Account, 31st May, 1902, was		$ 44,732 84
The profits for the year ended 30th May, 1903, after deducting charges of management, and making provision for bad and doubtful debts, are		335,389 20
From which they have declared:—		$380,122 04
Dividend 5 per cent. paid 2nd December, 1903	$100,000 00	
Dividend 5 per cent. payable 1st June, 1903	100,000 00	
	$200,000 00	
Carried to Reserve Fund from Profits	100,000 00	
Carried to Rebate on Current Bills Discounted	5,000 00	
Annual amount written off Bank Premises, etc., account	5,000 00	
	110,000 00	
	$310,000 00	
Balance of Profit and Loss carried forward		$ 70,122 04

The Directors have to report with great regret the death of the Hon. A. T. Wood, for long a valued and efficient member of the Board.

John S. Hendrie, Esq., M.L.A., was chosen to fill the vacancy thus created.

This report is my last official act as President of the Bank, as it is to be followed by my resignation as a Director, a position which I have occupied since the organization of the Bank, filling the offices, first of Vice-President and then of President, and during that long period of over thirty years I have watched with much care and interest the rise and progress of the Bank from its small beginning through its whole career of uninterrupted prosperity to its present large proportion and extended sphere of influence. In retiring, I desire to thank the Shareholders for their oft-repeated marks of confidence, and I feel proud to be able to leave the affairs of the Bank in the satisfactory condition disclosed by the Report.

JOHN STUART,
President.

Hamilton, June 6, 1903.

In moving the adoption of the report, Mr. Ramsay pointed out that the profits of the year have been of a very gratifying and satisfactory character, considerably exceeding those of the previous year, as well as those of any preceding similar period. He alluded also to the large increase in deposits during the year, showing the increase of confidence on the part of the public in the Bank. He also referred with great regret to the retirement from the Board of Mr. John Stuart, after a continuous efficient service upon it since the organization of the Bank in 1872, and called attention to the fact that at a later stage a resolution bearing on the subject would be submitted.

Mr. Ramsay concluded by moving the adoption of the report, which was seconded by Mr. George Roach, and carried.

Mr. Ramsay then asked Mr. Turnbull to read the agreement entered into between the Bank and Mr. John Stuart, which provides for a retiring allowance of $5,000 a year, payable monthly in advance, for life, and then moved that the agreement of the 6th June, 1903, between the Bank of Hamilton and Mr. Stuart, the late President, be confirmed by the Shareholders.

Mr. William Hendrie, as an original and perhaps the largest Shareholder, seconded the motion, which was carried unanimously.

It was moved by Mr. Samuel Barker, M.P., seconded by Mr. Edward Martin, K.C., that the thanks of this meeting be given to the Directors of the Bank for their services during the year.

The motion carried unanimously, and Mr. Ramsay returned thanks for himself and the Board.

Moved by Mr. William Hendrie, seconded by Mr. David Kidd, that the thanks of this meeting be given to the General Manager, Assistant General Manager, Inspectors, Agents and other officers of the Bank, for the efficient performance of their respective duties.

Mr. Hendrie, in moving the resolution, referred to the necessity for an efficient staff of officers, and thought that they should be well paid. The motion was carried unanimously.

Mr. Turnbull, in reply said:—

I am glad, on another annual occasion, to have the opportunity of returning thanks, on behalf of my brother officers and myself, for the kind and hearty vote

GENERAL STATEMENT.

Bank of Hamilton, Hamilton, May 30th, 1903.

J. TURNBULL,
General Manager.

of thanks which has again been offered to us. It is a special gratification that a more than usually prosperous year has, perhaps, added zest to it. The Bank has done, I think, very well indeed, and it is reasonable that the Shareholders should be well satisfied with the results of the year's operations. Our losses have been a little less than normal, and, so far as I know, we have a clean and good business, with the appearance of abundant promise for the future. The general prosperity of the country continues, and I see nothing ahead to indicate a cessation. The large immigration presently existing, especially in the Northwest, must bring a good deal of money into the country, and, what is worth more than money, a good class of settlers, prepared, and destined, no doubt, to take a part, like their predecessors, in the rapid and permanent upbuilding of this great country. Manufacturing is becoming more and more extended, and we are becoming less and less dependent upon foreign goods. On the other hand, our exports keep increasing as to quantity and improving as to quality. We keep learning, year by year, better methods of manufacturing, packing and shipping, and the result, of course, cannot fail to bring not only largely increased returns, but much more profitable ones. A danger to be guarded against, of course, in a rapidly growing country like this, is the tendency to become oversanguine and over-speculative. The banks and other large institutions can do a good deal to discourage this tendency, and, for our part, we have done, and will continue to try to do, our best in this direction. There is no doubt that there is a real danger in this characteristic of ours, and it is the part of all prudent persons and those who have the best interests of the country at heart to spare no effort to discourage such business methods and enterprises, and to try, by precept and example, to confine all over whom they have any influence within the paths of moderate simplicity, careful living and good sense.

The Shareholders may pardon me on this occasion if I detain them for a few moments, in an effort to give a little retrospect of what has passed during the fifteen years in which I have been in the Bank's service. The time is not unfitting, and the number of years I have named represents, perhaps, a period sufficient to justify a fair afterview of what has passed. I wish it to be understood, however, that I desire to join my co-officers in anything I have to say, as no one can be more sensible than I am of the co-operation I have received, and the impossibility of accomplishing what has been accomplished, without their ready and faithful help.

In 1888, when I joined the service, the Bank's deposits were about two millions and a half, its total assets under five millions, its capital one million, and its rest three hundred and sixty thousand, the dividend being eight per cent. To day, as you will see from the report, the deposits are nearly sixteen millions, the total assets nearly twenty-two millions, the capital two millions and the rest one million seven hundred thousand, or, with undivided profits, one million seven hundred and seventy thousand. Of the additions to reserve, the Shareholders have, at the times of the various new stock issues, contributed five hundred and ninety-seven thousand, which leaves eight hundred and thirteen thousand earned out of the surplus profits, or an average during the fifteen years—good years and bad years—of between fifty-four and fifty five thousand a year. It may be of some interest to say that the average earnings during these fifteen years are 12.41. The experience, therefore, of the last few years indicates that the Bank's business is becoming more and more profitable, even allowing for the effect produced in our favor by the rapidly accumulating reserve. When I came to the Bank in 1888, I found that business was mostly confined to Hamilton and a few points on lines of railway directly identified with this city. The number of branches at that date was ten. I could not help being impressed with the possibilities which Hamilton presented, nor could I see any reason why the business of the Bank should be confined within the comparatively narrow limits which had been customary. I resolved, therefore, with the consent of the Directors, to widen out its scope, and to make the most of the inherent importance of this city, and the possibilities of the place and neighborhood combined with the general opportunities which the condition of the country presented, to make the concern a more important factor in the financial affairs of the country than it had been before.

One of the first steps was the opening of an office in Toronto, where, I may say, we have almost from the very first done a profitable and satisfactory business, not only adding considerably to the revenue of the Bank, but materially to its importance and reputation. The next step was to open some agencies wider afield, not confining ourselves to the particular lines of railway to which we had been hitherto mostly limited. Then, after consultation with the other chief officers of the staff, and with the consent of the Directors, we began opening branch offices in this city, and the satisfactory result of this policy is self-apparent and need not be emphasized.

The next step was to embrace the opportunities which Manitoba presented, and an office was opened in Winnipeg and in one or two apparently favorable points in the Province of Manitoba. These we have gradually extended, and some offices in the Northwest Territories have also been added. Our Manitoba and Northwest policy has been decidedly successful, and we have not only obtained very material profits from that section of the country but have, probably, more efficiently by that means than any other spread the name and reputation of the Bank throughout the country. It is quite well known that in Manitoba the name of the Bank of Hamilton stands high, and it is recognized as a substantial and important part of the financial system of that district.

Three or four years ago we added British Columbia to our field of operations, and, while we have only two offices there so far, enough has been done to show that we have made no mistake in going, and that we have just made a beginning of what may ultimately be an important field of usefulness and profit.

The general result of the above has been that instead of the ten agencies which we had when I joined the Bank in 1888 we have now fifty-six, and, while some of them have admittedly not been such decided successes as we had hoped for, none has been unsuccessful, and nearly all have been highly successful.

It is necessary to repeat that these results have been accomplished by the heartiest co-operation on the part of the staff, and all have been effected with the consent of the Directors.

I have the strongest faith in the position and prospects of this city. The Hamilton merchants, manufacturers and other financial interests are spreading themselves all over the country, and making their mark wherever they go, and it would be out of all reason if the Bank of Hamilton did not take its full part. I hope, therefore, that we shall continue the policy of judicious and yet energetic extension, and that with the next and all future Boards of Directors there will be the heartiest co-operation in the carrying out and elaborating of this policy, and that the Bank of Hamilton will continue to hold that important relative place among the financial institutions of the country, to which, in my judgment, it has attained now.

Mr. Ramsay took the opportunity now to say that, as had been already announced, he was, after twenty years' service as a Director, desirous of retiring from the duties of that position, and warmly thanked the Shareholders for the confidence that had been placed in him by continuous election as a Director during these years.

Mr. Alexander Bruce moved a vote of thanks to Mr. Ramsay, which was seconded by Hon. William Gibson, and carried unanimously.

The scrutineers reported the elections of the following Directors: George Roach, John Proctor, Hon. William Gibson, A. B. Lee, John S. Hendrie, George Rutherford, J. Turnbull.

At a subsequent meeting of the Directors, Hon. William Gibson was elected President, and Mr. J. Turnbull, Vice-President.

RETAILER VS. DEPARTMENTAL.

In many towns there is a great outcry by the merchants against the departmental stores. This is not the case in Arthur, however, for our business men carry very replete and well-assorted stocks, meet the prices of the departmental stores and very often find no trouble in underselling them.

THE above is from the preface of a 96-page catalogue issued by D. Brocklebank, retail merchant, Arthur, Ont. Apart altogether from the enterprise of Mr. Brocklebank in publishing such an extensive catalogue for distribution among the residents of his town and the neighboring farmers, this paragraph is worthy of comment in the light it throws on the way retailers in some parts of the country are meeting the competition of the departmental stores.

It is not long ago since the majority of retailers manifested an inclination to fear the departmental stores, to say that owing to the extensive operations of the latter the retailer had not a fair chance to compete. Time has, however, demonstrated that in at least one town in Ontario this is all changed. Now, instead of fear, we see confidence; an expression of ability to "meet and often undersell" the big stores.

This is as it should be, and the example set by Mr. Brocklebank should be followed not merely by the merchants of Arthur but throughout the country. It is a fact that the selling expenses of the departmental stores are high, which counterbalances in a large degree the ability of the big stores to buy cheaply because in large quantities.

In another respect the extract above is worthy of note, in that it shows loyalty to his own town and to his fellow-merchants that does Mr. Brocklebank credit and speaks well for the relationship existing among the business men of the place. It would be better for all concerned if a similar spirit prevailed in every town.

THE VALUE OF REPUTATION.

THE advent and wide use of package and canned goods have served as possibly no other factor has done to emphasize the necessity of a good name in the grocery business. It is not merely sufficient that the grocer have the reputation of being honest of purpose and sound in his judgment, but he must convince his customers that he knows the grocery business and is acquainted with the merits of the goods he sells.

So many new foods and fads are offered to the consumer that if one tried them all life would virtually be a series of experiments, and it is almost fair to add that digestion would be impaired in many cases.

So the average customer, when a new food is offered, wants advice as to its merit. Possibly some neighbor has experimented with it and kindly volunteers an opinion. As a rule, however, the customer looks to her grocer, confident that he has tried it or at least heard the opinion of other customers who have. His opinion is asked, and he should be ready to give it. Moreover, he must remember that this opinion is likely to either enhance or diminish his reputation. If he recommends and the customer finds the goods worthy of the recommendation, she will feel more confident of his judgment in the future. If he can but say that some customers like it and others do not and that he cannot express any personal opinion as he has not tried it, the customer will probably decide to purchase something else, and will feel that her grocer is not as careful to "find out about things" as he might be.

Some grocers make a point of putting in stock nothing but what their judgment commends; some stock everything they are asked for and have no opinions. A better way than either would be to keep everything in general demand, but be ready to express a personal opinion regarding the respective merits of the goods in stock.

The grocer whose judgment is sound and whose knowledge is wide has a wonderful influence over his customers. He can easily effect the sale of any line, and the manufacturer must soon learn that his friendship is a valuable asset. In fact, if a manufacturer of any food makes a really good article, he need not worry about the good opinion of the people if he can win the approval of the trade. They can convince the people.

Notice To Advertisers.

Wednesday next being the 1st of July and a public holiday, the forms of HARDWARE AND METAL will go to press one day earlier than usual for the issue of July 4th. Will advertisers please note that all new copy and changes must be in our hands on Tuesday, June 30th. We cannot guarantee to change advertisements after that date.

THE PUBLISHERS.

UNITED STATES STEEL CORPORATION.

Information has been received by HARDWARE AND METAL from an authoritative source to the effect that the representative of the United States Steel Corporation, who examined possible sites for their projected Canadian works at Toronto, Hamilton and along the Welland canal, have returned and made their report. It has, however, not been decided where the new works will be located, though it is probable the site chosen will be on the west side of the Welland canal.

To be a successful business man, a merchant must love his business. It is true that the tasks one likes best are the ones that one does best. If a merchant takes a keen enjoyment in devising schemes for the development of his business, those schemes are likely to be good ones.

CANADA AND THE RECIPROCITY QUESTION.

THE movement in favor of reciprocity with Canada is gradually assuming important proportions in the United States. In the eastern, in the western and in the middle states, the question is receiving more or less attention. The Reciprocity League, aided by some of the daily and trade newspapers, is actively engaged in educating public opinion in favor of the idea; and the lessons which the league and the press are endeavoring to teach are evidently not unavailing.

Only those who are watching closely the movement, as reflected in the columns of the United States newspapers, have possibly any idea of its extent. And it is significant that the discussion is practically confined to those who are in favor of closer trade relations with the Dominion.

It seems to be taken for granted that reciprocity with Canada would be a good thing for the United States. The manufacturers in the eastern and middle states want freer access to the Canadian market. Exporters in general want it, and the millers in Minnesota hope by means of a reciprocal arrangement to be able to buy Canadian wheat without being compelled to pay the present heavy duty of 25c. per bushel. They recognize the advantage that the millers of Canada ultimately will have in the export trade and naturally they desire to be on an equal footing with them.

Judging from the tone of some of the articles in the newspapers and some of the speeches delivered on public platforms, it is evident that the opinion obtains among not a few that reciprocity with Canada can be had for the asking. A greater mistake was never made. There was a time when Canada would have jumped at reciprocity with the United States on almost any terms. That day has long since past.

When the joint high commission met in 1898 the fact that reciprocity with the United States was to be one of the questions to be considered was extremely distasteful to a great many Canadians. Canada had been so humiliated in the years gone by when she courted reciprocity with the United States that the word reciprocity has become almost an offence to her, as far as it applies to the neighboring republic. At any rate, she has become decidedly indifferent in regard to the question. Seldom indeed do we find any reference to reciprocal trade relations with the United States in our newspapers. As a buestion of practical politics it has less life to-day than it ever had in the history of the country, and we do not believe it is possible under existing conditions to get it out of its passive and comatose state.

It is well known that the particular description of reciprocity that the manufacturers of the United States want is that which will not reduce in the slightest degree the high protection that they now enjoy. The resolutions adopted at the convention called a year or two ago for the special purpose of discussing the question of reciprocity prove it. As The New York Journal of Commerce intimated at the time, what they wanted could not by any stretch of the imagination be called reciprocity. Their doctrine is one of take, not give and take. Consequently it is a misnomer to call it reciprocity.

But aside altogether from that phase of the question, it is not forgotten that the Canadian tariff is only about one-half that of the United States, and the question which disturbs most people is how, by any reciprocal arrangement, the tariff of the two countries can be brought more nearly on an equality as long as the United States stick to their ideals with a persistency that shows no evidence of relaxation.

Taking everything into consideration, is it any wonder that the reciprocity question excites no interest in Canada notwithstanding the importance that the movement is assuming in the United States?

THE CANADA SOUTH-AFRICA TRADE

THE Allan Line has been withdrawn from the joint steamship service to South Africa, which was inaugurated by that line and the Elder-Dempster and Furness lines, and the trade will now be divided between the two latter.

The service never did run smoothly or give perfect satisfaction to all concerned, for which there are different reasons given. The exporters in some cases complained that the steamships gave a preference to American merchandise, taking cargoes from United States sources to the detriment of Canadian shippers. The steamship companies, however, say that they had to fill up on American goods, as they could not get complete cargoes from Canada. Another complaint was in regard to the irregularity of sailings. But it appears that this was caused, to a great extent, by the poor facilities for unloading at South African ports, the harbors there lacking proper accommodation. These and other reasons are given by the shipping companies for the unremunerative character of the service.

Meanwhile, however, the Furness and Elder-Dempster lines will continue to run steamships between Canadian and South-African ports, being apparently not so easily discouraged as the Allan people, and perhaps actuated by a keener desire to foster trade between the two colonies.

It was not to be expected that everything would run along with no obstacles whatever in this service. Indeed, considering that it is of only very recent years that the South-African and Canadian colonies have evinced any desire to trade with each other more than with foreign countries, it would not have been surprising if regular sailings had been out of the question altogether. As it is, under the conditions prevailing, our export trade of nearly $4,000,000 for 1902 gives every indication of greatly increasing. If so, it will be due in no small measure to the perseverance and foresight of the Elder-Dempster and Furness companies, who will have every right to reap the reward of a large and profitable trade. These steamhis lines deserve every encouragement at the hands of the Canadian exporters. There are, it is admitted, too many bottoms now for the volume of trans-oceanic trade that is to be done, but this joint service, if we mistake not, was heralded and looked upon as more of a movement to better trade relations between the two countries than as a money-making scheme. It was perhaps unavoidable that one of the lines concerned should withdraw, but it is regrettable that it should have been the

Allans, rather than one of the others, whose interests and name are less identified with Canadian commerce and shipping.

THE PROPOSED NEW GOVERNMENT ROAD.

A RUMOR comes from Ottawa to the effect that the Dominion Cabinet has decided to build a Government railway from Quebec to Winnipeg.

What truth there is in the rumor we cannot at the moment state. It is a well-known fact, however, that public opinion has for some time been in favor of such an undertaking, while, in addition to this, there is the expressed opinion of some of the Ministers in favor of the idea. The rumor, therefore, is more likely to be founded upon facts than upon fancy.

The idea seems to be for the Government to build a road, either single or double track, and give different railways running rights over the same.

Public sentiment in Canada is strongly in favor of Government ownership of railways in theory, but there has been hesitancy in putting this idea into practice on account of the lack of faith in the ability of the Government to successfully operate the road. For the Government to merely build a road from Quebec to Winnipeg and leave its operation to one or more companies, would evidently, therefore, satisfy all interests—those who are in favor of Government ownership as well as those who are not—and at the same time protect the country from loss.

With a road constructed from Quebec to Winnipeg, the route to Europe from the Great West would be very much decreased and in comparison with the routes via United States ports, would be from 800 to 1,200 miles shorter. But perhaps, one of the greatest advantages of a road of this kind would be the cheapening of freight rates, to say nothing of the greatly increased facilities which it would afford.

The proposal seems to be one that should receive the endorsation of the business men of the Dominion ; in fact some boards or trade are already on record in its favor.

TRADE IN COUNTRIES OTHER THAN OUR OWN.

Binder Twine in the States.

CONDITIONS are unsatisfactory, owing to the variety of prices, and to the uncertainty as to the probable requirements for twine. The excessive rains throughout the country have retarded the ripening of grain, and consequently postponed harvest. The straw in many parts of the country is large and the growth rank. Floods, on the other hand, have destroyed crops in many cases, and have put some stocks of twine under water. Quotations in the east range from 12 to 12½c. per lb. in small quantities for sisal and standard. Reports from the West indicate a range of quotations from 10 to 13½c. in less than carload lots, according to locality and supply. There seems to be a general impression that about the same amount of twine will be required for the country as last year, but this is more or less supposition under the condition prevailing. The belief is expressed in some quarters that scarcity of twine, if there is any, will be largely confined to sisal.—Iron Age.

Pig Iron in Great Britain.

The pig iron market has not shown any important change during the past week ; but if there has been any appreciable alteration at all, it has been in the direction of an improvement rather than otherwise. Prices have certainly been a little firmer in some cases, and in others, while there are not lacking signs of weakness, there is no quotable change to report. Warrants have been much steadier. Most of the business has been done in Cleveland, speculators being disinclined to operate in Scotch owing to the small stock, and the prices at which they have changed hands have fluctuated less than for some time past. This circumstance has exercised a beneficial influence on the market generally, and makers' quotations have, for the most part, been well maintained. No. 3 Cleveland foundry has remained at 46s., the figure given in our last issue, and the lower qualities of iron in Middlesbrough are no longer relatively cheaper. The shipments from the Tees are very satisfactory. Notwithstanding the loss of the American trade, they are unusually large, not only to Scottish and other home ports, but also to oversea destinations. There is a fairly steady tone in hematite iron. On the East Coast parcels of mixed numbers command 57s. 3d.; in Barrow, 59s. 6d.

Public stores stocks in tons :

Totals	178,850	210,700	31,850 Net decrease

—Iron and Coal Trades Review, June 12.

Glasgow Pig Iron Warrant Stores.

The recent report of Connal and Company, Limited, on the stocks of pig iron in the warrant stores shows that these stocks have been reduced to such an extent that at the end of May the warrants in circulation represented only 15,000 tons. After the great boom between 1871 and 1874 there was a steady decline in the iron trade, and iron accumulated largely and rapidly. Between 1880 and 1890 the stocks were of the following proportions :

Stocks in Glasgow Iron Warrant Stores.

1st January.	Tons.
1880	745,000
1881	739,000
1882	940,000
1883	836,000
1884	835,000
1885	821,000
1886	1,050,000
1887	1,183,000
1888	1,228,000
1889	1,224,000
1890	1,035,000

On December 31, 1888, the total was 1,228,833 tons more than on May 31 last. It is possible that the system may by-and-by entirely disappear. The American iron trade has always refused to countenance warrant stores for pig iron, and gets on very well without them.—The Iron and Coal Trades Review.

Liverpool Tinplate Trade.

There has been more inquiry during the past few days, and a fair proportion of business has resulted. Prices are, however, a shade lower on the week, and no doubt the present low values, together with the high prices ruling for raw materials, have induced buyers to come into the market and make their purchases. The present position is, without doubt, a very unsatisfactory one, from the manufacturers' point of view, and many of them are simply selling from hand to-mouth, refusing to book forward to any extent at current rates. 14 by 20 cokes could be had during the week at 11s. 7½d. and 11s. 9d. per box, f.o.b. Wales, and 12s. and 12s. 1½d., f.o.b. Liverpool. Makers' present quotations are :—Bessemer cokes, I C 14 by 20, 112 sheets, 108 lb., 11s. 10½d. to 12s. per box ; Siemens-Martin steel at 1½d. extra, f.o.b. Wales.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, June 19, 1903.

HARDWARE.

THERE has been a fairly satisfactory volume of trade in general hardware here, with nothing of an unusual character to report, with the ruling characteristics being normal to this period of the year. Barb and galvanized wire furnish a quiet trade, while pressed spikes are steady to firm, certain sizes having been taken from the regular list to be sold subject to 25c. per 100 lb. net extra. Cut and wire nails continue to furnish a good movement and there has been an advance of 2½ per cent. in countersunk head horse nails, which are now quoted 55 per cent. off the list. Horseshoes furnish a quiet movement, and there has been a good healthy movement in screws. Cordage is firmly held.

BARB WIRE.—There is only a quiet trade noted this week. We quote: $2.80 per 100 lb. f.o.b. Montreal, and $2.55 f.o.b. Cleveland. Carlots of 15 tons are quoted f.o.b. Cleveland at $2.45.

GALVANIZED WIRE.—A fair trade is noted this week. We quote as follows: No. 5, $3.70; No. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—There is a quiet trade passing. Quotations are: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE STEEL WIRE.—Business fair. We quote: 25 per cent., with extras: 1 and 2-lb. hanks, 25c. per 100 lb.; ½-lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—Discounts unchanged at 60 per cent., with a quiet trade in progress.

PRESSED SPIKES.—There is a quiet trade in these. Discounts remain 20 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax. Some sizes have been taken off the regular list and are now subject to 25c. per 100 lb. net extra.

FENCE STAPLES.—These are in fair request. We quote as follows: $3 per 100-lb. keg for galvanized and $2.80 for bright, with 25c. extra for 25 and 50 lb. packages.

CUT NAILS.—There is a good movement in these, while prices are unchanged on the basis of $2.15 per keg f.o.b. Montreal.

WIRE NAILS.—There is a fair movement in these and jobbers have less complaint to make regarding deliveries. We quote carlots at $2.40 and small lots at $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

HORSE NAILS.—These continue firm this week and there has been an advance of 2½ per cent. in the price of countersunk heads. We quote: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, 55 per cent.; "C" brand, 40, 10 and 7½ per cent. off; "Monarch," 50 and 7½ per cent., and "Peerless," 50 per cent.

HORSESHOES.—Fair trade moving. We quote: Iron shoes, light and medium pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90; No. 1 and smaller, $4.15; X L steel shoes, new, light pattern, sizes 1 to 5, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; featherweight, all sizes, 0 to 4, $5.35, toe weight, all sizes, 1 to 4, $6.60. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—These are in moderate request this week. Discounts are as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off, and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—Unchanged. Discounts are as follows: Norway carriage bolts, 55 per cent.; common, 50; full square carriage, 55; machine, 50 and 5; coach screws, 66 2-3; sleighshoe bolts, 65 and 5; blank bolts, 50 and 5; bolt ends, 50 and 5; plough bolts, 50 and 5; tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3½c. per lb. off list; hexagon nuts, 3¾c. per lb. off list.

SCREWS. — In good request. Discounts are: Round head bright, 82½ per cent.; flat head bright, 87½ per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

CORDAGE.—Business is active this week and prices are unchanged. Quotations are: Pure manila, 11½c.; British pure manila, 12c.; sisal, 11½c.; double lathyarn, 11½c.; single lathyarn, 11c.; cotton rope, 16¼c.; cotton twine, 17 and 20c. for 3 and 4 ply.

BINDER TWINE.—Firmly held and in fair request at 10½ to 13c.

BUILDING PAPER.—There is a good business moving in building paper and prices are firmly held. We quote as follows: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 90c. per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll; O K and I X L, 70c. per roll; heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

SHOT.—No change to note this week. Quotations are: Ordinary drop shot, A.A.A. to dust, $6.50 per 100 lb.; chilled, Nos. 1 to 10, $7.00 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount, 15 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

FIREBRICKS.—Firm and in fair demand. We quote: $16 to $22 per 1,000 for English and $17 to $22 for Scotch, as to brand.

CEMENT.—Large volume moving. We quote: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl. ex-store, and American, $2.20 to $2.40 ex-cars.

METALS

The tendency in heavy iron and metals is one of extreme caution with buyers at the present moment, and the main argument with them seems to be the declining tendency of pig iron in the United States. It is just possible, however, that an undue importance may be attached to this feature of the situation, and buyers will do well to bear in mind that very recently the price of pig iron has been out of all proportion to the price of the more finished lines of material, such, for instance, as steel billets, wire rods and other articles. While pig iron was abnormally high, makers of more finished articles found it impossible to get an advance on anything like a parity with the price of pig, so that the decline in it of late will not result in changes in more finished material of a radical nature. In fact, pig is simply approaching a proper relation to other articles in the matter of value.

PIG IRON.—Trade is quiet here and advices from Britain state that prices are evening up. We quote: Carron, No. 1, $21; do., No. 3, $19.75; Middlesboro', No. 3, $17.75; Ayersome, No. 1, $20; do., No. 3, $19.40.

BAR IRON.—There is a fair trade in bar iron and prices here show no change. We quote as follows: Merchants' bar, $2; horseshoe iron, $2.25 and forged iron, $2.30.

BLACK SHEETS.—These are moving out in a steady way this week. We quote: 28 gauge, $2.45; 26 gauge, $2.40; 22 to 24 gauge, $2.35; 18 to 20 gauge, $2.30 and 8 to 10 gauge, $2.40.

GALVANIZED IRON.—There is a satisfactory movement. Quotations are: 28, Queen's Head, $4.40; Apollo, 10¾-oz., $4.30; Fleur-de-Lis, $4.15; Comet, $4; Bell brand, $4.05. In less than case lots, 25c. extra.

LEAD PIPE.—Unchanged, and in fair inquiry. We quote 8c. for composition waste and 7c. for ordinary, with 30 per cent. discount.

IRON PIPE.—Remains unchanged. We quote as follows: Standard pipe, per 100 ft., in lengths under 19 ft.: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85, ¾, $3.65; 1-in., $5.20; 1¼, $7.35; 1½, $8.95; 2-in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.45; ½, $3.85; ¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2-in., 416.85. Extra heavy pipe, plain ends, are quoted per 100 ft. as follows: Black, ½, $4.20; ¾, $5.25; 1-in., $7.55; 1¼, 410.55; 1½, $12.75; 2-in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1-in., $9.55; 1¼, $13.25; 1½, $16; 2-in., $21.90. For threads and couplings on extra heavy

TINPLATE.—Cables state that the demand for wasters on Canadian account has continued active at prices ranging from 11s. 3d. to 15s. 6d., according to size and quantity. Locally prices are unchanged at $1.25 for charcoal and $1 for cokes.

TERNE PLATE. — Remains as last quoted at $7.25.

COIL CHAIN.—Remains quiet. We quote: No. 6, 10c.; No. 5, 9c.; No. 4, 8½c.; No. 3, 7c.; ¼-in., 6½c.; 5-16-in., $4.90; ⅜-in., $4.20; 7-16-in., $4; ½-in., $3.90; 9-16-in., $3.75; ⅝-in., $3.60; ¾-in., $3.50; ⅞-in., $3.45, and 1-in., $3.40, with 10c. allowance on carlots.

CANADA PLATE.—An active trade is doing this week in these. We quote as follows: 2s, $2.60 to $2.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

STEEL.—Quiet, but steady. We quote: Mild, $2.05; sleighshoe, $2.10 to $2.20; tire, $2.15 to $2.25; spring, $2.85 to $3; reeled machinery, $2.75 to $3; toecalk, $2.60 to $2.75; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.50.

TOOL STEEL. — As last reported. We quote: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

INGOT COPPER.—This metal has been irregular lately, fluctuating as 10s. on spots and 15s. on futures. Locally prices continue the same under a quiet trade at $15.50 to $15.75.

INGOT TIN.—This also has been very irregular in its action, especially at Singapore, but locally prices range from $33 to $33.25.

PIG LEAD.—The market holds fairly steady outside and prices here are unchanged at $3.15 to $3.25.

SOLDER.—Continues quiet at 20c. for bar and 19c. for wire.

ZINC SPELTER.—The tendency has been easier outside and local prices had to be adjusted to the change. We quote: $5.75.

SHEET ZINC.—The same remarks apply to this line, which we quote at $6.50 to $6.75.

SCRAP METALS.

These are exceptionally dull, but there are no further changes in prices this week. We quote:- Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $16 to $16.50; No. 2, $7.50 per ton; machinery scrap, $16 to $16.50; stove plate, $13;

ONTARIO MARKETS.

Toronto, June 26, 1903.

HARDWARE.

A CONTINUANCE of the buoyant feeling of last week is manifest. The amount of business doing; the steadiness of prices; the satisfactory manner in which payments are being met, help to maintain a firm tone in commercial circles, while the expected increase in bounties has strengthened the stock market, and through it the industrial circles affected by the recent crisis. While the older Ontario iron industries have not been directly affected by the crisis at Sydney, N.S., there has been a reflex influence. It is with satisfaction, therefore, that the report is received that bounties on iron produced with Canadian coal from imported ore are to be increased. A general firmness prevails, the exception being poultry netting, in which some cutting is being done, though discounts are nominally unchanged. It is stated, however, that some inferior netting is offered for sale. United States manufacturers have advanced the price of alarm tills 20 per cent., and jobbers here are likely to follow suit at once. The discount on "Countersunk" horse nails has been reduced another 2½ per cent., it now being 55 per cent. Other lines are unchanged.

BARB WIRE.—A moderate trade is doing this week. The base price is $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

GALVANIZED WIRE.—There is no change; business quiet. We quote as follows: Nos 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots and at $2.15 in carlots.

SMOOTH STEEL WIRE.—There is still a fair sale. The base price is $2.50 per 100 lb. Oiling 10c.; coppering 60c.; and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

COIL SPRING WIRE.—Not much doing this week. No change in prices. We quote as follows: No. 9, $2.75; No. 11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less. with freight up to 20c. allowed.

WIRE NAILS.—Business active; mills seem about up with orders. We quote: Carlots, $2.40 and small lots, $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

CUT NAILS.—A good business in these keeps up at $2.50 per keg f.o.b. Toronto.

HORSE NAILS.—The market is decidedly strong. The discount on "Countersunk" head is reduced to 55 per cent., another reduction of 2½ per cent. We quote as follows: "C" brand, oval head, 10 and 10 and 7½ per cent.; on "Monarch," 60 per cent., and "Countersunk" head, 55 per cent.; on "Peerless," 15 and 7½ per cent.

HORSESHOES.—A small trade doing. We quote, f.o.b. Toronto: Iron shoes, No 2 and larger, $3.80; No. 1 and smaller $4.05. Steel, new light shoes, No 2 and larger, $3.95; No. 1 and smaller, $4.20. Snow shoes, No. 2 and larger, $4.05; No. 1 and lighter, $4.30. If shipped from factory, 10 to 15c. less.

SCREWS.—A good sorting trade is doing. The shortage is not so pronounced this week. We quote as follows: Flat head bright, 87½ per cent. discount; round head bright, 82½ per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

RIVETS AND BURRS.—In steady demand. We quote: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent

BOLTS AND NUTS.—Many sizes are still short, though stock has been received by some jobbers. We quote as follows: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron, ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.

BINDER TWINE.—The market is in a strong condition, most of the output having been sold and a good demand yet being looked for. Quotations are: 650 ft., 13c.; 600 ft., 12c.; 550 ft., 11¼c.; 500 ft., 10¼c.

CORDAGE.—A good steady trade keeps up in this. We quote as follows: Pure manila, 14½c.; British pure manila, 12c.; sisal, 11½c.; double lathyarn, 11½c.; single lathyarn, 11c.; double shingleyarn, 11½c.; single shingleyarn, 11c.; sashcord, 25 to 30c.

LAWN MOWERS.—There is still a fair demand for these. Prices are steady. We quote: Woodyatt, 12-in., $7.50; 14-in., $8; 16-in., $8.50; 18-in., $9; 20-in., $10; Star, 12-in., $5.50; 14-in., $5.75; 16-in., $6; Daisy, 12-in., $4.90; 14-in., $5.10; 16-in., $5.30; Ontario, 12-in., $14.25; 14-in., $15.80; 16-in., $16.80; 18-in., $18.90; 20-in., $20.50; Philadelphia, 12-in., $6.50; 14-in., $7; 16-in., $7.50. Discount, 40 and 10 to 50 per cent.

SOIL PIPE AND FITTINGS.—Makers have notified the trade that after the end of this year light soil pipe and fittings will not be made. Discounts are: Light soil pipe, 45 and 5 per cent.; light soil pipe fittings, 50 and 5 per cent.; medium and extra heavy pipe and fittings, 55 and 5 per cent.; 7 and 8-in. pipe, 40 and 5 per cent.

BRASS GOODS.—There is an excellent demand for brass goods for waterworks fittings, largely from municipal works.

BUILDING PAPER.—A steady trade is reported in this. We quote as follows: Tarred felt, $1.85 per 100 lb.; 2-ply ready roofing, 95c. per roll; 3-ply, $1.20 per roll; carpet felt, $2.30 per 100 lb.; dry sheathing, 40c. per roll; tar sheathing, 50c. per roll; dry fibre, 50c. per roll; tarred fibre, 65c. per roll, O K and I X L, 70c. per roll, heavy straw and sheathing, $35 per ton; slaters' felt, 65c. per roll.

POULTRY NETTING.—Prices continue nominally at 60 per cent. for 2 in. mesh, 19 w.g.; and 50 per cent. for 2 in. mesh, 16 w.g. There is, however, considerable cutting, orders being taken for next year's business at low prices. Some jobbers state that in some cases in the past netting has been sold at low figures, yet of such inferior quality that it was dear at the price.

SCREEN DOORS.—The wet season last year left a surplus of screen doors; now a continuance of damp, cool weather is again interfering with sales. We quote: Screen doors, common, 2 or 3 panel, walnut stained, 4-in. style, $6.80; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

PLUMBING FIXTURES.—The demand keeps active, and some lines of earthen

ware stocks are light. Prices are steady.

RUBBER HOSE. Rubber prices continue to advance in England, so the feeling keeps firm. Lawn standard is now quoted at 5½c. per ft. for ½ in. and 6½c. per ft. for ¾ in.

FORK HANDLES.—There is a brisk business at the new discount, 50 per cent.

PRESSED SPIKES.—A good demand is reported in these. We quote per cwt. as follows: ¼ in. x 4, 4½-in., $4.75; 5-16 in. x 5, 6 in., $4.50; ⅜-in. x 6, 7, 8 in., $4.25; 7-16 in. x 7, 8-in., $4.10; ½ in. x 9, 10, 12-in., $3.90. The discount is 20 per cent.

TINWARE AND ENAMELWARE.—The demand keeps up excellently, all lines being in demand.

MILK CAN TRIMMINGS.—An excellent trade continues. Prices are unchanged.

CEMENT.—The demand continues active, absorbing all offerings, both of foreign and domestir production. We quote in carlots, Toronto, as follows: Canadian Portland, $2.50; German, $2.40 to $2.50; English, $2.30 to $2.50; hydraulic, $1.50. Small quantities are 15 to 25c. higher.

METALS.

It is a difficult matter to gauge the metal marpet under present conditions Pig iron is still unsettled, for, while consumption is undoubtedly larger than last year—as fully as large as in the earlier part of the year—the makers have yielded material concessions, yet buyers are holding off in hope of more. Tin and copper are fluctuating daily, the market unquestionably being materially affected by manipulators. While the local market does not follow outside fluctuations, it is affected by them, and in the case of pig iron, has followed in the wake of changes in the United States.

PIG IRON.—The market has not yet settled down as the basis of prices for the last half of the year has not been accepted by many buyers, in Canada as well as the United States. The selling agents, on the other hand, seem to be growing in confidence, claiming that the consumption is keeping up at a pace which must consume the output. We quote f.o.b. Toronto, Hamilton and Midland No. 1, $22; Sydney No. 1, $20; No. 1 Jarrow, $21; No. 2 Summerlee, $25.

BAR IRON.—Buying is liberal, the prices being shaded somewhat. The base price is now $2. For extras, cut to length while rolling: 2 ft. and over, 10c per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

STEEL BOILER PLATES.—A steady decrease is reported, the base price keeping firm at $1.96 f.o.b., Toronto.

TOOL STEEL.—There is an excellent demand. Prices are steady. We quote as follows: "B C" and "jBlack Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8 to 9c.; Park's "Silver," 12 to 14c.; Park's "Special," 15 to 20c.

MACHINERY STEEL.—The activity continues, with prices firm at $2 to $2.05 f.o.b. Toronto.

COKE.—In good demand. Quotations range from $6.75 to $7.15 for 72-hr., and $5.50 for 48-hr. furnace coke, f.o.b. Toronto.

BLACK SHEETS. Good sorting trade doing. We quote: Common, $3.15 for 28 gauge and dead flat, $3.50 for 26 gauge.

CANADA PLATES.—Purchases for fall requirements are more numerous. A good import demand is noticed for these. Prices are steady. We quote as follows: All dull, $2.90 to $3; half polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—A strong demand is reported at unchanged prices. We quote as follows: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—The market continues strong. We quote $33 to $33.25.

TINPLATES.—The demand is quiet, the market showing an easy tone in sympathy with weakness in South Wales. We quote: Charcoalsl $4.75 to $5, and cokes, $4.25 to $4.50 per box.

COPPER.—Remains unchanged. An active demand is noted. We quote as follows: Ingot copper, $15, and sheet copper, $21 to $22 per 100 lb.

BRASS.—Unchanged in price and in good demand. Discount, 10 per cent.

LEAD.—Outside markets are much stronger. We quote: $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE.—An excellent trade continues, with prices steady. Our quotations are as follows: Per 100 ft.: Black pipe, ⅛-in., $3.15; ¼-in., $2.40; ⅜-in., $2.65; ½-in., $2.85; ¾-in., $3.65; 1-in., $5.25; 1¼-in., $7.35; 1½-in., $8.95; 2-in., $12.55; 2½-in., $20; 3-in., $23; 3½-in., $30; 4-in., $36.

ZINC SPELTEU.—The market is firm at 6¼ to 6½c. per lb.

ZINC SHEETS.—We quote base price as follows: Cask lots, $6.75 to $7, and part casks, $7 to $7.25.

SOLDER.—In good demand. Prices are unchanged. Guaranteed half-and-half is quoted at 18 to 19c., and wiping 17 to 18c.

HIDES, SKINS AND WOOL.

Ther? is no great change on this market since last week, except that sheepskins are off the market now; lambskins and pelts are taking the place of the sheepskins. The hide market continues firm and active. The calfskin market is still rather weak. Things are not moving so well on the wool market as was expected. We quote as follows:

HIDES.—No. 1 green, 8c.; No. 2 green, 7c. per lb.; No. 1 green, steers, 8½c.; No. 2 green, steers, 7½c. per lb.; cured, per lb., 8 to 8½c.

CALFSKINS.—Veal skins, No. 1, 6 to 14 lb. inclusive, 9c.; No. 2, 7c.; No. 1, 15 to 20 lb. inclusive, 8c.; No. 2, 6c. Deacons (dairies), each, 60 to 70c. Lamb skins, each 25 to 30c.; pelts, each, 20 to 25c.

WOOL.—Unwashed wool, per lb., 8 to 9c.; fleece wool, 14½ to 15½c.; pulled wools, super, per lb., 15c.; extra, 18c.

TALLOW.—We quote 5 to 5¼c. per lb.

OLD MATERIAL.

This market is in much the same condition as last week. The demand for old metals is fair. Prices hold quite firm at last week's quotations. We quote: Heavy copper and wire, 11½c per lb.; light copper, 10c per lb.; heavy red brass 10½c per lb.; heavy yellow brass, 8½c

BRITISH COLUMBIA MARKETS.

Vancouver, June 19, 1903.

TRANSPORTATION problems in different phases are interesting the wholesale hardware trade, as others here. At the meeting of the Vancouver Board of Trade the question of freight rates to a common point, preferably Calgary, were discussed. The same question was the subject of interest at a meeting of the joint committee of the Board and the Wholesale Grocers' Exchange. The chairman of the joint committee reported to the Board of Trade that a meeting with Mr. G. M. Bosworth, fourth vice-president and general traffic manager of the C.P.R., had been arranged for Saturday, June 20. The committee has been gathering facts and figures, and the chairman, in the course of his remarks, stated that they had accumulated plenty of evidence in favor of their contention that there should be a dividing line, some common point to which all rates from, say, Winnipeg on the east and Vancouver on the west, should be equal. This is the whole matter in a nutshell. The merchants have been contending all along that this common point should be Calgary on the main line and MacLeod on the Crow's Nest line. Had they the same rate to Calgary as to Winnipeg they could extend their operations very materially. The distance of the two points from Calgary is about the same.

* * *

The hardware trade has been possibly the most seriously affected by the existing schedule of rates, which the wholesale men are attempting to prove has discriminated against Coast wholesale merchants. They have practically been shut out of the Kootenay and eastern British Columbia trade in many lines through the rates.

* * *

The chairman of the joint committee referred to, stated to the Board of Trade during his remarks, that he understood the C.P.R. had been discriminating by way of special rates to Dawson in favor of eastern merchants. This would be, under present existing circumstances, a great hardship if allowed to go on. It would take away from them the one good field which they had been able to get into on a fair basis.

* * *

The other transportation problem referred to is the difficulty of getting goods forward. This has been the experience of nearly every one in the trade, judging from their remarks. "We could give you some news of movement in hardware," say they, "if stocks would come forward when they are expected. Transportation is a serious problem which is seriously affecting the conditions here. The transportation facilities certainly require very great improvement."

* * *

Northern shipments of hardware, largely mining supplies, have been heavy for the past few weeks, and the opening of the Yukon for summer traffic will greatly increase the quantity of goods sent north.

* * *

"We shipped, among other goods the other day, a single order of 200 doz. shovels to the north, said one of the brightest hardwaremen in the country yesterday. "Were they Canadian manufacture? No indeed. The trade there will have nothing but the American article. The reason for this is that our Canadian manufacturers do not seem to get on to the spring point shovel. I actually sent samples to eastern Canada to give the manufacturers a chance to secure the business. But the results were not satisfactory. They have yet to learn how to make this particular line, so important to the miner." This merchant stated that he had placed an order in the U.S. for 400 dozen shovels of American make, simply because he could not get the article the demand required.

* * *

As a rule English pale boiled linseed oil is a plentiful article in this market. This year it is not because of price. The price of the English goods laid down here is such that the Canadian article can compete successfully at present prices. The risk is less on the domestic oil, as the loss from leakage in coming round the Horn is a considerable percentage. Price

of this staple on this market is steady and has remained firm for some months.

* * *

There has been a slight advance of ½c per pound in rope prices on this market within the past few days.

* * *

Two cargo vessels from British ports arrived at Vancouver this week with general merchandise forming a considerable portion of the cargoes. Following is a summary of the manifest of each vessel: Ex. S.S. Ajax. of the China Mutual line, from Liverpool; 7,500 bbl. Portland cement, 904 rails, 36 bunches of fish plate, 1 case bolts, 1,251 bbl. fireclay, large quantity fire-brick, part for backs and arches of coke ovens, 19 anvils, 25 cases sheet iron, 150 bdls. galvanized iron, sheets, 35 bdles. bar iron, 363 bars of iron, 3 casks of bitumastic solution, 22 cases galvanized sheets, 119 Planet steel sheets, 57 bdles. hoops, 365 bars iron, 17 bdles. bar iron, 24 anchors, several hundred tons of tin and pig iron. Ex. British ship Lamorna, from Glasgow: 101 cases lead shot, 10 cases safety cartridges, 1017 boxes Canada plate, 202 bdles. flat strap iron, 195,000 Gartcraig fire-bricks; 1,609 casks of fire-clay, 95,000 Glentarg, 399 cases glass, 10 casks sheet zinc, 19 rolls sheet lead, 360 casks fire-clay, 25 tons Eglinton pig iron, 250 tons Summerlees pig iron, 450 cases safety cartridges, 38 cases empty cartridges, 55,000 fire-brick, 100 bbls. fire-clay, 873 bars iron, 160 steel plates.

Geo. S. B. Perry.

MANITOBA MARKETS.

Winnipeg, June 22, 1903.

THE week has been marked with a general advance in the price of wooden handles of all kinds in sympathy with the advance by American manufacturers. Large quantities of both American and Canadian handles are sold on this market, possibly the sale of American being in the lead. The only other important change of the week is the decline in the price of turpentine of 5c per gallon, in barrel lots. This decline was looked for. Trade is steady and satisfactory in all lines.

NOTES.

Turnbull & McManus, one of the oldest sash and door factories in the west, have purchased the old Citizens' rink, a large property east of Main street and north of the C.P.R. tracks, and will erect a large track warehouse upon the site.

T. B. Williams, of Eden, has sold out his general stock to Kerr & Graham, and for the future will confine his attention to hardware exclusively.

E. C. Irwin & Son, of Miami, have purchased the hardware business of C. B. Armitage, of Glenboro.

NOVA SCOTIA MARKETS.

Halifax, June 23, 1903.

BUSINESS in hardware is usually dull at this season of the year, and last week the volume of business coming in was not very large, but it was up to the average of former years and the dealers generally are fairly well satisfied. Favorable reports of the amount of retail business being done throughout the province are coming in, but though the June collections were slightly better than in May they are not as full as in previous years at the same period. Generally in May and June money is quite plentiful throughout the country, but this is not so at present. The banks also appear to be doing a very conservative business. The outlook for summer business in this regard is more hopeful than a month ago and may gradually improve.

* * *

The retail trade of the city continues fairly good, a large number of seasonable goods for house cleaning and repairing being worked off. Now that warm weather has come screen doors and windows, which in other seasons were up a month ago, are now in demand, and the price, as previously noted, is somewhat advanced.

* * *

The general price list remains almost unchanged except for an easier feeling in zinc and zinc products. There has also been a reduction in some kinds of sheathing paper. The demand for builders' materials still continues, as building operations are being largely carried on in almost every part of the province. The retail trade has also been doing a good volume of business in these lines. The city building operations this season are very extensive and a heavy local trade is the result.

* * *

Last week a number of the Bank fleet were in port refitting for the summer fishing, and quite a trade in cordage, lines and canvas was done. The amount of trade from each, however, was small, as the bulk of the outfitting is done earlier in the season and now it is only a matter of repairs and slight renewals.

* * *

Though the iron and steel situation may be considered much easier, and manufacturers should be able to produce their goods somewhat cheaper, it is not expected that much decline will take place for some time. Manufacturers are so heavily booked with orders that they can afford to hold the prices as at present. Jobbers still complain of being unable to have orders filled in many lines unless ordered many months in advance, which is, in many cases, an impossibility.

R.C.H.

A UNITED STATES OPINION.

THE opinion of such a United States authority on "Canada's Metal Problem" as The Iron and Machinery World is interesting, as indicative of the viewpoint from which the problem is seen in that market. "Within the past few weeks the question of increasing the duties on the imports of iron and steel products in Canada has reached an acute stage. The Canadian Government has been importuned to increase the protection of the products of the mills in the Dominion, especially against the importations of the metal from the United States. Within the past year or two there has been in Canada an expansion of its metal producing capacities such as it has never seen before and one or two of the producing companies have lately suffered a severe collapse in the market values of their securities, thus perhaps increasing the pressure upon the Legislature to save those corporations by barring out importations.

"The gains of furnaces and mills of the United States have in recent years found in Canada one of their most progressive and capacious patrons. This trade has suffered some decline during the past year on account of the tremendous home demand, but when the careening market once rights itself, as it now promises to do in the near future, the metal producers on this side of the imaginary line of demarcation will be in a position to resume active business relations with their quondam patrons. The issue therefore possesses interest south as well as north of the border.

"One of the most significant developments of industry in the past several years has been the extent to which Canada has been Americanized by the establishment there of the branch plants of United States manufacturers. The solution of this problem may be attained in the same manner. Looking exclusively to history for light, there is hardly a basis for reaching any other conclusion. There are special and weighty geographical reasons why the iron and steel industries of this country and of the Dominion of Canada should be intimately blended. An American agricultural implement maker would establish a branch factory in Canada simply to obtain that market. There would be no especial considerations. But in the crude iron and steel industry a different state of facts exists. The rich sources of ore supplies lie on the border land, and there is likely to be important discovery of new mines on the north as on the south of the line. The path of freightage between mine and furnace lies on the magnificent lakes, common heritage of the two nations. Walls could not be built high enough to cleave these mutual interests. One of the inevitable effects of radical changes in the tariff laws of Canada would be to domesticate American producers on the other side. It is not certain that this would not prove advantageous to Canada materially. It is certain that it would tend to unify the two peoples."

NO INCREASE IN STEEL DUTIES.

The Montreal Star published a statement from the directors of The Dominion Iron and Steel Co., Ltd., stating that as a result of their recent interviews with the Government, the Premier, Sir Wilfrid Laurier, and the Finance Minister, Hon. W. S. Fielding had announced their decision not to make any change or addition to the existing tariff during the present session. An extension would be made of the bounties, and there would be an increase to make the same apply to steel manufactured from ore taken from Canadian soil as well as that brought into the country.

Mr. H. J. Fuller, of The Fairbanks Co., Montreal, was in Toronto for a couple of days this week on his way to his summer residence on Lake Erie.

PAINT, OIL AND BRUSH TRADES

EXTENDING THEIR MANUFACTURING FACILITIES.

THE engineers of The Canada Paint Co. are now engaged in drawing up plans for their extension on Hunter street, Montreal. The gratifying increase of business which has come to this company necessitates larger premises than those occupied at present.

The Canada Paint Co. has purchased a tract of land on Hunter street, bounded by Chatham street and Notre Dame lane, which has the merit of being central and close to their present extensive plant on William street, Montreal.

The Canada Paint Co., Limited, is the largest paint and varnish manufacturing company in the Dominion of Canada and the only company in Canada who ship large quantities of painting material to the United States, in spite of the high tariff which our American friends have against us. Shipments are also made to Great Britain and to the Australian colonies.

For some time it has been difficult for this company to take care of all the business which is offered, and now the directors feel warranted in doubling the color-making capacity and enlarging in all departments.

The Canada Paint Co., Limited, employ their own engineers, electricians, carpenters and machinists, and the new works will be erected under the supervision of their permanent staff and will be one of the most complete yet devised on this continent.

CANADIAN COLORS PREFERRED.

Amongst a few (fortunately a very few) people in this country it is the fashion to imagine than anything which comes from abroad and has been mulcted with a duty must be better than what can be made and obtained at home. "Search the world for brains, but preferably use the home product" should be the cry for those who wish to build up the country.

In decorating the most palatial building in Canada, and possibly the finest banking house in the world, viz., the new Bank of Montreal, in Montreal, no expense was spared to get the finest paints that artistic intelligence and money would procure.

The ceiling and general "motif" is a triumph of the decorator's art, a creamy white, light blue and dull gold blending in a delightful phantasy of color and form.

The paints are manufactured by The Canada Paint Co., Limited, of Montreal and Toronto, and comprise their regular stock. For strength and fineness it is asserted emphatically that there are no better colors manufactured anywhere.

MR. WALTER H. COTTINGHAM ADVANCED.

WALTER H. COTTINGHAM, general manager of The Sherwin-Williams Co., Cleveland, has been appointed 2nd vice president of the company, in succession to the late E. P. Williams, who died last May.

Mr. Cottingham's remarkable progress is well known to readers of "Hardware and Metal," yet is worthy of the attention of all young men. He is a Canadian, and for several years carried on a paint and varnish business in Montreal, his success winning wide attention. One of the best moves in his successful career was his acceptance of the Canadian agency of The Sherwin-Williams Co., which he carried on with such enterprise and good results, that in 1898 he was chosen from the great number of agents and representatives of that company to fill the responsible position of general manager.

Walter H. Cottingham.

Of the good work he has done and is still doing in this capacity nothing need be said, further than to refer to the reports of the remarkable expansion of the company's business during the five years of his management.

Possibly no better criterion of the spirit which has dominated Mr. Cottingham's career and which has contributed so much to his success could be furnished than by the reproduction of an article, written by himself some weeks ago, and which was published in The S.-W. P., a magazine published by the company for the use of their agents:

GET OUT AND HUSTLE.

That's the way to get business; that's the way to build up trade and overcome competition. "Keep everlastingly at it" is a motto that every ambitious business man should adopt and practice. Genius is all right, but there's mighty little of it in this world; plain ordinary "hustling" is what counts in the struggle for business supremacy.

The laurel wreath of trade is won by the man with the capacity to do things and keep on doing them—the man of ideas, purpose and action.

No one with good health and ambition should despair of success; everything is open to him if he will but hustle hard enough and long enough. Work on and work ever; keep up your enthusiasm and your nerve, and you're bound to make headway. Progress is inspiring. There's nothing like a little success to convince a man of his own power and ability. Confidence is a great factor in achievement.

The time to hustle is when there is something to hustle for. That time is here—the great spring time, when all the world is filled with new life, new energy and new opportunities; when nature, refreshed by her winter's slumbers, rises with new vigor to the task of replenishing the earth with her great bounty, and providing new openings for man's activity. Surely it is the season when the best that's in us is called forth. It is the time when we should be stirred by new hopes to greater effort. It is the time when work is the most productive because it's the season when requirements are greatest.

Are you going to make the most or it? Are you going to use the opportunities of this spring-time to lift yourself higher up in the world? If you are, get out and hustle, early and late—it's the only way.

CLOSING AT 5 O'CLOCK.

Among the Toronto firms closing at five o'clock during the summer months are Stewart & Wood, wholesale paint, oil and glass dealers, and The United Factories, Limited, wholesale brush and woodenware dealers, York street.

PAINT AND OIL MARKETS.

MONTREAL.

THE only change in price has been a rather firmer feeling in turpentine. The rainy weather of the past week has had a striking influence in creating an active demand for Paris green, the inquiry for which so far this spring was very dull. Stocks of it now are rapidly thinning out, and the expectations of a tame

An Ounce of Fact is Better

than a pound of assertion. One fact that we dwell upon at all times regarding Lucas Imperial French Green is that it is non-poisonous. A small but **important** fact.

A few other proven facts are that it is not surpassed for brilliancy of hue, body and color strength, fineness and staining qualities. When analyzed along with many others, at the request of the St. Louis Association of Painters, it was found to be the strongest and best green of all that were examined. A very important fact. Send for sample card showing shades and let us quote prices. Dry and in Oil.

Beware of counterfeits. None genuine without the Lucas Brand stamped in head of every package.

JOHN LUCAS & CO.

Paint, Varnish and Color Manufacturers

NEW YORK ***PHILADELPHIA*** *CHICAGO*

The Lucas line of **DRY COLORS** is the largest in the country. Originators of the famous Lucas Greens.

[illegible] a [illegible] of dry weather have [illegible]. In fact, during the past [illegible] have been overwhelmed with [illegible], and the material is going out with a rush. White lead is also in active enquiry, and quotations are firm. The same can be said of liquid paints, and a healthy tone prevails in the whole paint and oil branch of the hardware trade in Montreal.

GROUND WHITE LEAD.—Best brands, Government standard, \$5 to \$5.25; No. 1, \$4.57½ to \$4.87½; No. 2, \$4.40 to \$4.50; No. 3, \$4.02½ to \$4.12½; No. 4, \$3.65 to \$3.75, all f.o.b. Montreal. Terms, four months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—\$4.75 in casks and in kegs, \$5.

DRY WHITE ZINC.—Pure dry, in casks, 6½c.; in 100-lb. kegs, 6¾c.; No. 1, zinc, in casks, 5½c.; in 100-lb. kegs, 5¾c.

WHITE ZINC (ground in oil)—Pure, 25 lb. irons, 8c.; No. 1, 7c.; No. 2, 6c.

PUTTY.—We quote: Bulk, in barrels, \$1.60; bulk, in 100-lb. packages, \$1.85; bladders, in barrels, \$1.90.

ORANGE MINERAL.—Casks, 7c.; 100-lb. kegs, 7½c.; smaller quantities, 8¼c.

RED LEAD.—Genuine red lead, in casks, \$4.50; in 100-lb. kegs, \$4.75; in less quantities, \$5.75 per 100 lb. No. 1 red lead, casks, \$4.25; kegs, \$4.50 and smaller quantities, \$5.50.

LITHARGE.—Ground casks, 5c.; in less quantities, 5½c.; flake litharge, casks, \$5.25; smalls, \$5.75 per 100 lb.

LINSEED OIL.—Raw, 1 to 4 bbls., 57c.; boiled, 60c.; raw, 5 to 9 bbls., 56c.; boiled, 59c. Terms, net cash in 30 days. Delivered in Ontario, between Montreal and Oshawa, at 2c. per gallon advance.

TURPENTINE.—Single bbls., 75c.; 2 to 4 bbls., 74c. Terms, net cash in 30 days.

BENZINE.—25 to 26c.

SHELLAC VARNISH.—Pure white, \$2.20 to \$2.35; orange, \$2.10 to \$2.25.

MIXED PAINTS.—\$1.20 to \$1.40 per gallon.

CASTOR OIL.—8¾ to 9¼c. in wholesale lots, and ½c. additional for small lots.

SEAL OIL.—48 to 50c.

COD OIL.—35 to 37½c.

PURE CANADIAN PARIS GREEN.—Petroleum barrels, 15¼c. per lb.; arsenic kegs, 15½c.; 50 and 100-lb. drums, 16c.; 25-lb. drums, 16½c.; 1-lb. packages, 17c.; ½-lb. packages, 19c.; 1-lb. tins, 18c.; ½-lb. tins, 20c.

PURE ENGLISH PARIS GREEN.—Petroleum barrels, 14½c.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. paper boxes, 16c.; 1-lb. tins, 17c.

TORONTO.

MARKET conditions are practically unchanged from last week. The demand for sundries keeps brisk. Both linseed oil and turpentine are higher in the United States and are firm here.

WHITE LEAD.—Ex-Toronto, pure white lead, \$5.10 to \$5.25. No. 1, \$4.62½ to \$4.87½; No. 2, \$4.25 to \$4.50; No. 3, \$3.87½ to \$4.12½; No. 4, \$3.50 to \$3.75 in packages of 25 lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, \$5.02½.

RED LEAD.—Genuine, in casks of 560 lb., \$4.75 to \$5; ditto, in kegs of 100 lb., \$5.25 to \$5.50; No. 1, in casks of 560 lb., \$4 to \$4.25; ditto, in kegs of 100 lb., \$4.25 to \$4.50.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, \$6 to \$6.25; Lehigh, in casks, \$6 to \$6.25.

SHINGLE STAIN.—In five-gallon lots, 60 to 85c. per gallon.

PARIS WHITE.—90c. to \$1 per 100 lb.

WHITING.—65c. per 100 lb; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c per lb.

LIQUID SHELLAC.—Pure orange, in bbls., \$2.30 to \$2.40; white, \$2.35 to \$2.45 per gallon; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8 to 8½c. per lb.; cabinet glue, in bbls., 11½ to 12c.; emery glue, in bbls., 17c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, \$2.10; bladders, in 100-lb. kegs, \$2.25; bulk in barrels, \$1.80; bulk, less than barrels, and up to 100 lb., \$2.05; bladders, bulk or tins, less than 100 lb., \$2.75.

PARIS GREEN.—Petroleum bbls., 13 to 15½c. per lb.; arsenic kegs, 13½ to 15½c.; 50 and 100-lb. drums, 14 to 16c.; 25-lb. drums, 14½ to 16½c.; 1-lb. packages 15½ to 17c.; ½-lb. packages, 17 to 18c.; 1-lb. tins, 16 to 18c.; ½ lb. tins, 17 to 19c.

PLASTER PARIS.—New Brunswick, \$2 per barrel.

PUMICE STONE.—Powdered, \$2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, \$1.20 to \$1.40 per gallon; No. 1, \$1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 8 to 9c. per lb.; and 9 to 10c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single barrels, 74c; 2 to 3 bbls., 73c delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

WINDOW GLASS.

MONTREAL.

There is little activity to note in this line this week. We quote as follows: First break, 50 ft., \$2; second, \$2.10 for 50 ft.; first break, 100 ft., \$3.80; second

"The Lord Loveth a Cheerful Liar"

That's what we have heard some people say! If it be true, we have no hesitation in saying that there is a man in St. John, N. B., whom the Lord ought to love a great deal, if we are to judge by the cheerful way in which he has been lying about our "C" horse nails.

This man and "cheerful liar" has been getting some "pictures took" to show what a real nice nail he was making, and what a "nasty bad nail" the "C" was. This cheerful liar had the artist draw a nail that looks like the horn in "the cow with the crumpled horn." This "cheerful liar" says in the circular in which these made-to-order pictures appear: "These have both been driven under exactly same conditions and bent for clinching," etc. The inference is that the nails illustrated have been driven into a hoof. His nail is straight as an arrow and nicely bent. Our "C" is crooked as a dog's hind leg, and badly bent. But this "cheerful liar" went a little too far. For how under the sun, you could drive nails into a hoof and again extract them for the purpose of illustrating, "beats the Dutch." He must have been lying!

What did Bret Harte say about the Heathen Chinee? His smile so bland, etc.

Well, it's too bad, we are not it — the poor old "C" nail that has weathered the storms of 38 years will have to take a back seat. That is, if business to be successful requires a champion liar. We don't keep any.

He lives at St. John. Do you know him?

Canada Horse Nail Company,

MONTREAL.

break, $4; third break, $4.50; fourth break, $4.75.

TORONTO.

There is an excellent stock demand and import orders are about all in. We quote as follows: Star, under 26 in., $3.80; 26 to 40 in., $4; 41 to 50 in., $4.50; 51 to 60 in., $4.75; 61 to 70 in., $5; 71 to 80 in., $5.50. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days.

PAINT AND OIL NOTES.

Edward Hull, of The Crown Oil Co., Hamilton, Ont., is making a business tour of the province in an automobile.

J. M. Sparrow, president of The Imperial Varnish and Color Co., Limited, reports that their sales of "Elastilite" varnish, "Chijah" floor lac, "Maple Leaf" varnish stain and "Granatine" have largely increased, and that the outlook was never brighter. T. F. Monypenny, vice-president and sales manager, is at present absent on a business trip. The company has recently greatly enlarged and improved its factory.

Work on the new Wm. Buck Stove Works is going ahead rapidly. The walls for the addition are nearly completed and the rest of the work will be rushed on as quickly as possible. It is the intention if possible to take possession in the fall.—Brantford, Ont., Courier.

Thomas Irwin & Son, galvanized iron workers, Hamilton, Ont., are increasing their plant.

R. E. White, 614 Yonge street, Toronto, has begun the manufacture of shipping cans for oils, paints, varnishes, etc., in all sizes, and has already established a creditable connection with local shippers. Mr. White is undertaking the business on a large scale and expects shortly to solicit business from the entire country.

The City Council of Fredericton, N.B., at a recent meeting, decided to install an electric light plant and have it operated by the municipality.

DRY DOCK FOR VANCOUVER.

The Vancouver Dry Dock and Shipbuilding Co. have been incorporated at Vancouver, B.C., with a capitalization of $500,000, for the purpose of building and equipping a dry dock, probably a floating one, in the waters contiguous to the port of Vancouver, most probably on Burrard Inlet, and also to carry on and perform such business as necessarily falls within the province of a dry dock and ship-building company. The provisional directors are Nicholas Thompson, William McCulloch, T. W. Smirl, W. V. Radley and A. Muir.

ADDRESS

THE CANADA PAINT COMPANY LTD

STEEL RAIL PRICES FOR 1904.

Mr. Elbert H. Gary, chairman of the Executive Committee of the United States Steel Corporation, issued the following statement in regard to the steel and iron schedule for 1904, on Saturday last:

"The price of steel rails for the year 1904 had been fixed at $28, at the mill, the price which has obtained during the last three years. As the full capacity of all the mills for the next seven or eight months has been sold, many of the leading railway companies have expresssd a desire to have the price of rails established for next season and action has been taken a little earlier than usual. Upwards of 2[illegible],000 tons for 1904 have already been booked; and inquiries for a large additional tonnage have been received during the day. No change in the price of other lines of steel has been contemplated."

PERSONAL MENTION.

Mr. J. H. Herrick, superintendent of The McClary Manufacturing Co.'s London works, was in Toronto on business on Thursday. He leaves next week for a visit to Albany, N.Y.

Mr. R. A. Baines, of Baines & Peckover, Toronto, has returned from a trip in the eastern and northern states in the interest of companies represented by him. Mr. Baines found all through the territory he covered a notable increase in knowledge of and interest in Canada; also a widespread belief that reciprocity with Canada would be good for the United States.

Mr. Alfred Rubbra, recently manager of The Laurie Engine Co.'s Machinery and Supply Department, Montreal, intends to start in business for himself, and will represent H. W. Petrie in Montreal.

SCARCITY OF BOLTS.

A feature of the market situation which is troubling several manufacturers, is the scarcity of many sizes of bolts. In fact, the shortage has become so pronounced that at least two of the largest bolt works are refusing to accept orders for delivery within six weeks. This situation appears all the more remarkable when it is remembered that such a condition, an acute shortage of bolts, has not been reported on the Canadian market for a score of years.

Hamilton & Stott, St. Thomas, Ont., have received the contract for installing their system of hot water heating in Lawyer Meehan's residence.

CHAT

MONTREAL is considering the proposition of putting all its wires under ground. For some time the great number of wires overhead throughout the city has been a great nuisance. It was decided that the different companies owning the wires should appoint an expert who would act in conjunction with the one appointed by the city in preparing plans and making estimates for a common conduit system for such streets as should be designated.

What is known as The Employers' Protective Association, a body composed of employers of labor of all classes and variety, has been organized in Vancouver, B. C.

A few days ago the first really elaborate motor car made its appearance on the streets of Vancouver, B.C. The new arrival is one of the very latest "Rambler" touring cars, and was purchased from The Canada Cycle and Motor Co., Limited, Toronto.

The well-known hardware firm of Morton & Christie, Windsor, Ont., which has been owned and conducted by Robert Morton for the past two years, has been sold to Wm. J. Douglass, Windsor. Mr. Douglass, the new proprietor, is one of Windsor's progressive young business men, having been connected for some time with the business he has just purchased.

Rogers & Nicoll, hardware dealers, Perth, Ont., have secured the agency for Canada of a jointed ladder fire-escape, which has won an enviable reputation in both the United States and Canada.

John Radigan & Co., of Hamilton, Ont., are placing on the market an assortment of grist mill and elevator cups.

F. Hamilton, 65 King street east, Hamilton, Ont., is introducing to the trade an ingenious calf feeder, of which he has the Canadian rights.

BUSINESS CHANGES.

ONTARIO.

Canada Felting Company, Limited, St. Jacobs, have obtained a charter.

Hermina Mining Co., Limited, Sault Ste. Marie, have obtained a charter.

Goodfellow & Howson, sawmillers, Elmwood, have sold out to John H. Dirstein.

Morton & Christie, hardware merchants, Windsor, are about to sell out to W. J. Douglas.

Charles Emke, sawmiller, Elmwood, has sold out to Henry Ruppenthal.

A. D. Ellis & Company, hardware merchants, Simcoe, have sold out to Charles E. Boyd.

Algoma Builders' Supplies Company, Limited, Port Arthur, have obtained a charter.

The stock of R. H. Hannah, hardware merchant, London, has been sold to Robert Parsons at 60c. on the dollar.

Frenette & Rioux, lumber merchants, Sudbury, have assigned to J. A. Mulligan; meeting of the creditors was held on June 22.

QUEBEC.

The assets of the business of Joseph Dallaire, plumber, Sorel, have been sold.

Wilfred Lacroix & Co., manufacturers of gasoliers, have dissolved; there will be a new registration.

Charles A. Paquet Company, Limited, hardware merchants, Quebec, have offered to compromise at 50c. on the dollar.

BRITISH COLUMBIA.

C. S. Ryder, hardware merchant, Ladysmith, is offering to compromise.

Joseph and Peter Genelle and J. G. Billings have registered proprietors of The Kootenay Lumber Company.

WILL ERECT NEW STORE.

J. G. Kingsborough, general hardware dealer, Ontario, has found it advisable, owing to the expansion of trade, to erect new premises. His new store will be 100 x 30 ft., and will be in every respect an improvement on his present premises.

A COLONY FOR NEW BRUNSWICK.

About 100 families will leave Boston this week for Sunbury County, N.B., to settle about a valuable coal area that has recently come into the possession of The Canadian Mining & Land Construction Co., of which E. L. Parsons and L. L. Fobes, of Boston, are leading officials. The people who go from Boston will be afforded employment in the coal fields and at work of constructing The New Brunswick Coal & Railway Co.'s road.

Messrs. Parsons and Fobes have just returned from New Brunswick, where they have been interviewing the New Brunswick Legislature. On returning they said they had already selected the families who will go first to the new settlement. They have also completed arrangements for the establishment of a cold storage plant at St. John, N.B., by The Hacket Cold Storage Co., of Boston, and have been granted one of the best sites in the city for this purpose.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion, cash in advance. Letters, figures, and abbreviations each count as one word in estimating cost.

HEATING AND PLUMBING

BROOKLYN'S NEW PLUMBING REGULATIONS.

SUPERINTENDENT William M. Calder, of the Building Department of the Borough of Brooklyn, N.Y., has prepared amendments to the plumbing rules and regulations of that municipality. They require the filing of plans whenever gas-piping is to be laid or remodelled, and also prescribe the size of pipe to be used, the character of the material and the manner in which the work shall be done and tested.

A few of the amendments are as follows:

"Before the construction or alteration of any gas-piping, or gas fixture, in any building, or part of any building, a permit must be obtained from the Superintendent of Buildings. This permit will be issued only to a registered plumber; the application must be accompanied by a complete plan of all the floors, showing each outlet and the number of burners to go on each outlet; no pipe allowed of less than $\frac{3}{8}$ in. diameter, and must be of the kind classed as standard pipe, and shall weigh, according to the size, from 0.56 pound per foot for $\frac{3}{8}$ in. up to 10.66 pounds per foot for 4-in. All fittings excepting stop cocks or valves shall be of malleable iron. In no case will iron cocks or valves be permitted.

Where it is possible, all risers shall be left not more than 5 feet from front wall. No pipe shall be laid so as to support any weight, except fixtures, or be subject to any strain whatsoever; and shall be properly laid and fastened to prevent becoming trapped, and shall be laid above timbers, or beams, instead of beneath them; when running lines or branches across beams they must do so within 36-in. of the end of the beams, and in no case shall the pipes be let into the beams more than 2-in. in depth. Pipes that are exposed to cold or dampness shall be properly dripped and must have two coats of paint of red lead and boiled oil, or tarred.

Drops and outlets less than $\frac{3}{8}$ in. in diameter shall not be left more than 1-in. below plastering, centre pieces or wood work. No unions or running threads will be permitted. When it is necessary to cut out any pipe for repairs or other purpose, connection must be made by right and left couplings. Gas outlets for burners must not be placed back of doors or within 1 feet of any meter.

All buildings shall be piped according to the following scale:

$\frac{3}{8}$ in. pipe	26-ft. run	3 burners	
$\frac{1}{2}$-in. "	36-ft. "	6	"
$\frac{3}{4}$-in. "	60-ft. "	20	"
1-in. "	80-ft. "	35	"
$1\frac{1}{4}$-in. "	110-ft. "	60	"
$1\frac{1}{2}$ in. "	150-ft. "	100	"
2-in. "	200-ft. "	200	"
$2\frac{1}{2}$-in. "	300-ft. "	300	"
3-in "	450-ft. "	450	"
$3\frac{1}{2}$-in. "	500-ft. "	600	"
4-in. "	600-ft. "	750	"

Outlets for gas ranges shall have a diameter not less than required for six burners, and all gas ranges and heaters shall have a straightway cock on service pipe. After all piping is fitted and fastened, all outlets capped up, and before any of it is covered in, there must be applied by the plumber, in the presence of an inspector of the Bureau of Buildings, a test with air at a pressure equal to a column of mercury 6-in. in height and the same to stand for five minutes; only a mercury gauge shall be used.

After the gas fixtures and brackets have been placed, another test is to be made, and a final approval card issued by the Superintendent of Buildings. No meter shall be attached until the gas company have been shown certificate that the piping and fixtures comply with the rules."

While the rules and amendments enacted are rather of a stringent nature and will call for quite a few exceptions, in the main they are but right and just. A regular plumber will not object to the stringency of such rules. There has been a lot of work done that should not be used. Many persons who can only cut and thread a piece of pipe imagine they can do gas-fitting. There is not enough care taken in putting in drops or outlets. The Board of Fire Underwriters have made a rule that all outlets where combination fixtures are used must not be more than about 2 in. below the ceiling or centre piece. This is a source of great inconvenience and annoyance to the party who is called in to install the fixtures. Jobs that have been tested and found tight are often made to leak in disarranging these drips and outlets to have them comply with the requirements. Consumers are safe guarded in Toronto by the gas company refusing to connect meters where there is any sign of leak, either in the pipes or fixtures.

TORONTO MASTER PLUMBERS' ASSOCIATION.

A well-attended meeting of the association was held on Monday evening last. Some important matters were dealt with, several suggested changes by the Executive Committee being discussed and adopted. The secretary was instructed to communicate with the Hamilton association in reference to appointing a committee to arrange for a joint picnic between the two associations, and also issue a challenge to play a game of baseball. The selection of delegates to attend the National Convention in Montreal next week resulted in the following being chosen: R. Ross, president; Geo. Cooper, Frank Maxwell and F. Armstrong. It is expected that the following members of the association will also attend the convention: Wm. Mansell, president; J. H. Wilson, treasurer; and L. Le Grow, secretary of the Ontario Provincial, also W. H. Meredith, Ontario provincial vice-president of the National Association.

THE NATIONAL CONVENTION.

From all reports the annual convention of the National Master Plumbers' and Steam Fitters' Association, which is to be held in Montreal next week, will be a success. It is expected that most of the local associations will be represented. President Frank Powers, of Lunenburg, N.S., is anxious that the convention should be the banner convention, and to accomplish this an urgent request is extended to all to attend the sessions. There is no doubt that the delegates will be well looked after by the Montreal association. It was in Montreal seven years ago that the National Association was brought into existence. Once since then, the session of 1900, the convention has met in that city. Greet your president with a large attendance.

A FOUNDRY THAT HAS GROWN.

The Toronto Foundry Co., of Toronto, are to be congratulated on the success that they have achieved since the organization of the company. The firm have just issued a very attractive wall hanger showing the premises occupied by them in 1891, on Niagara street, and the present commodious office and factory they now occupy. The building takes up an entire block, extending along Jefferson

VARN-OFF

A NEW LINE FOR THE PAINT AND OIL TRADE.

Varn-off takes varnish off, and it takes paint off, and it does it all so quickly and with so little trouble that everybody is surprised. It's a line for every paint trade because it is always wanted; and if you have it you have something that pays you. We will mail you a sample for the asking.

TORONTO ASSOCIATION BASEBALL TEAM.

The team met for practice on Saturday last at the Woodbine Park, two teams being selected. D. Menzie captained the following team: Messrs. Armstrong, Menzie, Clapperton, Pickard, World, Maxwell, Robertson, Lyndon and Thompson, while W. J. Adams captained the opposing team, consisting of Messrs. Torpy, Adams, McMullen, Cooper, Fullerton, Johnson, McPherson, Allison and J. Fullerton. After a well contested match, Captain Adams' team were declared the winners, the score being 14 to 13. W. Copping, of the City Inspection Department, acted as umpire. The president, R. Ross, pitched the first ball. We regret that a description of the game by Captain Maxwell reached us too late for insertion, but may just add that the captain and secretary have got their players under lock and key. National managers are hereby notified that the players of the Toronto Master Plumbers' Baseball Team are not for sale.

ARE THE LADIES CONSIDERED?

ONE who has attended the various annual conventions of the national associations must have observed that, while the time of the male delegates was fully taken up with business and pleasure, no provision was made to entertain the ladies who may accompany the delegates. This has resulted in reducing the number of ladies who go to the convention with the men. In looking over the report of the National Convention of the United States one notices that one of the main features of the entertainment is the attention given to the comfort and pleasure of the ladies. This is as it should be. There is very little pleasure for the ladies to go with their husbands to a strange city, while the gentlemen are engaged in the business session. Indeed, in the entertainment the ladies are at a loss to fill in the time. It appears to be the practice at the conventions across the line to appoint a committee of ladies to look after the visiting ladies. At the recent convention held in San Francisco the visitors were so well looked after that the chairman of the ladies' auxiliary, Mrs. James E. Brild, was presented with a loving cup. This was one of the most pleasing features of the convention. It is said that the ladies are a great factor in the selection of the places of meeting. While the main feature of these annual gatherings is the betterment of trade relations, interchange of thought, elevation of the profession, the strengthening of mutual confidence and the general good to all, it should also be borne in mind that most, if not all, of these aims can be better accomplished with the social side of man at his best. Toronto will possibly be chosen as the next place of meeting, and it will be the Toronto association's opportunity to create a precedent in looking after the lady visitors, and they can do it.

PLUMBING INSPECTION IMPORTANT.

THE duties of a plumbing inspector in any city are of great importance, although but little is known regarding his work except by the comparatively few people who are brought into direct contact with him in his official capacity, says the Metal Worker. His duty, primarily, is to protect citizens from the deleterious effect of sewer air, and so to aid in safe-guarding the public health. In the larger cities the functions of the plumbing inspector are clearly outlined and considerable attention is paid to their careful observance. Some difficulty, however, is occasionally experienced in towns newly provided with plumbing regulations, where their observance interferes more or less with customs which have become established. Here the value of a competent and vigilant plumbing inspector is of more than ordinary importance. There are many who are disposed to look upon the introduction of plumbing regulations as a gratuitous assumption of authority on the part of the city government, and who fancy that their evasion is a laudable act. While, in many instances, the deviations from the regulations are of comparatively small importance, yet to allow one citizen to violate them would be to invite their general disregard. This makes it necessary for the plumbing inspector to take a positive stand in insisting that the letter of the law shall be carried out, as well as the spirit. This sometimes causes friction, particularly when some individual citizen brings his influence to bear in the endeavor to secure favors to which he is not entitled. Sometimes the greatest trouble the plumbing inspector meets with comes from those plumbers who have not felt the necessity of keeping pace with progress nor realized the benefits that accrue to the community in general from the observance of the plumbing regulations and the profit that results from doing work in accordance with them. The plumber, wherever situated, will be lending substantial aid to sanitary work if he informs himself thoroughly as to the details of the local plumbing regulations and also of the various causes which have led to their adoption, and then explains their advantage to his customers, present and prospective. By this means he will be able to remove much of the opposition that is raised by his clients and at the same time prepare for the easier collection of the bills which he may have against them.

SOIL PIPE AND FITTINGS.

The following circular issued by the manufacturers of soil pipe and fittings should be well noted by the trade. The decision arrived at is a very sensible one, while it will make a difference in tendering in cities where light soil pipe may be used. The notice is long enough to enable all who have contracts on hand to complete them or make provision for same. The circular speaks for itself.

GENTLEMEN, We beg to advise you that on and after 1st January, 1904, light soil pipe and fittings will be no longer sold by us.

The reason for this action is in consequence of the fact that most of the sizes of medium soil pipe and fittings are sold at the same price as light soil pipe and fittings, and, as the principal towns and cities in Canada prohibit the use of light soil pipe and fittings, we deem it advisable to in future manufacture medium and heavy soil pipe and fittings only.

Yours truly,
Toronto Foundry Co., Limited, Toronto.
Toronto Hardware Mfg. Co., Toronto.
Stevens Manufacturing Co., London.
Warden King & Son, Limited, Montreal.

AUSTRALIAN MASTER PLUMBERS CONVENE.

The Master Plumbers of Australia held their fourth annual convention in April. The meetings were held in the Builders' Exchange Building, Brisbane, Queensland. Representatives were present from Victoria, New South Wales, Queensland and New Zealand. The convention extended over five days and was made both interesting and profitable by the reading and discussing of technical papers and subjects of practical interest to the trade. The idea of the registration system of plumbers was endorsed. Officers elected for the year were:

President, H. Neylan.
Vice-president, Hiram Wakefield.
Treasurer, Peter Fleming.
Secretary, George Hall.

The Queensland association entertained the delegates with a dinner.

BUILDING PERMITS ISSUED.

TORONTO.

A. E. Irons, seven pair semi-detached brick dwellings, south-east corner College and Margaretta streets, to cost $15,000.

S. J. Graydon, brick and stone dwelling, 161 Spadina road, to cost $4,500; also a brick and stone dwelling at 91 Spadina road, to cost $5,000.

McAlpin Tobacco Co., alterations and additions to factory, north-west corner McMurrich and McAlpin streets, to cost $2,700. Beaumont & Jarvis, architects.

John Hillock & Co., four-storey brick addition to factory, 154 George street, to cost $6,000.

Alex. McCurdy, pair semi-detached brick dwellings, west side Markham street, near Harbord street, to cost $6,000.

Walter Marks, 641 and 643 Euclid avenue, pair semi-detached brick and stone dwellings, to cost $4,000; R. M. Ogilvie, architect.

John Wighton, brick dwelling, 57 Macpherson avenue, to cost $3,500; M. Bradley, architect.

M. F. Cluff, two-storey brick dwelling, 41 Beatty avenue, to cost $4,000; M. H. Simpson, architect.

BUILDING NOTES.

Work on the new furniture factory at Elmira, Ont., has begun.

Tenders are being asked for the erection of an iron screw pile foundation for the new lighthouse at the entrance to St. Andrew's, N.B., harbor.

The C.P.R. will build a new station at Prescott in the near future. The new building will likely be up town and will necessitate a complete alteration of the present yard.

The contract has been let to Parr & Fee, for something in the neighborhood of $12,000, for the erection of a new block on Westminster avenue, Vancouver, for Stanley White. The block will be 85x50 feet, and two storeys high.

A war between the manufacturers of the new brick and the old-style makers, in London, Ont., seems eminent. The makers of the new brick have cut down their price to $6.50 per thousand, whereas the others are selling at $8. However, the makers of the old-style say they can play at the same game, and threaten to cut prices until bricks are dirt cheap if necessary. When the brick-makers fall out is the time for the brick users to make a haul.

Geo. McLagan, Stratford, Ont., is preparing to build eighteen houses between the McLagan factory and up town. Four will be frame, seven frame on stone foundations, and four brick veneered. They will be a storey and a half high. The contracts for these will be let in a few days.

There is a lively interest in building operations in Charlottetown, P.E.I. A great number of residences and other buildings are being erected. Lowe Bros. have secured the contract to install a cold storage system for The Dominion Packing Co. W. C. Harris is preparing plans for a large additional building for the packing company.

It is contemplated that five hundred new buildings, mainly residences, will be Nova Scotia Steel Co. There are some mer. A number of these are for The Nova Scotia Steel Co. There are some fine building blocks in course of erection. The Anglicans and the Baptists propose to build a new church.

PLUMBING AND HEATING NOTES.

J. H. Neelands, of Barrie, Ont., was in Toronto one day this week on business. Mr. Neelands reports business fair in Barrie; also that there are bright prospects of organizing a local association in Barrie. There is a prospect of forming a district association of Orillia, Collingwood, Barrie and Midland. Mr. Neelands is expecting to attend the convention at Montreal, making a pleasure trip of it, going by boat. Mrs. Neelands will accompany him.

An effort is being made to arrange for the Toronto delegates to take the boat trip to Montreal next week, in which case most of the delegates will be accompanied by their wives. The Home Comers' Festival taking place at the same time as the convention is affecting the interest of the delegates, as many of them have Home Comers to entertain.

D. Clark, of 21 Arthur street, Toronto, is making arrangements to take a week's holiday. He is arrgnging to have a week's fishing at Lake Scugog.

The Woodstock, Ont., Gaslight Co. will increase its capacity this summer by building a large new steel reservoir with a capacity of 200,000 cubic feet.

Lessard & Harris, Montreal, who are now building several of the new Canadian Pacific shops at Hochelaga, have also been awarded the contract for laying the water pipes connecting the shops in question.

G. Ernest Fairweather, 84 Germain street, St. John, N.B., is asking for tenders for the plumbing and heating in the new building erected for The Red Rose Tea Co.

Thos. Riley, 33 Richmond street east, Toronto, has been for years making a water tap of his own devising, one which is said to possess unique qualities. The distinguishing features of the tap are: All wearing parts can be removed without taking the tap from its position; a removable seat; washer of tap forms disk and washer combined; the spindle can be raised and closed without leakage of stream of water; tap can be repaired without shutting off the stream of water.

STOVES AND TINWARE

SETTING UP AND OPERATING STOVES.

IN many cases stoves and ranges are blamed for difficulties which are not really the fault of the stoves, but are entirely due to other causes. The Gurney Tilden Co., Limited, suggest to the trade the following directions for setting up and operating stoves:

If a stove fails to give satisfaction, it is because of having a bad chimney or being improperly set up. A stove cannot operate of itself; it must have a chimney, it must have good fuel, and it must be properly set up to do good work.

The dealer often forgets that the things that prevent the stove from working are located between the pipe collar of the stove and top of the chimney. It does not seem to occur to him that the pipe and chimney are to do the drawing.

To secure good operation in cook stoves and ranges, see (1), that the flue stopper is in place; (2), that the chimney is clear and has a good draft at pipe hole; many chimneys are made too low, and draw better when a "smoke-stack" is put on them; (3), that the pipe fits closely on the stove and in the chimney; no air should go outside of the pipe; (4), that the pipe does not go too far in the chimney; (5), that no ashes from chimney get into the end of the pipe; (6), that there are no pipe holes open on the opposite side of the chimney, either above or below, and that there is no unused stove with draft slide open, leading into the same chimney; (7), avoid having the pipe telescoped at the elbow. If you have all these parts properly adjusted and well arranged, open the direct draft damper and see if you can get a good fire in the stove, together with a strong draft. If the stove will not burn well then, the trouble is not in the stove, but above it.

If the fire burns well on the direct draft, close the oven damper. Then if it will not heat the oven well, please examine the flues and damper, and see (1), that all the flues are open and clear, so that smoke can freely pass through them. In cleaning flues many do not clean all the flues, and frequently push soot and ashes into back corners, and in that way stop them up; (2), Examine all the dampers in the flues and see that they open and close tightly and do not get out of place. Be sure that you know how they operate, so that they may not be open when you think they are closed.

It is possible that the draft of the chimney is so strong as to carry the heat so rapidly around the oven as not to be absorbed by the plates, and the oven fails to heat sufficiently from that cause. A damper in the pipe will relieve this.

HOW TO MAKE AN ACUARIUM.

A METHOD of making an aquarium is given by "R. J." to The American Artisan as follows: Prepare galvanized iron angle, say from 24 gauge iron, with equal sides, ⅝-in. or ¾ in. and cover with zinc of a good quality. This will make a light and strong bar. The top and bottom frames are to be equal in all respects. In putting the frame together make flush joints for the glass to lie close to the bards all around. When fitted together and well soldered it will be strong. The corners can be made stronger, if required, by pieces bent to shape and soldered on, or ornamental bosses may be used to suit the fancy of the maker. When the bottom, which should be of zinc, is soldered to the bottom frame put in the glass sides, which should fit nicely and be well bedded in suitable cement. The end glasses being placed and fitted closely to the sides will keep the sides in place, and by soldering a stop on top of frame at each end, the end glasses will be kept securely in place. The next requisite is a slate bottom to fit inside over the metal bottom and against the glass, and should be well cemented on all sides. A ½ in. hole should be drilled in the centre of the slate, through which to draw off the water when desired. The pipe may be stopped by a cork or may have a faucet attached.

The aquarium may be made simply a plain rectangular box, with or without ornaments at the corners. It will be seen that when constructed as above described, the water comes in contact with glass and slate only and cannot be contaminated by metallic poison. Never use red or white lead in an aquarium.

A Request to Readers of This Page.

Dear Sir,—At the request of many readers of HARDWARE AND METAL, we have added a department devoted exclusively to heating goods and tinware. As we desire to make this department as newsy, interesting and valuable as possible to both HARDWARE AND METAL readers and our advertisers, we would appreciate any news you may have from time to time.

We would particularly like to receive information regarding:

1. New designs or pattern names of stoves, ranges, furnaces, cornices, tinware, enamelware, metallic roofing, etc.
2. Changes in or addition to factory or plant.
3. Appointment of travellers to represent jobbing houses.
4. Names of retailers starting in stove and tinware business.
5. Good methods of doing tinsmithing, roofing, etc.

We would appreciate articles from either retailers or our advertisers on such topics as:

1. How to increase stove sales, how to follow up furnace trade.
2. Designs from the tinshop and how they are made.
3. Metalic roofing and ceilings: how to make the most of the demand for these goods.
4. How to handle tinware, polishes, stove-bricks, etc., to best advantage.

Any questions asked regarding any matter relating to this trade will be most cheerfully and carefully answered.

If the trade will kindly co-operate with us, we feel assured that this department in our paper can be made of much value to both the wholesale and retail heating goods and tinware trades.

HARDWARE AND METAL.

NOTES OF THE TRADE.

The D. Moore Co., stove manufacturers, Hamilton, Ont., are about to meet the present wave of prosperity by erecting new moulding shops and increasing their capacity by 50 per cent.

The Norton Manufacturing Co., Hamilton, Ont., are making tin cans of various shapes and sizes at the rate of about 150,000 per day.

The cold blast lantern manufactured by E. T. Wright & Company, Hamilton, Ont., this year, has caused considerable comment among hardware dealers. It is thoroughly up to date, having all the latest improvements. Dealers throughout the country will do well to see the lantern before purchasing.

The Imperial Elevator Co., of Minneapolis, are making preparations to build a large grain elevator at Russell, Man. The sand, stones and part of the lumber is already on the ground.

Alexander & Law Bros., Brandon, Man., are building an elevator at Yeoman's Siding, Man.

Taxes and Regulations for Foreign Commercial Agents

By J. F. MONAGHAN, U. S. Consul at Chemnitz, Germany.

THROUGH the instrumentality of the German Union of Travelling Agents, a pamphlet has been published containing a summary of the main duties and privileges of commercial agents travelling in foreign countries was recently put upon the market. The following facts, taken from the book, will be of interest to American business men connected with the foreign trade:

DENMARK.

In Denmark, travelling agents are required to pay an annual tax of 160 crowns ($42.88). In case these agents represent more than one house, they are required to pay the full tax of 160 crowns for the first house and 80 crowns ($21.44) for every other house represented. This tax must be paid immediately upon arrival at the first custom-house of the country. An identification, both business and personal, is required, and for this purpose a notarially certified copy of the agent's power of attorney, visaed by some Danish consulate, is considered most practicable. The receipt given upon payment of the above named tax must be presented for indorsement to the police and the tax authorities of each locality in which the agent transacts business. Samples and patterns are subject to duty on entry into the country, but this is refunded upon departure. Evasions of the regulations are punishable by heavy money penalties.

FRANCE.

France requires nothing but a business passport, which properly identifies the bearer, both as to person and as the representative of a firm, and qualifies him to do business. There is no special tax. The duty on samples must be paid or proper security given therefor; upon departure from the country this is refunded or the security cancelled.

ENGLAND.

England, according to the publication above referred to, as the classic land of free trade, throws no obstacles in the path of the foreign commercial traveller. He is welcome to come, welcome to stay, welcome to transact his business, and welcome to leave when he is done. No duties increase his expenses and no customs regulations delay his travel.

THE NETHERLANDS.

In the Netherlands, the commercial agent must report to the first custom-house which he comes to and have an industrial tax receipt made out in his name (billet van de bedryfs-belasting), at a cost of 15 gulden ($6). A transit pass (no fee) must be applied for, to accompany samples. These are separately labelled and entered, and as security for their return, or for the payment of the full duty in case they are sold in the country, a deposit of 25 per cent. of their market value is required. In case any samples are sold, the regular duty must be paid upon the whole lot.

NORWAY.

Norway prescribes the issuance of a trade pass good for 30 days and costing 100 crowns ($26.80). In every locality where business is to be transacted this pass must be presented to the police authorities to be visaed and indorsed. In the absence of such certification, a "sojourn book" is required. Full duties must be paid on all samples entered, but these are refunded on leaving the country, if proper evidence can be presented that the samples were originally entered and appraised. Violations of the regulations are punishable by a fine ranging from 100 to 500 crowns ($26.80 to $184).

AUSTRIA.

In Austria, all travelling agents who can produce proper trade licenses and identifications are admitted to the country without payment of any duty, though samples sold in the country are dutiable when the agent leaves; nor are the agents subject to any other tax. Commercial agents also enjoy preferential baggage rates on the Austrian railroads, if they can produce a trade or identification card issued by the Austrian authorities. The rates in such cases are 2 heller (0.2 cent.) per 10 kilograms (22lb.) for every kilometer (0.62137 mile) travelled.

SWEDEN AND NORWAY.

In Sweden, as in Norway, the agent is required to take out a trade pass, which costs 100 crowns ($26.80) and is valid for 30 days. A receipt for this tax must be produced at all places where business is to be transacted. Inability to produce such a receipt subjects the agent to a fine of from $26.80 to $184. The regulations are said to be most stringently enforced, and their closest observance is advised. On entering samples, the regular duty must be paid; upon departure, this duty is refunded, providing all samples entered can be produced.

SWITZERLAND.

In Switzerland, a business passport showing qualifications to engage in the trade, and serving as identification, is alone required. Upon presentation of this passport to the Swiss authorities, a special passport is issued by them—free of charge—which is sufficient for all trade purposes in the country. No duty is imposed upon samples, provided their full identity can be established.

RUSSIA.

In Russia, a Government and property tax of 150 rubles ($77.25) is imposed in case of the establishment of a commercial house, and in addition a communal tax of 45 rubles ($23.17). In the case of single commercial agents, a trade tax of 50 rubles ($25.75) is imposed, and a communal tax of 10 rubles ($5.15) in addition. The Russian regulations respecting foreign commercial agents are very strongly prejudicial to Jews. Agents or commercial houses of this nationality are required to pay, instead of a Government tax of 150 rubles as given above, a tax of 500 rubles ($257.50) in addition to the communal tax. These taxes are paid against a receipt, which is valid until January of the next year and is sewed on to the traveller's general passport. A trade or business pass is also required, showing that the agent possesses full power to represent the firm. If the head of a commercial house comes to Russia and opens up trade, he is subject to a tax of 150 rubles ($77.25) in case he establishes no permanent offices, magazines, or stock rooms. In case he does establish permanent offices, he is required to pay a tax of 500 rubles ($257.50) if he conducts a wholesale business and 450 rubles ($231.75) if he carries on a retail trade. Jews are required to pay the full tax of 500 rubles in either case.

Letters from Buenos Ayres report an increasing demand there for mining, refrigerating, dairying and baling machinery.

IMPERIALISM AND WIND ENGINES.

The Imperial colonial policy of Mr. Chamberlain is at present a burning question and The Ontario Wind Engine & Pump Co. inform "Hardware and Metal" that they have received great benefit in their foreign trade by the fact that trade follows the flag.

Since peace has been proclaimed in South Africa they have opened a promising trade there. In other British possessions their goods have been introduced, and they have established themselves, due to a great extent, to the British connection.

This firm took no part in the recent windmill test in London, England, as their entire attention is being taken with filling orders both for home and foreign trade.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITISISM

NOTE. Herein are discussed the principles and practice of advertising. Subscribers are invited to send Mr. Lydiatt specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

Edited by

W. Arthur Lydiatt,

TORONTO.

DON'T GET DISCOURAGED—TRY TELLING THE TRUTH.

A MERCHANT who had been in the habit of turning his goods over once a year and marking them at a margin of 25 per cent., decided that with a closer margin he could turn them over more rapidly.

He cut the margin accordingly—bought carefully—advertised—sold rapidly.

At the end of the year, on a margin of ten per cent., he found he had turned his stock nearly six times, and that his net profit for the year was 58 per cent.

It took a little harder work to keep the stock moving, more care to buy just what the people most wanted, and caused him a little extra anxiety with reference to keeping the stock up to the top notch.

But people soon learned that his goods were always new—that his stock was always fresh—that they could save a little on purchases made at his store, because of the lower margin of profit, and be a great deal better satisfied with what they bought. They were always sure, too, of getting the worth of the money spent in his store.

It is certainly much the best policy to mark goods at a margin that will make them sell readily—that will turn the stock over quickly—than to keep up the margin of profit and have the sales drag.

No merchant is justified in selling goods so close as to afford no profit for his investment, but he is foolish to permit a desire for a large margin of profit to interfere with the rapid turning of his stock.

COMING!

Hot weather flies and mosquitoes. Keep your home cool and comfortable by using our

Screen Doors and Windows

We have several different styles at popular prices. Call and inspect them.

FARWELL & CO.,

Phone 224 Queen St. West

We have heard considerable discussion on the subject of advertising increasing the cost of doing business.

It does and it doesn't.

Just depends on the kind of advertising.

Good advertising does not make goods more expensive. It lowers the cost of doing business. If it does not do this it is not good advertising.

The largest and most successful advertisers say that if they did not do so much advertising—and do it so well—their prices would have to be much higher.

A proposition to increase advertising expenditure—or to do better advertising—in order to lower prices, would be more

COMING

The Warm Weather

Hardware, Stoves and Ranges

Screen Doors and Window Screens

—AT—

FARWELL & CO.,

Phone 224 Queen St. West.

practical than a proposition to do less advertising in order to cut down expenses, and thus be able to lower prices.

It's a matter of percentage.

Suppose, for instance, you are doing a business of $1,000 a month, and that your expenses are $250, which is 25 per cent. of your sales.

You wish to increase your business, and decide to advertise.

You decide on an expenditure for this purpose of $75 a month. Your expenses are then increased to $325.

By this expenditure, let us suppose, you are able to increase your sales to $1,300, and, at this rate your advertising expenses added would amount to the same percentage as before, namely 25 per cent.

You have not increased the percentage of your expenses and have sold $300 more goods, so that if your net profit was 5 per cent, you have increased your net earnings $15.

And the amount I have named for advertising should bring even larger results, which would add to the net profit.

If, then, a proper amount of advertising will serve to help you turn over your stock oftener—and if it be good enough to bring sufficient results to make a larger profit in the turning over—doesn't it seem wise to do the requisite advertising?

The ads. of Farwell & Co., here reproduced, are not unusual.

The announcement that the warm weather is coming is hardly necessary.

People who are old enough to need refrigerators and screen doors know what to expect in June, July and August. I don't think it's even necessary to remind them.

Much better to remind the good housewife of the many advantages and comforts that come from the possession of a refrigerator, or by having the house equipped with screen doors and windows.

Like this for instance:

Keep Your Food Healthy

and fresh during the hot summer days.

Keep the milk sweet, and the butter cool.

It's only possible with a refrigerator.

So get a refrigerator.

The —— which we handle, built as sanitary experts decree, are perfect models.

Large, "roomy" affairs; ample food and ice compartments; maintain free air circulation throughout; easily kept clean.

Economical, too. Give maximum of chill from the minimum of ice.

They're not expensive.

Come—look at them any time.

KEEP, COOL & CO., - ICELAND

Notice the line "You can procure them, also a full line of up-to-date Hardware, Stoves and Ranges, Screen Doors and Window Screens."

Isn't it a little thoughtless to say anything like that in a retail hardware dealer's advertisement? Who but a dealer would want a "full line" of such goods?

There are lots of interesting things to be said about refrigerators, stoves, screen doors, etc., without falling back on general remarks.

INDUSTRIAL GOSSIP

WOODSTOCK, N.B., is about to submit to vote a by-law for granting a bonus of $5,000 to assist in the establishment of a furniture factory there.

A pulp and paper mill in course of erection at Sturgeon Falls, Ont., will employ 500 hands.

The Canadian Steel & Wire Co., Hamilton, Ont., report active demand for Ellwood wire fencing they are turning out.

The Canada Felting Co., Ltd., St. Jacobs, Ont., have been incorporated with $50,000 capital, to manufacture felt fabrics of various kinds.

The C.P.R. will build a new up-town station at Prescott, Ont., in the near future, necessitating a complete alteration of the present yard.

J. I. Hartt has purchased the saw mill of J. Cook, North Orillia, Ont., together with the timber in connection with the mill, and all last year's cut.

The Meriden Britannia Co., Hamilton, Ont., are making some alterations in their premises, Wellington street east, with a view to provide increased accommodation.

R. Mitchell & Co. have purchased a block of land 600x180 ft. in St. Henri, Que., and will erect a large manufacturing establishment thereon during the present year.

Chadwick Bros., brass founders, Hamilton, Ont., are finding an increasing demand for church furnishings. They are at present turning out a couple of eagles for reading desks.

Turnbull & McManus, lumber dealers, Winnipeg, have purchased the site of Immigration Hall, No. 3, where the Doukhobors were housed, and will erect a warehouse thereon.

The Canadian Pacific Railroad has absorbed the Canadian Pacific Navigation Company, taking over its fourteen steam ships plying between Victoria, Skagway and other points.

The Rochester Germicide Co., incorporated in New York, has been licensed to do business in Ontario; capital $15,000; to manufacture and deal in disinfectants and disinfecting devices.

The Algoma Builders' Supplies Co., Ltd., Port Arthur, Ont., have been incorporated with $40,000 capital, to manufacture and deal in building materials and to do a general contracting business.

The Telford & Chapman Mfg. Co., Rock Island, Que., makers of horse blankets, sweat pads, etc., intend erecting a new building in the near future to accommodate their rapidly increasing trade.

In consequence of the continued enhanced price of crude rubber, the leading British manufacturers announce an advance of 10 per cent. in the price of all mechanical rubber goods, to take effect from the 12th ult.

The Barrie Shoe Co., Ltd., Barrie, Ont., have been incorporated, with $40,000 capital, to manufacture boots, shoes, rubbers, etc. The directors are J. C. Irwin, A. Milne, James Vair, D. H. Ellis and Thos. Beecroft, all of Barrie.

John Fisher & Son, Ltd., Dundas, Ont., have been incorporated to take over the business of John Fisher & Son, and to manufacture paper, pulp, cordage, yarns and machinery for manufacture of these goods. The capital is placed at $200,000.

The Laurentide Pulp Co., Ltd., Montreal, have been authorized to increase their capital from $1,600,000 to $2,800,000; to change their name to The Laurentide Paper Co., Ltd.; and to acquire, equip and operate lumber and paper mills, warehouses, etc.

The Rainy Lake Pulp and Paper Co., Ltd., Toronto, have been incorporated with $500,000 capital, to manufacture pulp-wood, woodenware and paper; directors, Wm. Blackford and Robt. Mills, Winnipeg; Hon. G. E. Foster and W. J. Elliott, Toronto; W. A. Preston and Louis Hamel, Mine Centre, Ont.

The Davidson & Thackray sash and door firm, Ottawa, Ont., who were recently burned out, will rebuild. The new factory, which will be one of the largest establishments of its kind in the world, will be built on an isolated property and not in the central portion of the city as before.

The industrial establishments of Brantford, Ont., are sharing in the general prosperity. The Adams Wagon Co. have taken steps to make a big addition to their works, which will give employment to many more men. The Waterous Engine Works will also enlarge their plant in the near future, while the Massey-Harris Co. have purchased more land close to their Brantford works and it is said that their plant at this point will be enlarged.

Recently a deputation from The Canadian Lake and Navigation Company, headed by E. A. Kemp, M.P., waited on the Board of Control of the city of Toronto, to see if some arrangement could not be made so that the boats of the company, plying between Montreal and Fort William, might call at Toronto. The eastern passage would have to be kept dredged and also the harbor. A freight shed might be erected on the end of Bay street dock. City Engineer Rust says that if the Government kept the eastern channel open, it would not be a very great matter to keep the proper depth of water in the harbor. Engineer Rust was instructed to make an estimate of the cost of the proposed shed.

SHEET IRON AND STEEL

We have twenty different Works, and make all varieties of sheets.

There is but one Apollo; but one Patent Planished; one Wellsville Polished.

Quick service.

Return a whole sheet for an inch of fault.

American Sheet Steel Company
Battery Park New York

If you want to sell a FIRST-CLASS RAZOR, concaved by the best grinders in the world,

H. Boker & Co.'s "ROYAL CANADIAN"

is the thing. No line will give you better satisfaction.

CURRENT MARKET QUOTATIONS.

June 26, 1903.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

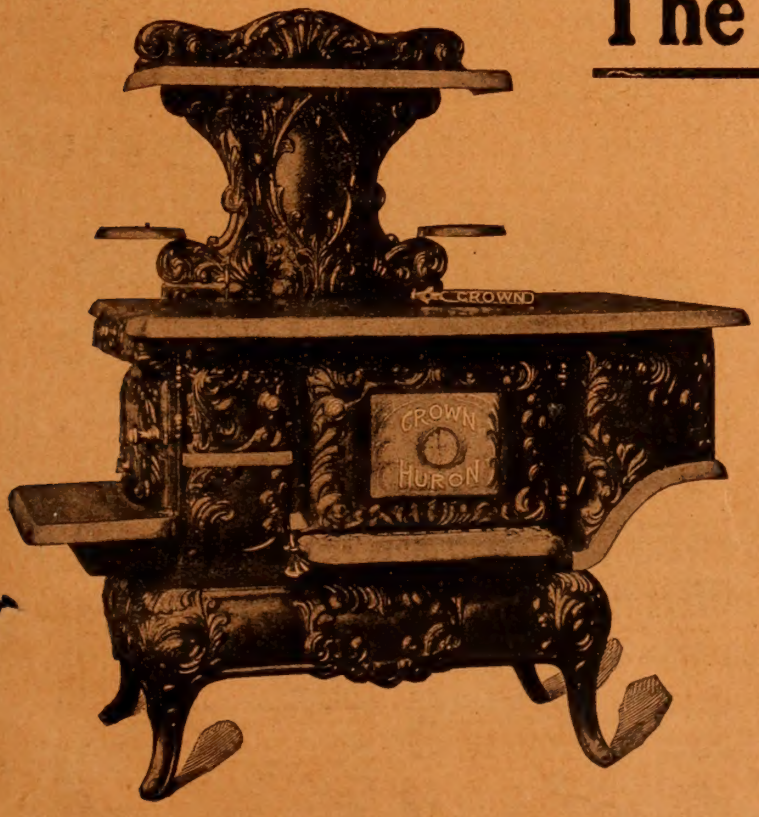
For sale by ALL PROMINENT CANADIAN HARDWARE JOBBERS.

"QUALITY FIRST AND ALWAYS."



The Ranks of Every Business

are crowded. But at the top there is always room for those who can show their right to be there.

This applies to the stove business as well as any other.

We are amongst those who are at the top. Why? Because our **"HURON"** line of Stoves and Ranges are modern, are made right, from best materials, by skilled union men, and are moderate in price.

Every line a specialty that sells itself.
